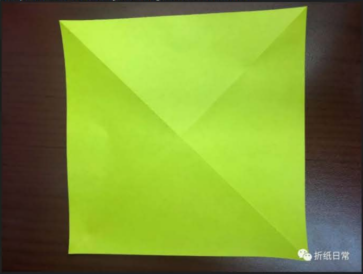
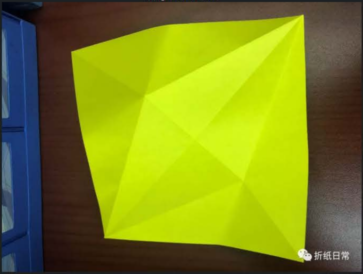
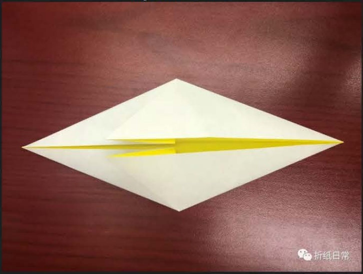
Good evening everyone, everyone. Today I bring you a real shot of Thundercloud. It is recommended to use 15 ~ 25CM paper. The direction of the picture is still not adjusted. Figure Read this article



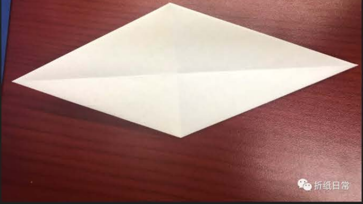
Diagonal crease



Angle bisector creases

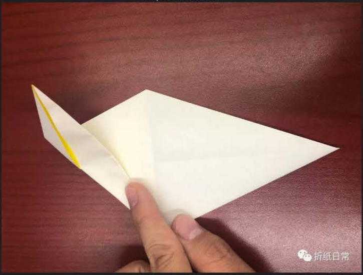


Basic fish



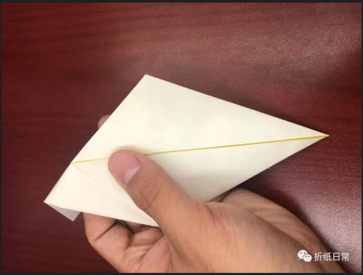
折纸日常

Flip to the back



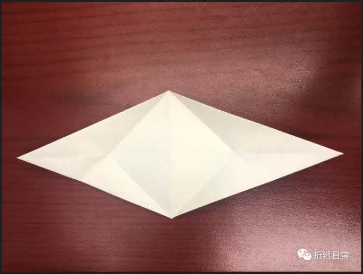
折纸日常

Make a valley fold along the hypotenuse of the isosceles right triangle on the back



