CP Sharing Series NO.06 Mid-term Examination for the 27th Insect CP

Origami students Takayama CP origami opening number2018-04-26

In this issue, we have another little beetle

The original author of this work, please forgive me, I don't know, but there is a reason for this work as a period.

First, this work can be used as a summary after talking about several beetles. It can also be used as a mid-term test to give you tips on shaping.

Second, if you are really serious about making origami with me every time, you should fold it out effortlessly in this issue. Therefore, in this issue, there are only real shots and no introduction of CP auxiliary lines, which can be regarded as a test and inspection for everyone.

At the end, we will give the mid-term exam questions for our CP Beetle!

You can try it out based on our studies, or the sentence: Look forward to your finished product!

A reward has been set up for this assignment!

The only one is the first prize and the prize is a wired insect CP (I chose it)

The way to submit the homework picture is to add me on WeChat and then privately on WeChat, as of August 1, 2018.

Let's meet today's little beetle.

Here, although no text has been added, if you have carefully read my introduction to the two-phase beetles, you should be able to understand these real shots, at least also understand which line I gathered and what step I did.

Let 's talk briefly about shaping. The shaping of this beetle is the same as most insects.
The first step is to distinguish the branches. No matter what works, the branches must be divided first. This is easier for insect works, and the most difficult for character works. It is necessary to find each part. Below we divide the branches. .
The second step is to separate the joints. The head, chest, and abdomen must be clear. Which leg is in which part must be divided. If it can be folded, it should be folded. If there is a need to handle the sharp corners, it should also be handled.
The third step is to add glue. I personally prefer to start with the head, then the joints, and finally the legs.

midterm

How about it, and this issue is closely related to the topic!

For the sake of fairness, I hope that those who want to submit pictures use black or brown paper uniformly. Do not upload other colors. The paper size is uniformly 35 cm paper. Please submit your work with a ruler when you hand in your homework. Take photos together (or other way to verify the size of the finished product)

Finally remind everyone, be sure to fold!
