Origami Sharing Series No.27 Total 83rd Issue Beginning Number 01

Origami student Takayama CP origami opening number2019-02-05

Hello everyone, welcome to CP Opening!
For the first year of the new year, let's say goodbye to all those who love CP origami!
I wish you all the best in the year of the pig and good luck in pigs!

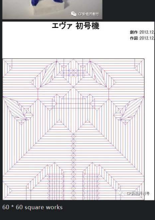

Talk about this issue: the first number (first number)
The first model (EVANGELION) was put into actual combat EVA combat test simulation type for the first time.
In the purple-painted armor, there is a living body similar to the apostle, and there is a sphere similar to the apostle's core on the chest. The marvelous relationship between it and Shinji, and the surprising combat effectiveness it exhibited during the runaway were particularly noticeable. After the annihilation of the fourteenth apostle, the first machine that has been preserved intact has also been added to the theater version. It is the core model of the EVA series and a component of the Dead Sea Instrument.

In "New Century Evangelion", EVA is the main humanoid decisive weapon. EVA was created by NERV to protect the third new Tokyo city from apostolic attacks, thereby completing the human replenishment program. In the TV version and the old theater version, there are a total of 5 EVA official bodies except for the mass production type, and it has increased to 10 in the new theater version.
Divided into trial-prototype, prototype, standard machine, production machine, and Mark series (and a part of the disputed non-human body).
"EVA New Theater Edition Q", released on November 17, 2012, is the third part of "EVA" New Theater Edition. In the previous "Preface" and "Broken" two theatrical editions, the zero machine was boarded by Li Boli The first machine was boarded by 碇真嗣, the second machine was boarded by Asuka and Maki Hippo, the third machine was boarded by Asuka, the fourth machine was unmanned, the fifth machine was boarded by Makibo, and the sixth machine was boarded by Ayaka. No. 8 was taken by Zhen Xibo, No. 9 was taken by Li Boli, and No. 13 was taken by Ji Shinji and Yan Xun. Among them, No. 0, No. 3, No. 4 and No. 5 were damaged, and No. 2 It is also in a semi-bad state.
Although EVA is regarded as a huge humanoid robot, EVA belongs to the category of neuromechanics, mainly biological, and also has a solid mechanical structure and armor coating. This armor is nearly fully protected against conventional weapons, but has different effects when attacking an apostle. At the end of the New Century Evangelion, it was shown that almost all of the EVA was made with reference to the first apostle Adam, except for the zero and first machines, the zero and first machines refer to the second apostle Lilith. At the same time, the use of armor is also apparent, it is used to maintain and control the movement of EVA (restrainer).

Want to learn more? Please see the original book!

Let's find out about the works in this issue! (Because I don't know who the original author is, please leave a message to me who knows it)

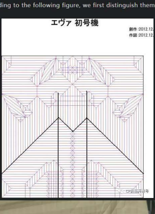

60 * 60 square works

The first step is to ask everyone to check the grid, wire, expand, and prepare to converge!

First of all, according to the following figure, we first distinguish them according to the black line.

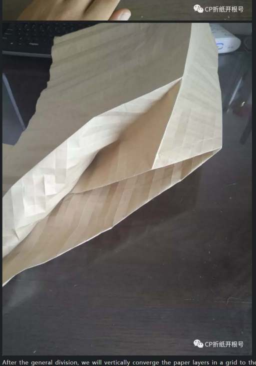

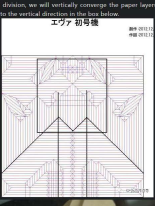

After the general division, we will vertically converge the paper layers in a grid to the center according to the vertical direction in the box below.

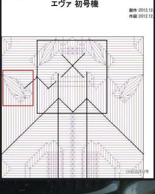

Below we are following the picture, first locate by oblique cross in the black box in the picture, and then aggregate to the sides

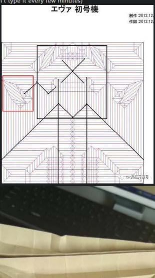

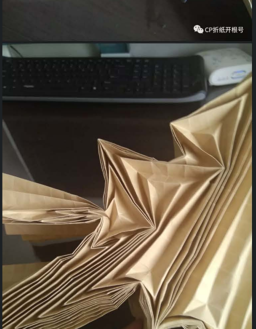

When converging to the two sides, we pay attention to the lines in the red frame. Here is a common way to change the direction, please take notes by yourself! (My keyboard is dying, and I can't type it every few minutes)

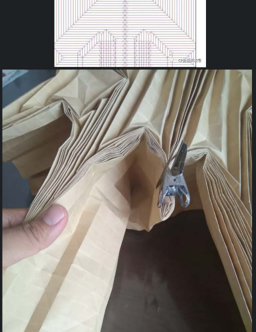

Next, we have to look at the picture above, because we define the bottom, and then aggregate the top head. According to the following picture, we first process the lines inside the small box, then the lines in the large box below, and finally converge to the sides.

Pull apart and then aggregate

The following figure, everyone should pay attention to the opened paper layer

Below, here is a multi-paper layer integration, which has been said in many issues, please look at the picture here

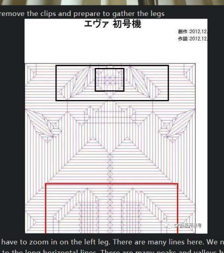

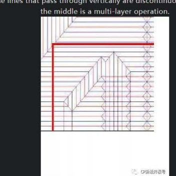

Finally we remove the clips and prepare to gather the legs

Here we have to zoom in on the left leg. There are many lines here. We need to pay attention to the long horizontal lines. There are many peaks and valleys here that are long lines. The lines that pass through vertically are discontinuous. The small square in the middle is a multi-layer operation.

The following figure is the operation of horizontal and vertical

Start on the other side

It's over here. I believe that everyone has a different understanding for this work. I also think that plastic surgery should not be shaped into one, so I will simply sort it out.

The relationship between time is very simple. Please arrange your chest and abdomen first, then your head, and your hind limbs.

Well,
That's it for this issue!
See you next time!