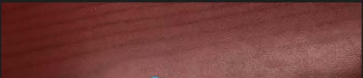
折纸日常

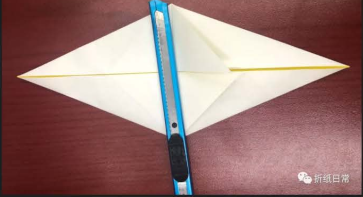
Back effect



折纸日常

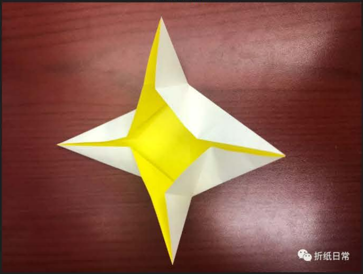
Four corners are the same





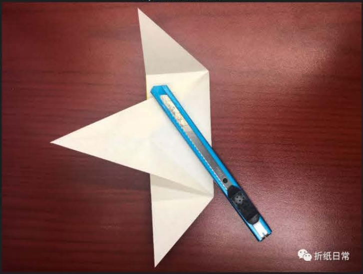
折纸日常

Back to front



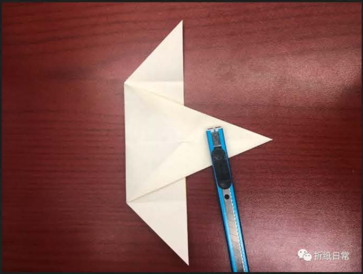
折纸日常

Open two corners



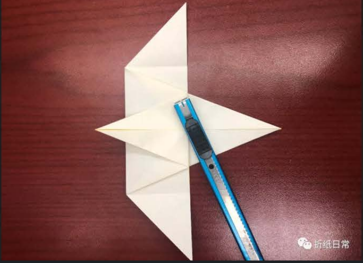
折纸日常

To flatten

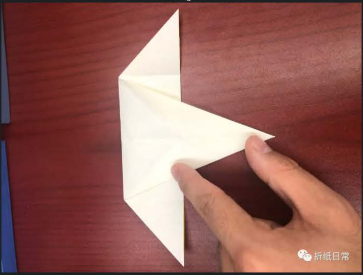


折纸日常

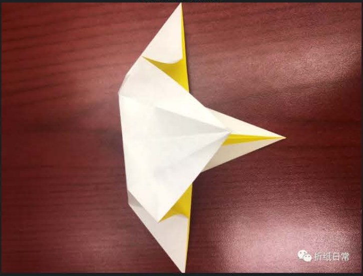
Rotate 180 °



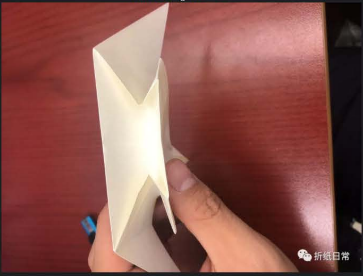
Trough



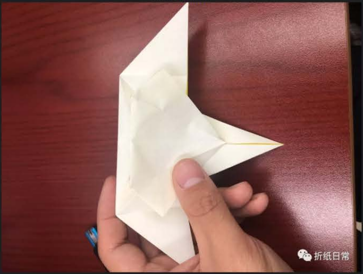
Observe the crease



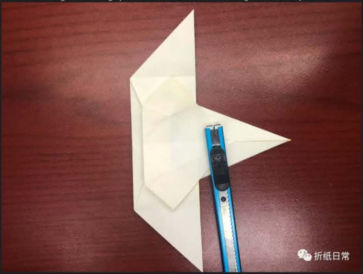
Unfold along the crease



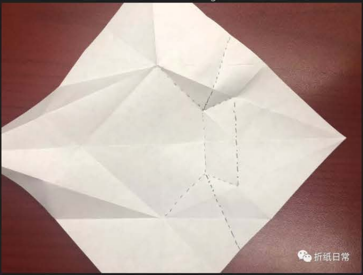
Flatten down



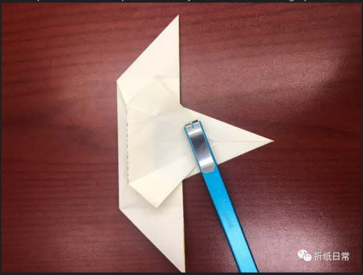
During flattening, please refer to the following reference points



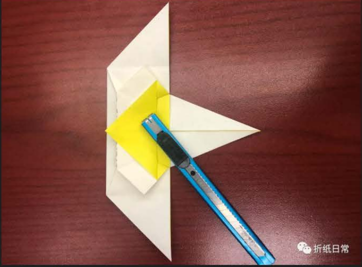
After flattening



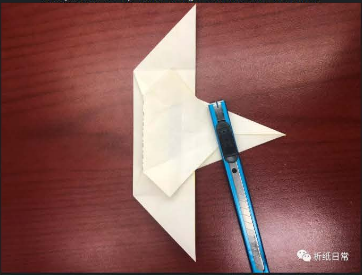
The picture shows the peak and valley lines of the flattening operation.



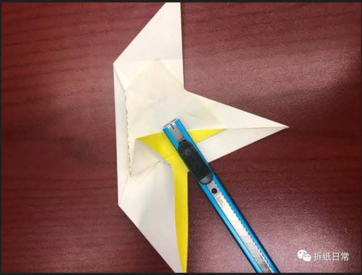
Back to finished product



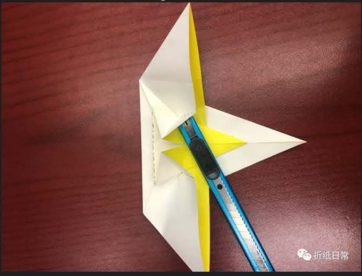
Valley break, the tip of the triangle coincides with the vertex



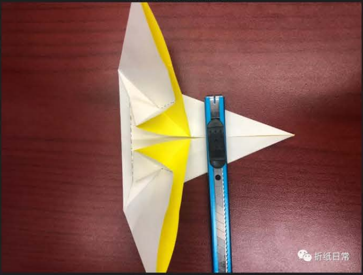
Turn back



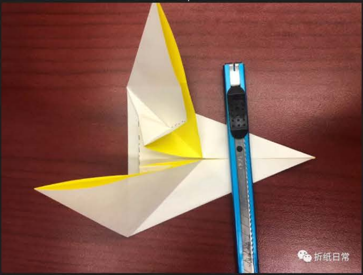
Angle bisector



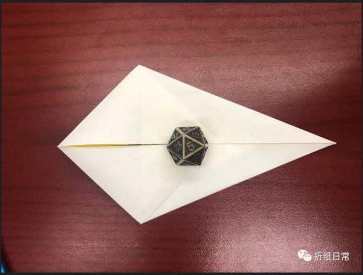
Same on the other side



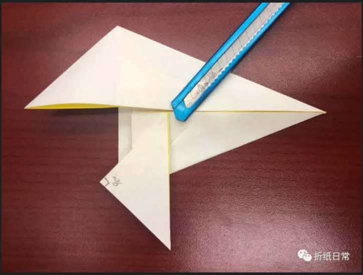
Tuck the tip inside



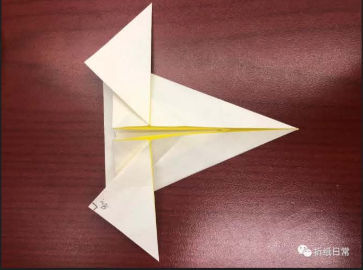
To flatten



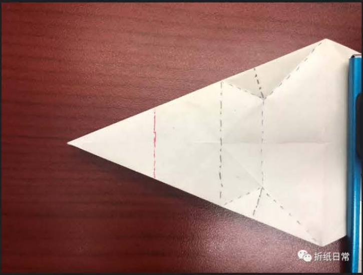
Same sides



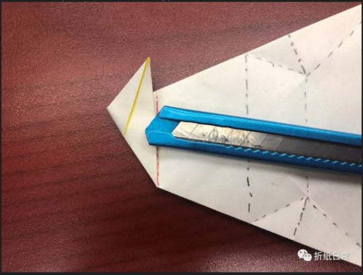
Make a 45 ° trough along the root



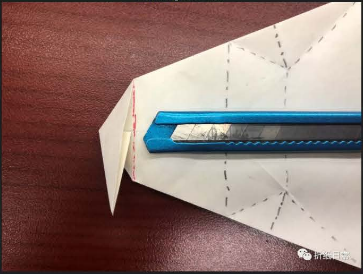
Same sides



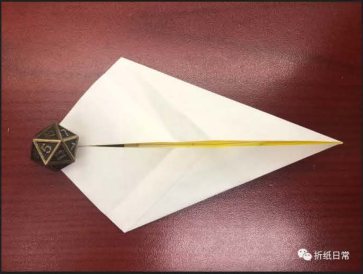
Open to the fish basic type, the red line is a fold in half



Make angle bisector

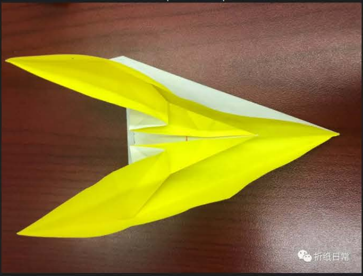


To flatten



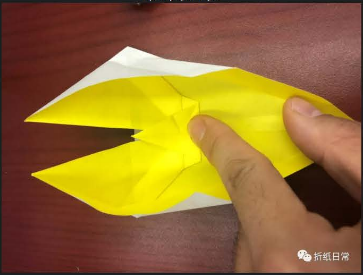
折纸日常

Back to previous steps



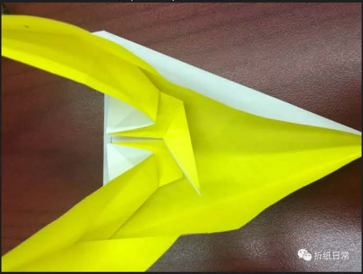
折纸日常

Open paper layer



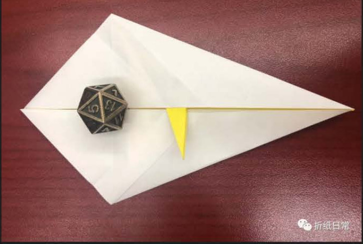
折纸日常

Repeat the previous crease

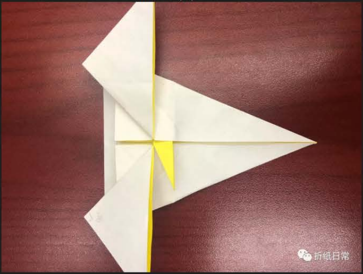


折纸日常

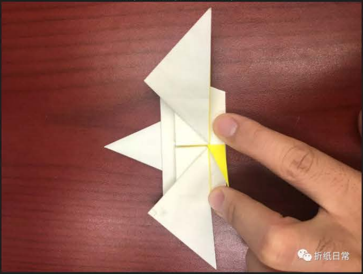
After polymerization



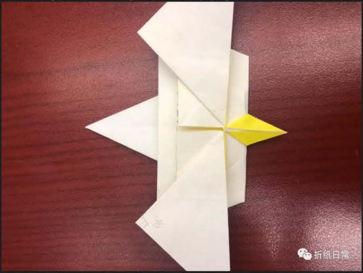
Cover the paper back



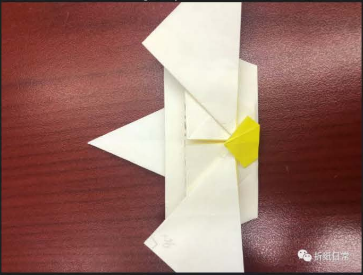
Repeat the previous steps



Fold along the root of the yellow branch, paying attention to the centerline

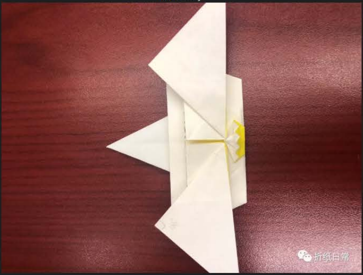


Dealing with yellow branches



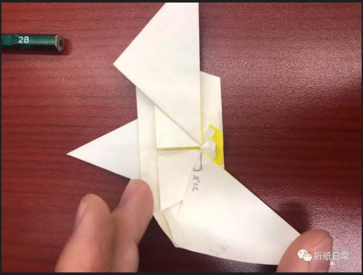
折纸日常

Pull away



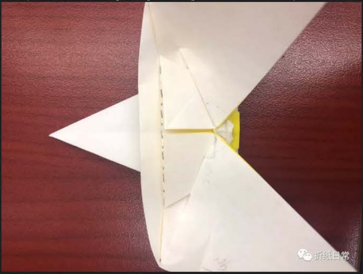
折纸日常

Fold the mouth and teeth



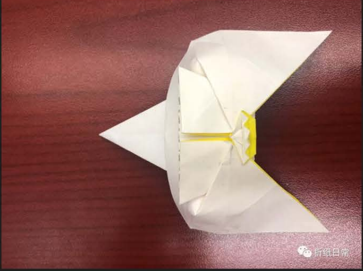
折纸日常

Open the isosceles right-angled triangle and make a 22.5 ° peak break

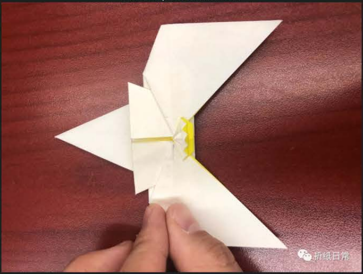


折纸日常

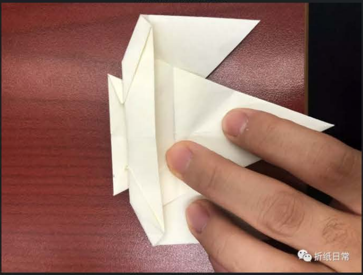
Same on the other side



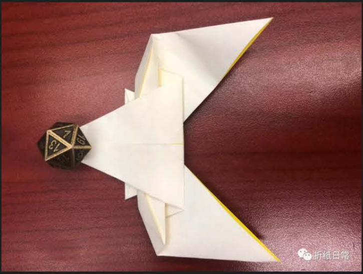
Make depressions convex



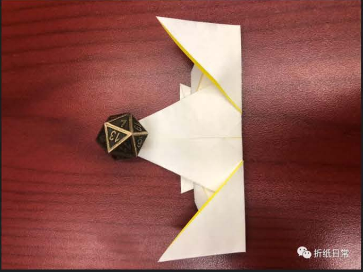
Flatten on the back



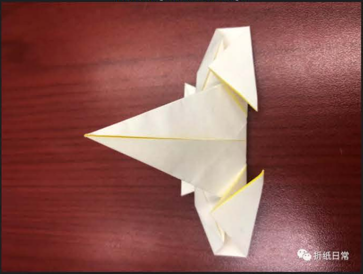
Back as shown



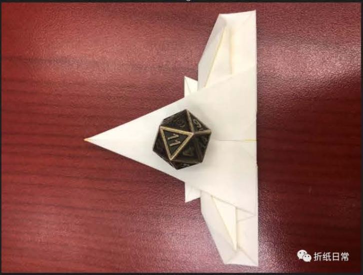
Fold the sharp corners back



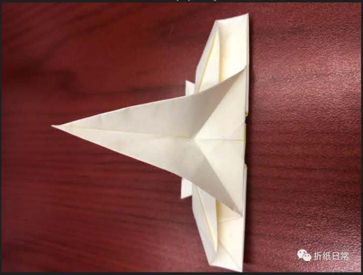
Fold along the bottom edge



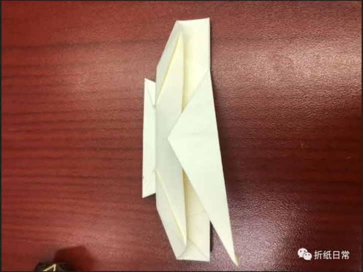
Trough



Hide the paper layer

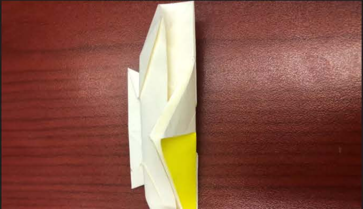


Make an angle bisector, similar to mouth



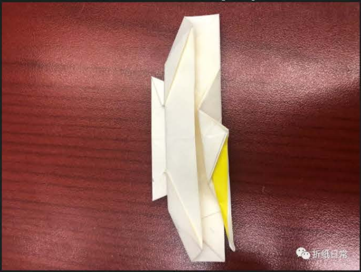
折纸日常

Turn the inner paper layer to the outside



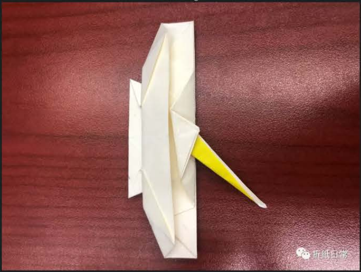
折纸日常

Refine branches and do lightning



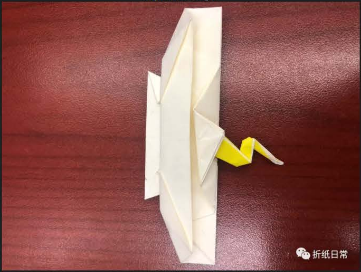
折纸日常

Refining



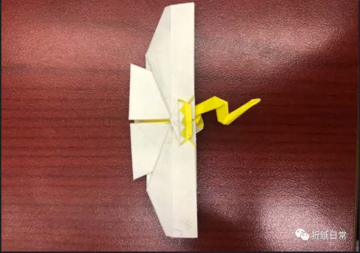
折纸日常

Adjust the angle

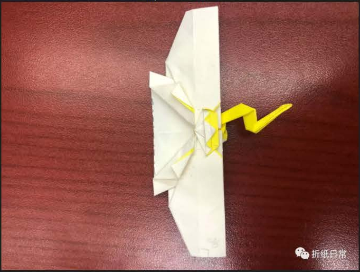


折纸日常

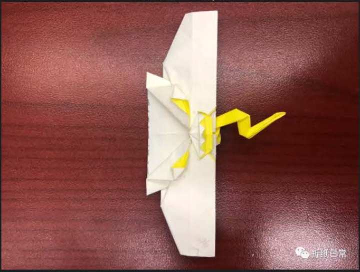
Double inversion



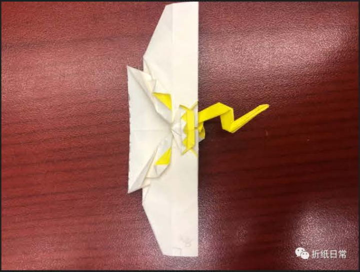
Flip to the front



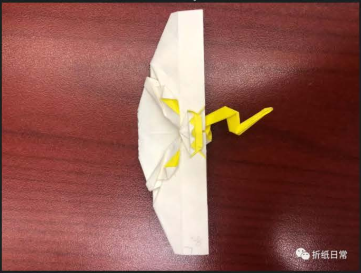
Duan Zhe make eyes



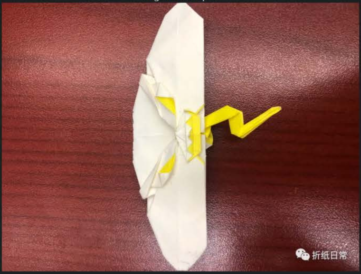
Open the paper layer



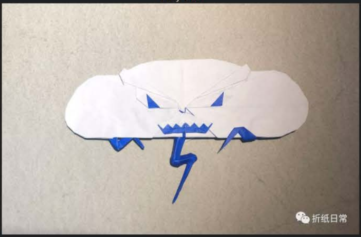
Guzhe make eyebrows



Organize shapes



carry out.



Attach three different shapes of clouds, please play freely with friends you like
