[Daily fish] Whale

Original Syn is also **origami daily** 2019-08-14

Touch fish everyday works except special statement

It was **Syn** himself.

A square is not cut or cut

Real shot jumping is normal

Consultation after tutoring

Hello friends, today I will take you to touch one of the largest fishes (there is a fish in the knowledge name, actually a mammal)-a whale.

"

> From an anatomical point of view, many characteristics of cetaceans show a high degree of adaptation to life in the ocean. However, anatomical evidence is not enough to answer many questions about the origin of cetaceans. However, from a biochemical and genetic perspective, cetaceans are closer to ungulates, and fossil records (about 50 million years ago) also support cetaceans evolved from ungulates.
>
> The ancestors of cetaceans are most likely terrestrial ungulates in North America, Europe, and Asia-Mesonychidae. Some members of the middle claws are as petite as domestic dogs, and some are as tall as bears, but many animals have evolved from small to large, so cetaceans may have evolved from small middle claws. According to speculation, there are not many of these teeth. The middle claws fishing in shallow waters have gradually transformed into various whale and dolphin during the long evolution process after gradually transforming into the amphibious life form.

"

The actual shooting paper is muji, and the recommended paper is 15 ~ 25cm. The yield is very high, about 0.7, and the shaping will be more pit. The actual shooting starts:
