Hello friends, it's time to launch the 3rd rocket. Today, I will bring you a set of 3 variations of a simple rocket.

Yet with the same base and some minor and unexpected inspiration over the "Bird" base, I've managed to create a total of 3 different rockets. Starting from the first of the 3 with a pointed 3-D fuselage to an oblique 3-D fuselage. Also here, the colored folds and the white ones are the same, but the colored ones are not always on the same layer. The intermediate fuselage variation is the "3-D" one, probably somewhat the simplest of the 3 variations. Finally, the last variation is the one with the oblique fuselage. Also, the latter, counting a total of 4 layers (compared to counting a total of 2 layers for the 3-D one), is the one that I like the most. Also, the latter is the one that I've chosen for the finishing touches (coloring, base, etc.). As mentioned, all these 3 variations are inspired by the aforementioned "Bird" base.

Happy folding!
