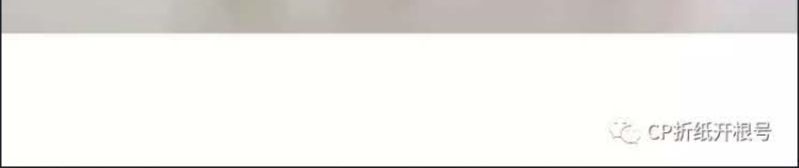
Origami Interactive Series NO.03 Total 25th Hippo CP

Origami student Takayama CP origami opening number2018-04-05

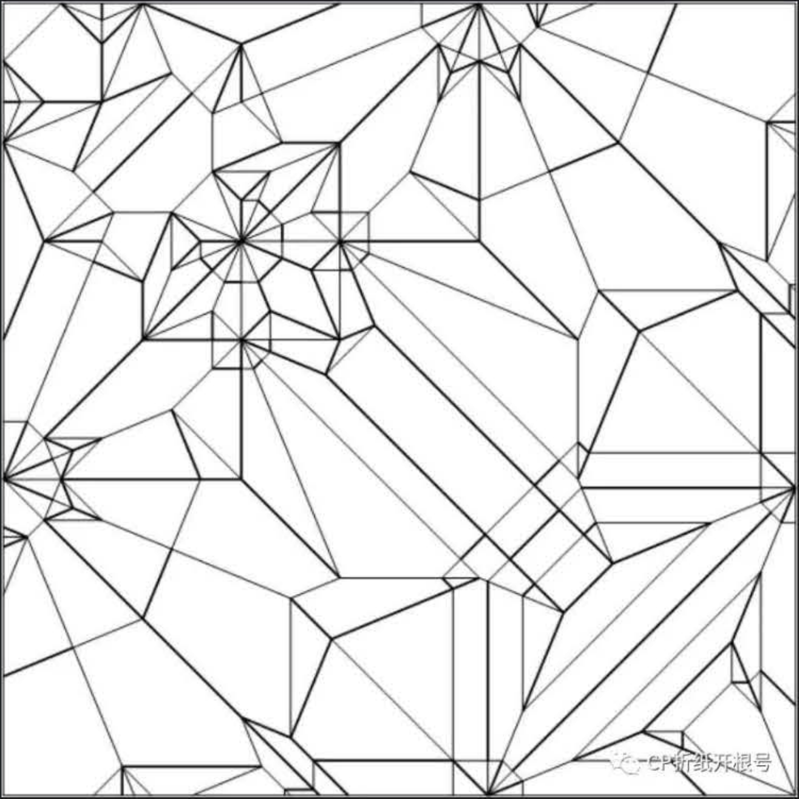
April, can everyone improve the level of origami? Feelings about CP?

Maybe everyone wants to fold about the same as the origami they like. During this time, everyone 's comments and private messages are gradually decreasing. Maybe there is less enthusiasm. Maybe I 'm too slow to reply. Many people ca n't wait. Let go and insist, I am insisting!

Let 's fold the hippo's Cp together in this issue. I have only recently obtained the CP of this work. It is probably a new product!
There are three people in the public account and private message that want to fold this work, let's briefly talk about it below.
This CP picture to be said today uses the light and dark thickness of the black tone to represent the peak and valley lines, and the clarity is a little worse! You can define the peaks and valleys by yourself, but this time I will use my peak and valley aggregation order to fold it.

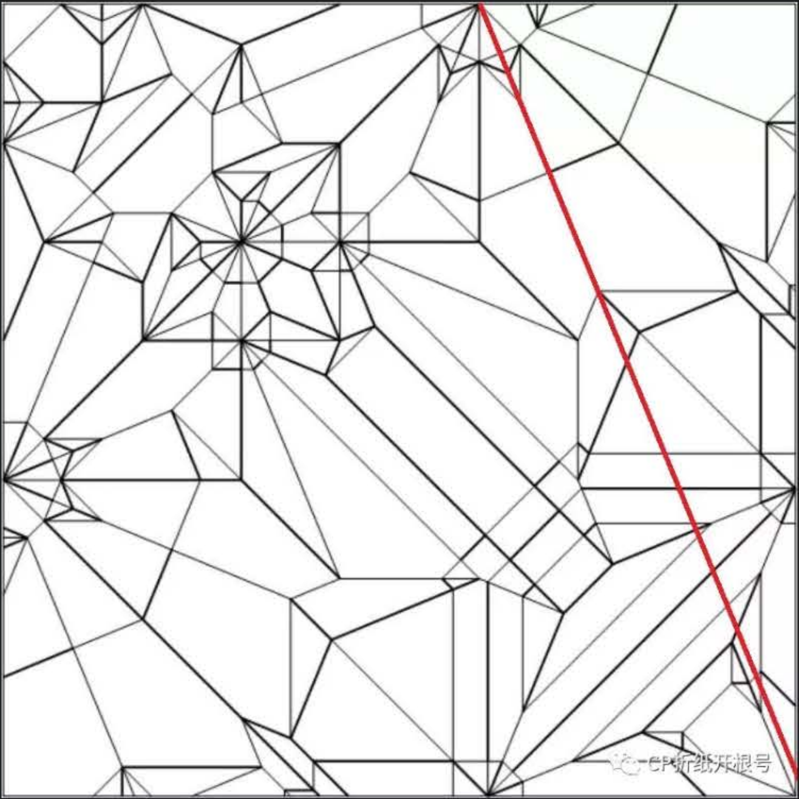


CP折纸开根号



CP折纸开根号

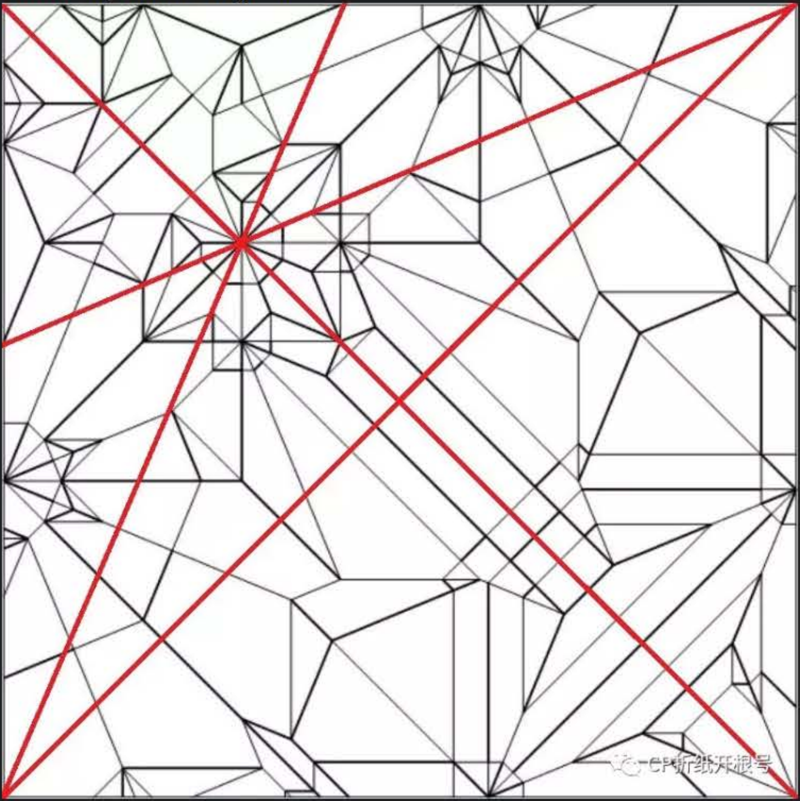
The first thing I want to say is that you don't see lines that are 22.5 degrees connected remotely, sometimes they are not necessarily on the same straight line, such as the two points in this drawing.



Please keep in mind that many masters' works do not intersect at the full line of 22.5 degrees, that kind of limitation is very big. , Then start wiring according to the following figure

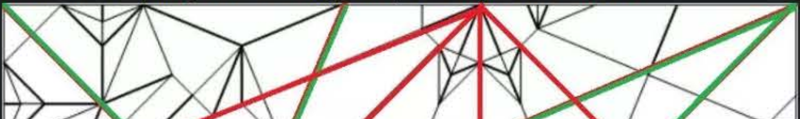
The way to wire is red

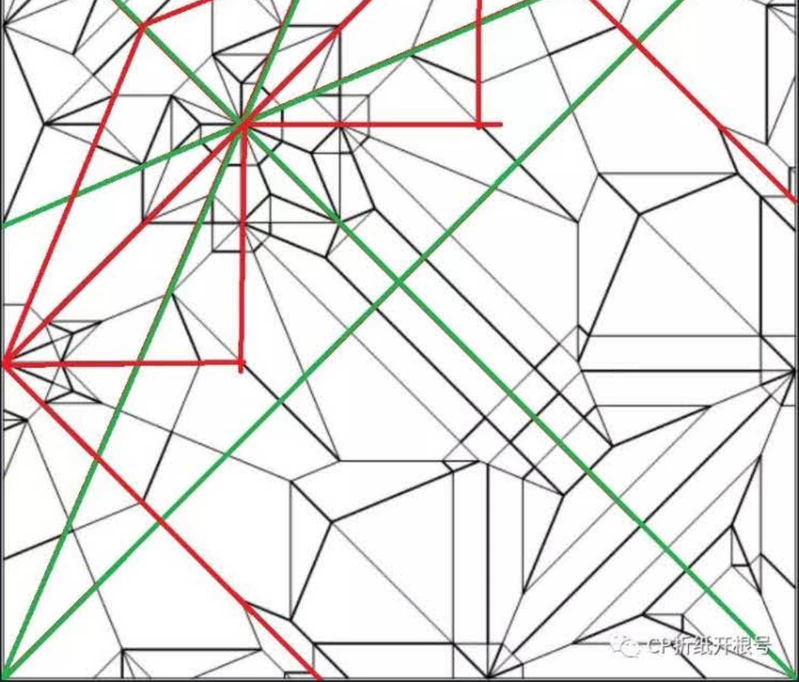
The thread you hit is still green



CP折纸开根号

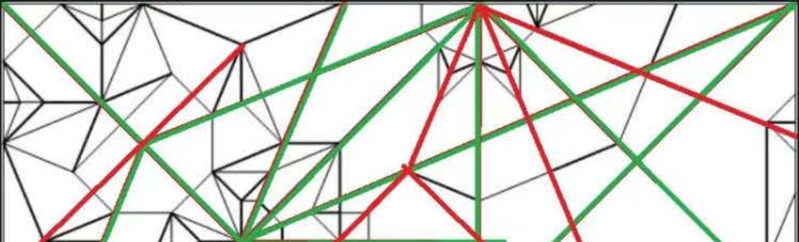
From the base point, there are always many 22.5 degree lines around

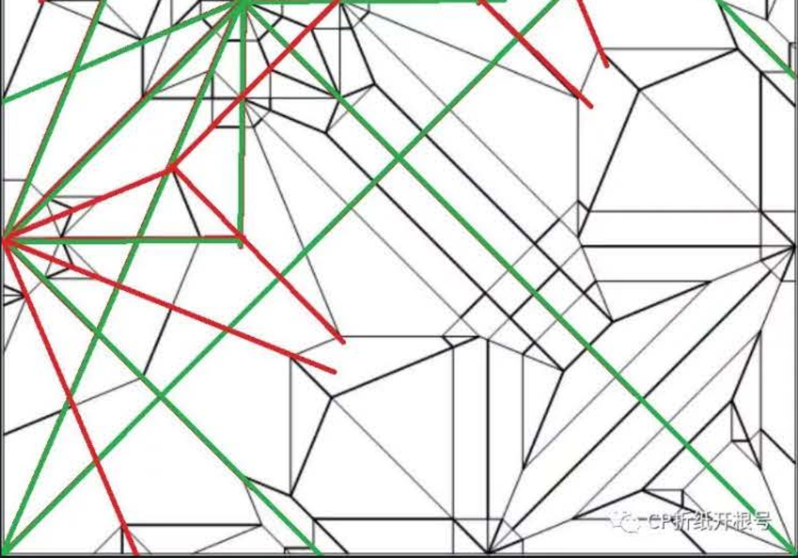




cp折纸开根号

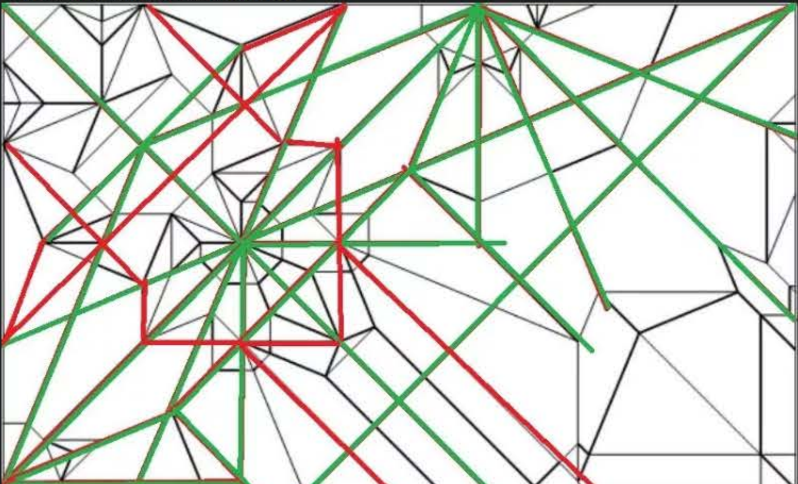
Individual 22.5 degree lines can be made with the help of 45 degree lines

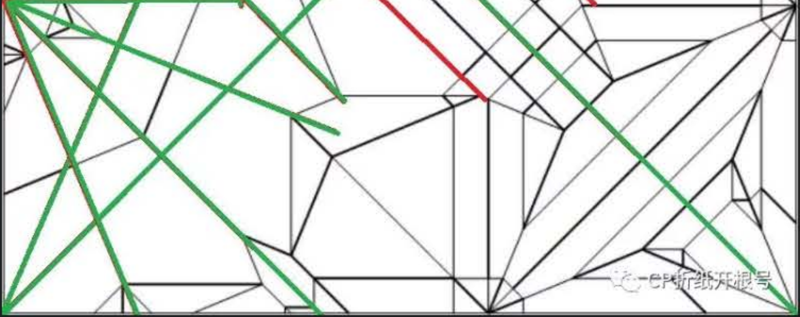




CP折纸开根号

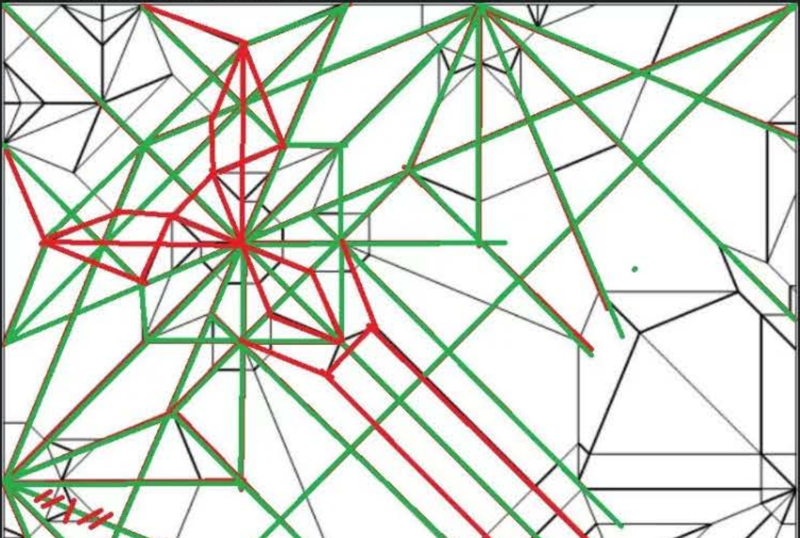
If a lot of people still can't make the line, you can also fold two 22.5 lines in different directions on the square paper to run through the whole paper, and every short 22.5 degree line will be based on this.

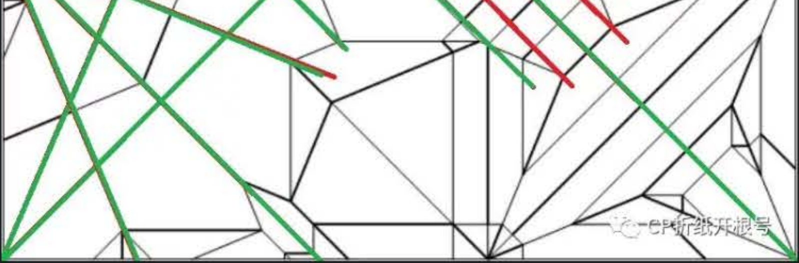




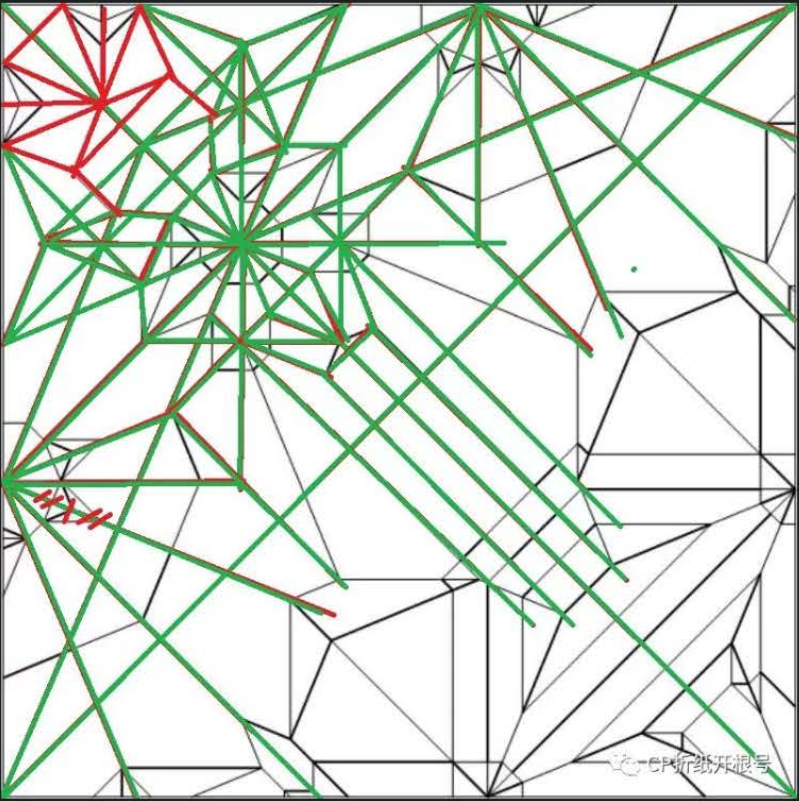
CP折纸开根号

In the figure below, the midpoint of a line segment is marked in red on the bottom left. This is mainly to mark the fold friends who want to make a full line at a time. The foot is exactly the midpoint on this green edge.





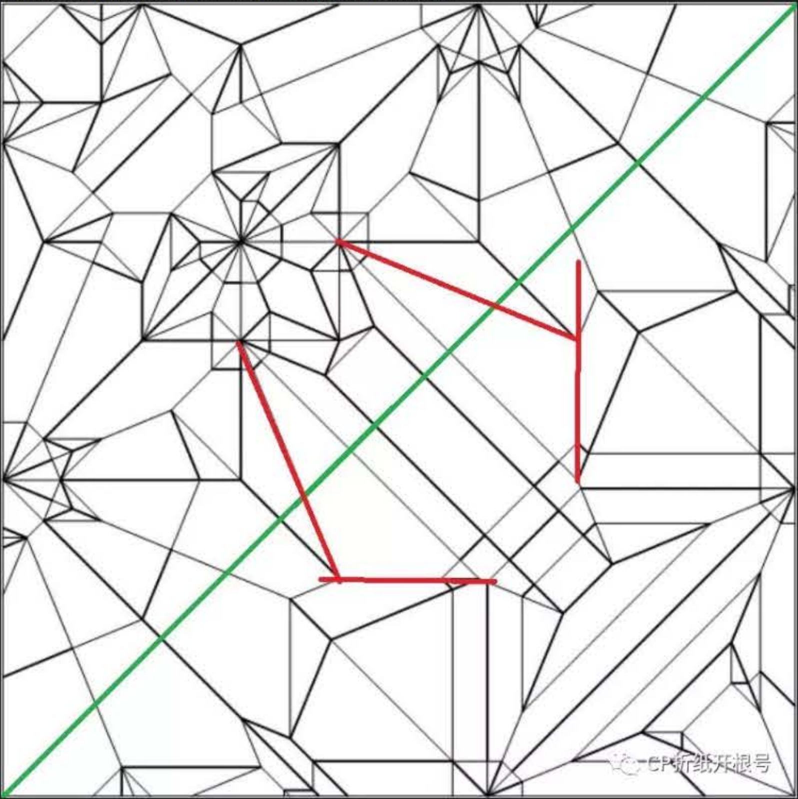
CP折纸开根号



CP折纸开根号

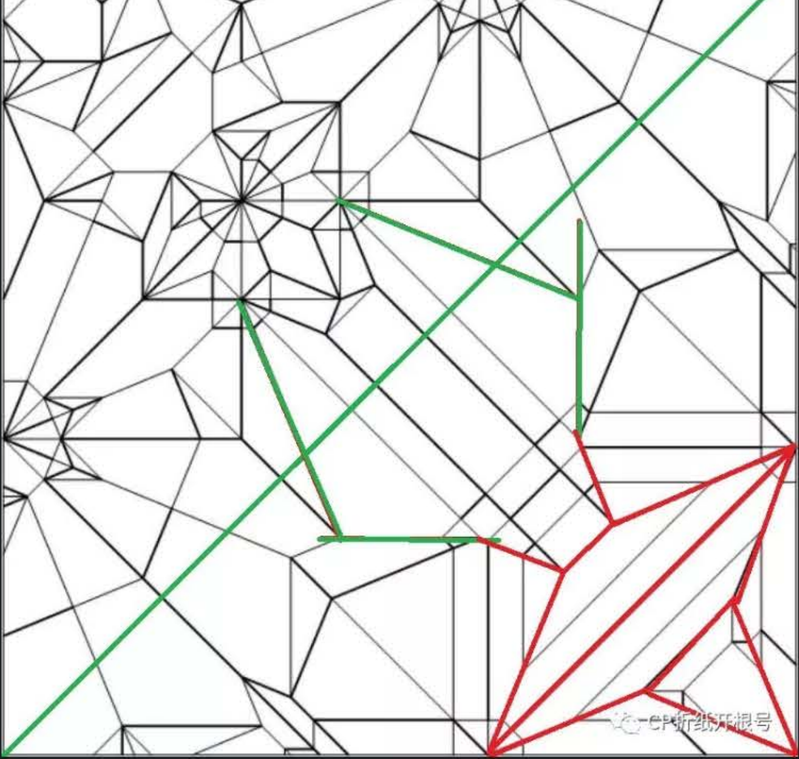
Next, for the sake of clarity, I have hidden the upper left line. Let's focus on the bottom half.

The point is here, all the short-term intersections.

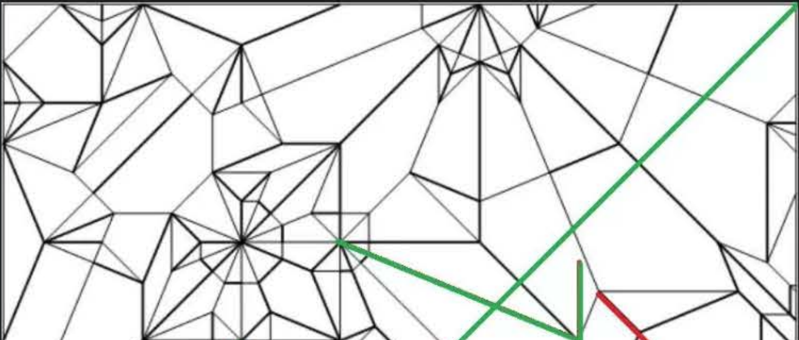


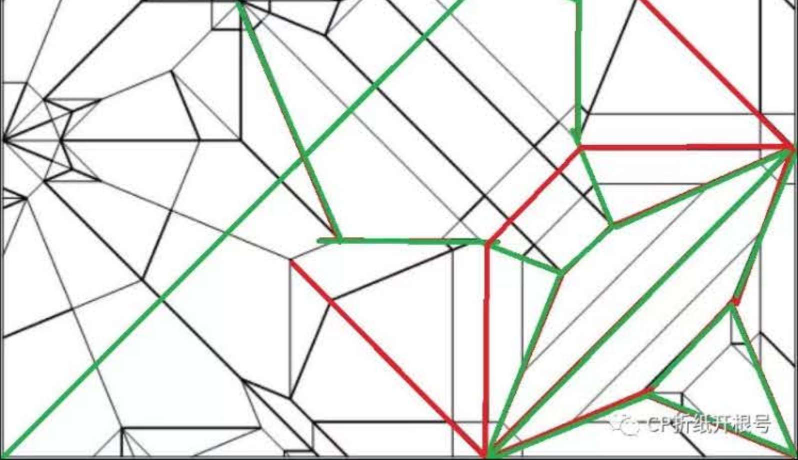
CP折纸开根号

Everyone can definitely find the intersection of green, red, black, and three lines in the picture below, but if you hit the red line directly, have you found a way? ? ? 😎Only by solving the red line can all the red lines in the bottom right corner be made well.

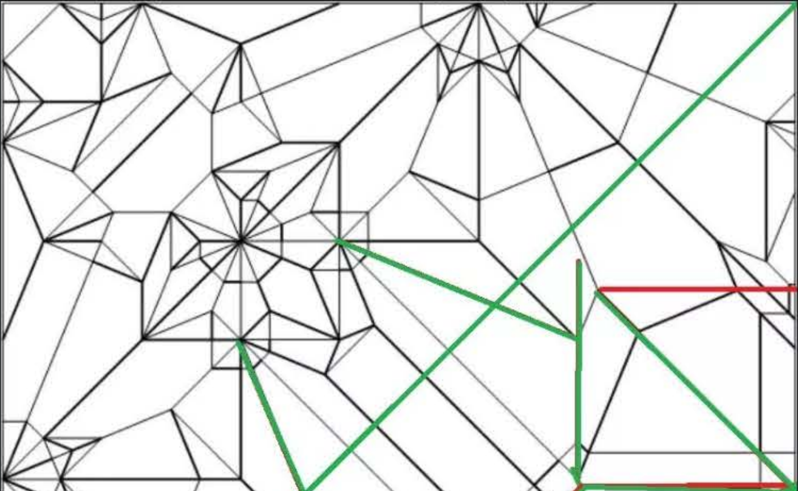


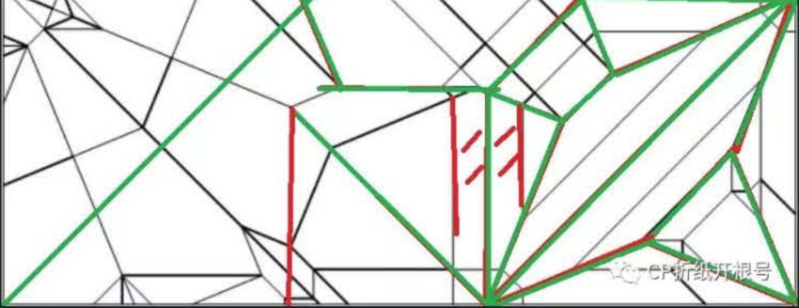
CP折纸开根号





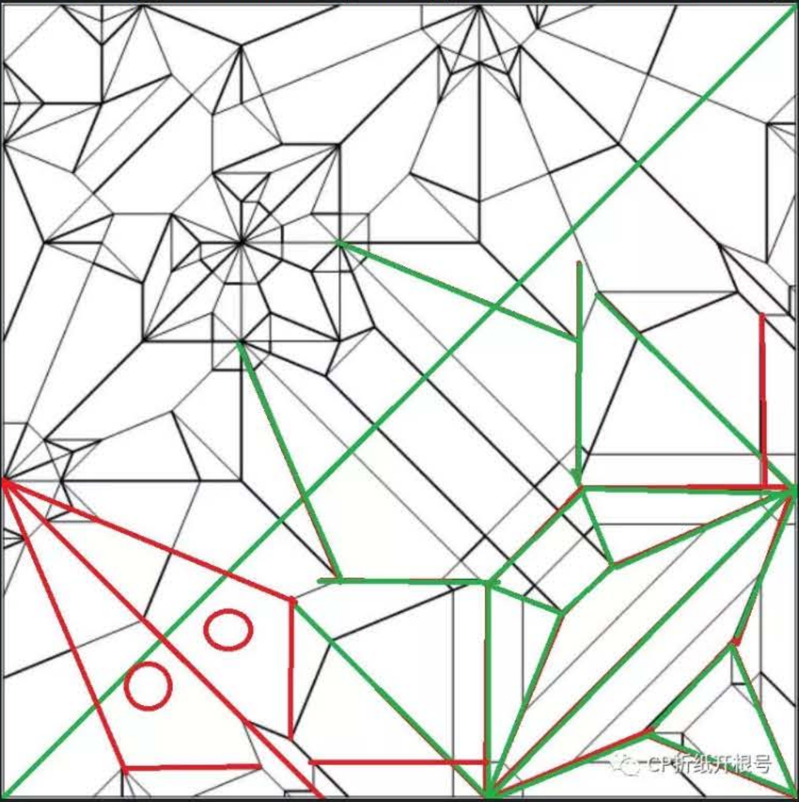
Below, don't forget that the two red lines are equally spaced.





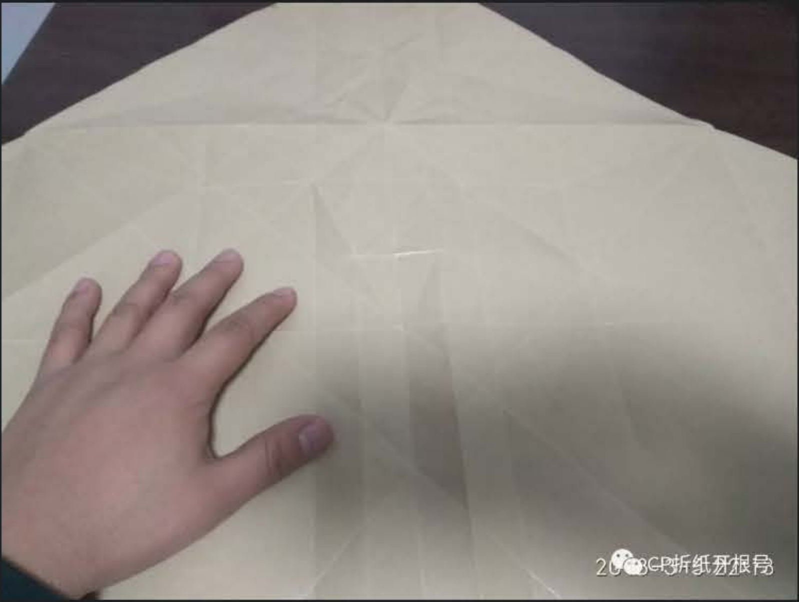
CP折纸开根号

In the end, the two symmetrical figures in the picture below are to be printed. If you can't find a way, you can find a small piece of paper and try how to do mirror folding.



CP折纸开根号

After the line is up, let's get together!
Here are a few pictures of the line!



CP折纸开根号

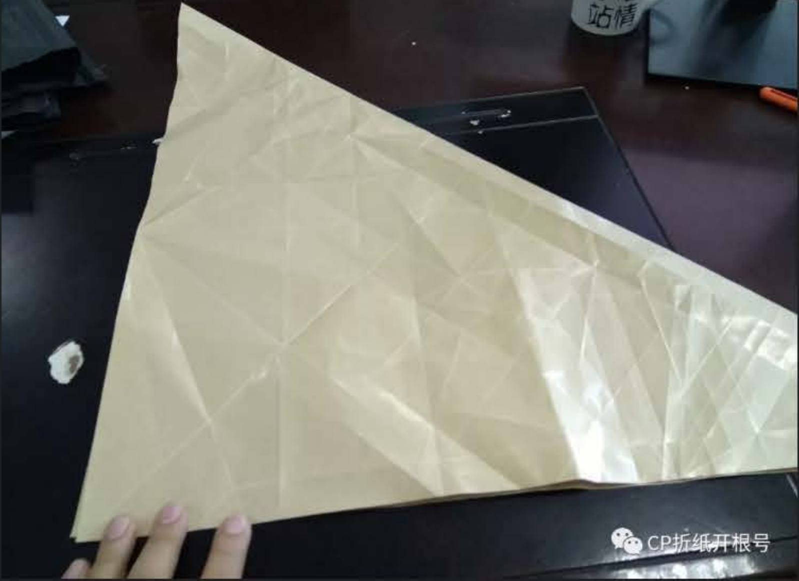
CP折纸开根号

CP折纸开根号

In fact, if you look at the picture below, there are a lot of lines on this paper. It doesn't seem so easy!
It is estimated that everyone should take about an hour to get here.

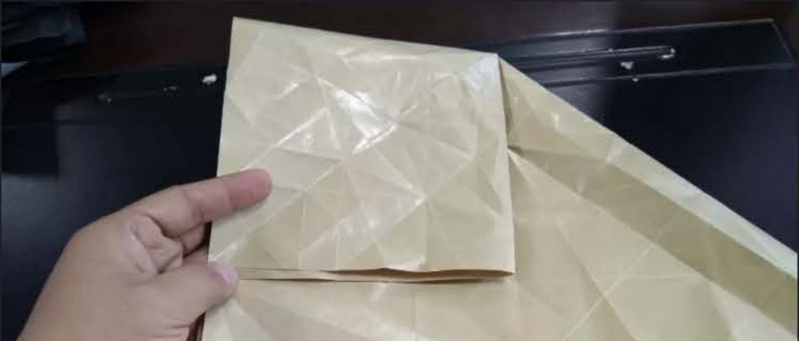
CP折纸开根号

polymerization
Start with a diagonal fold.

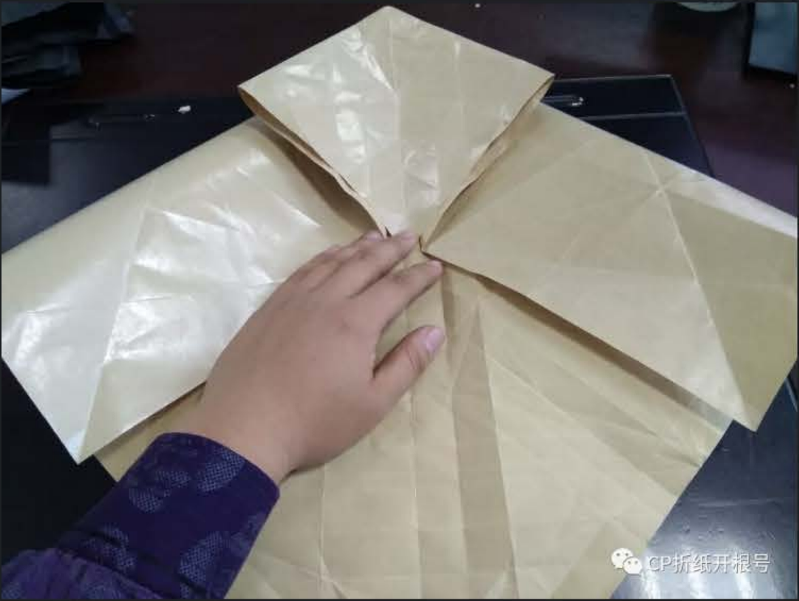


CP折纸开根号

The square here I believe that all the friends who have crossed the line can find it



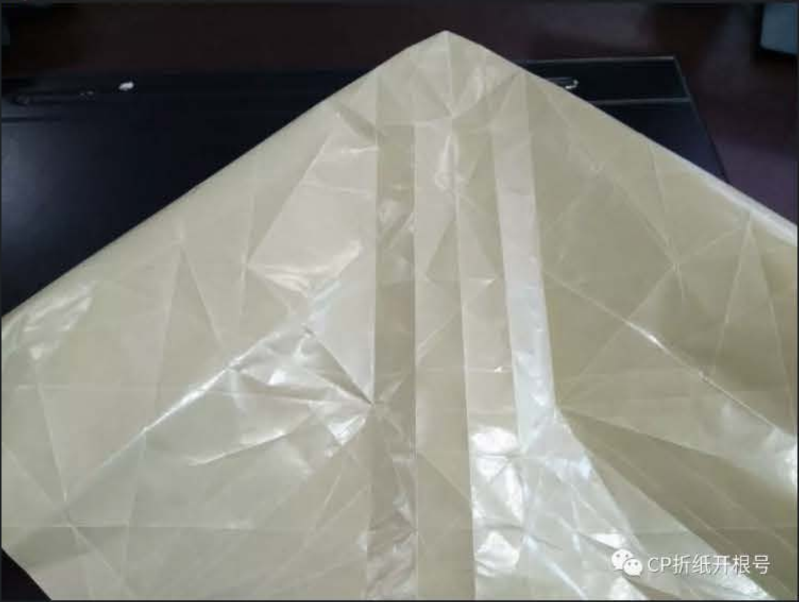
CP折纸开根号



CP折纸开根号

CP折纸开根号

Flip



CP折纸开根号

Fold right

CP折纸开根号

Let's make various folds of 22.5 degrees.

2013CP折纸开根号

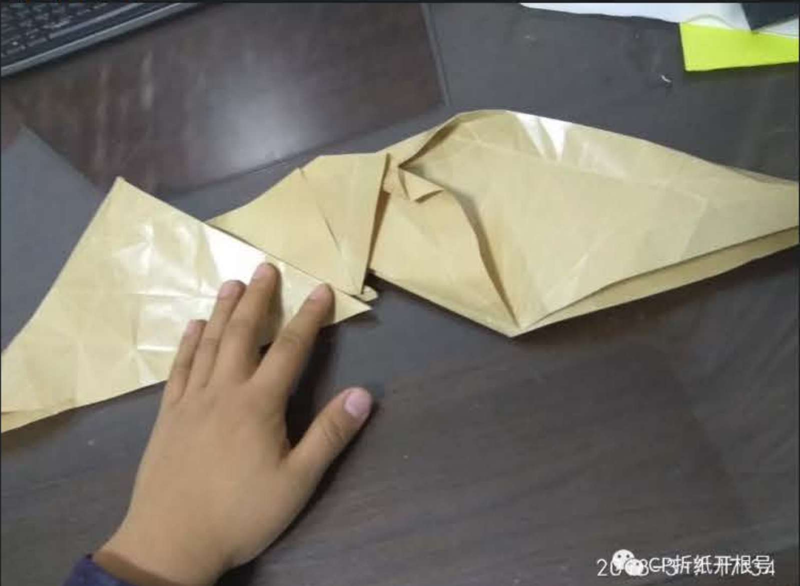
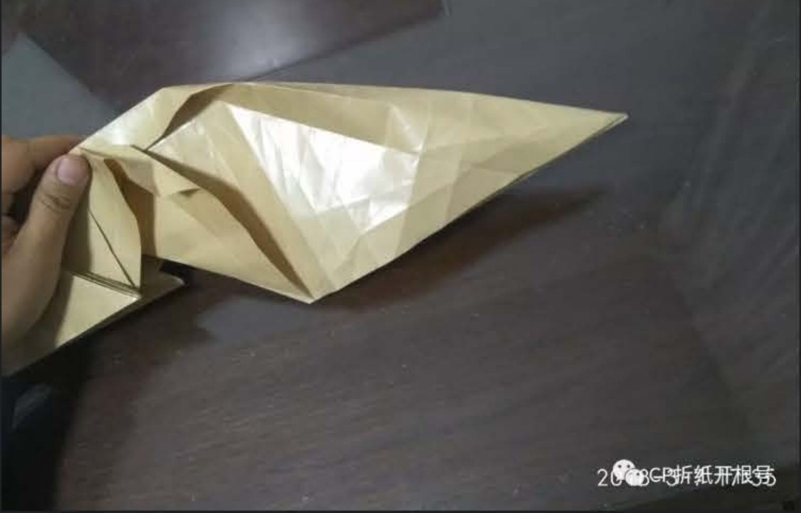
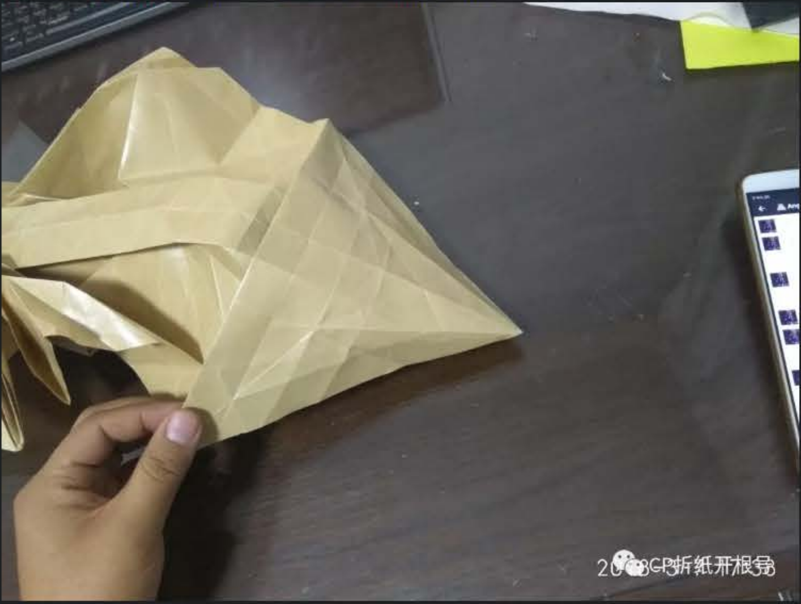
Light press, flatten



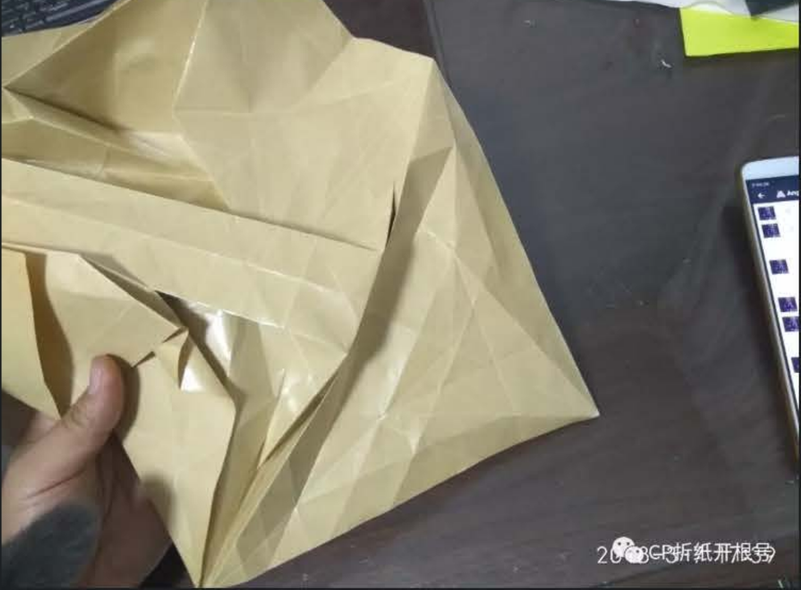


CP折纸开根号

Pull the tail away and press CP to make a small setback

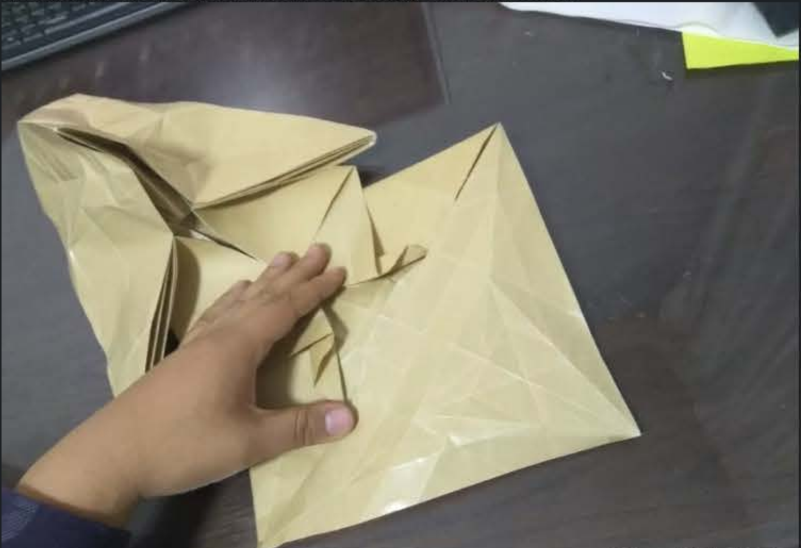


CP折纸开根号

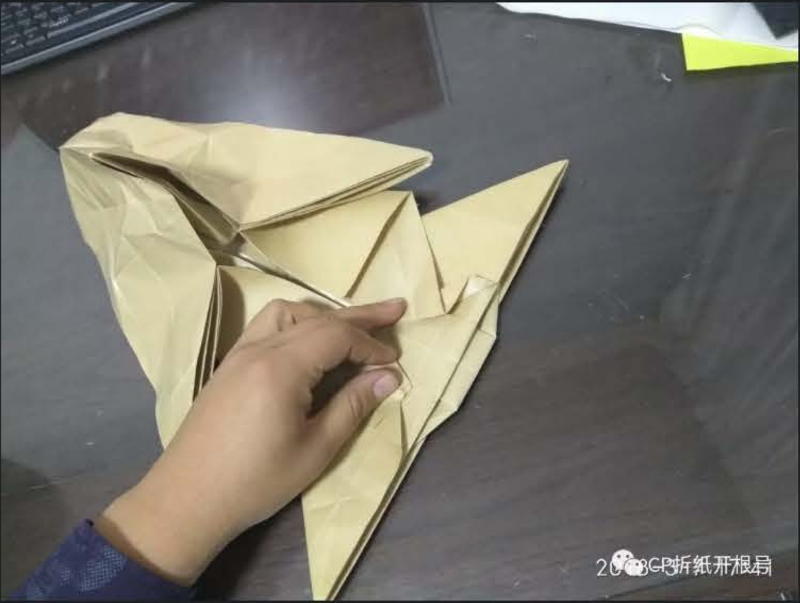


折纸开根号

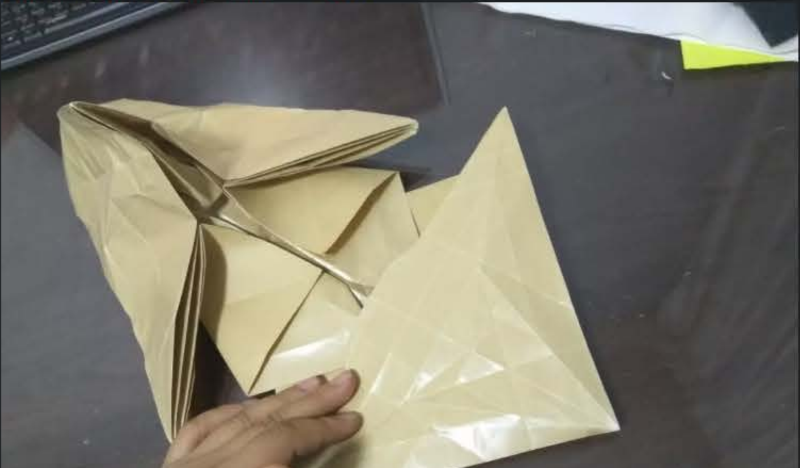
Extend from the back, so that the lower body can be flattened.



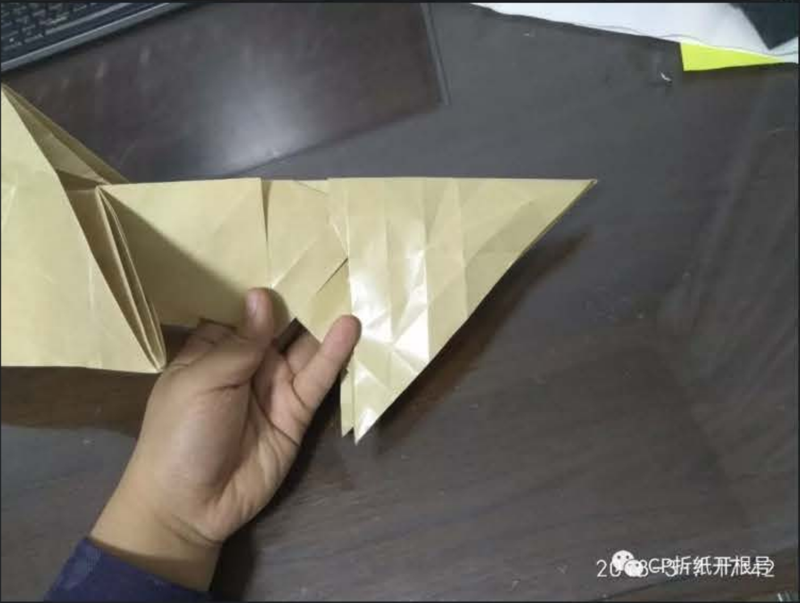
Press CP to fold the tail peak back.



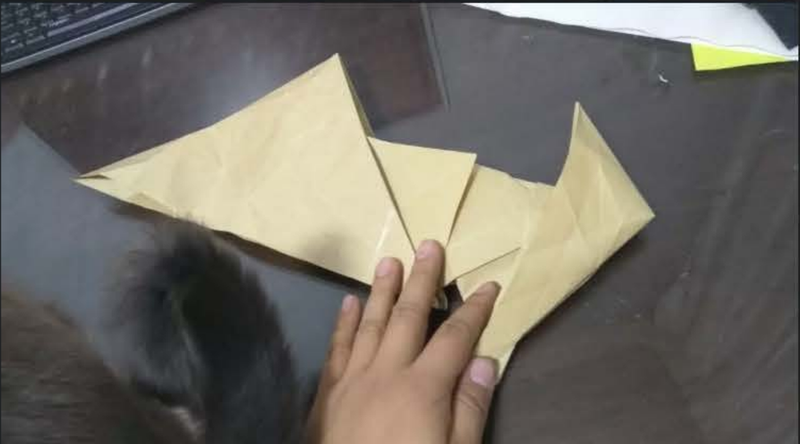
The tail is turned to the front as a whole

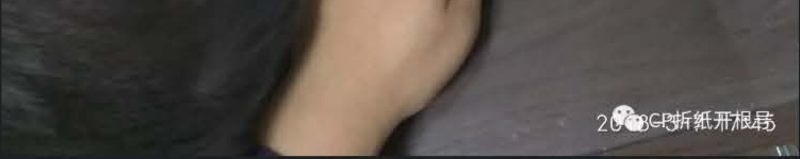


CP折纸开根号



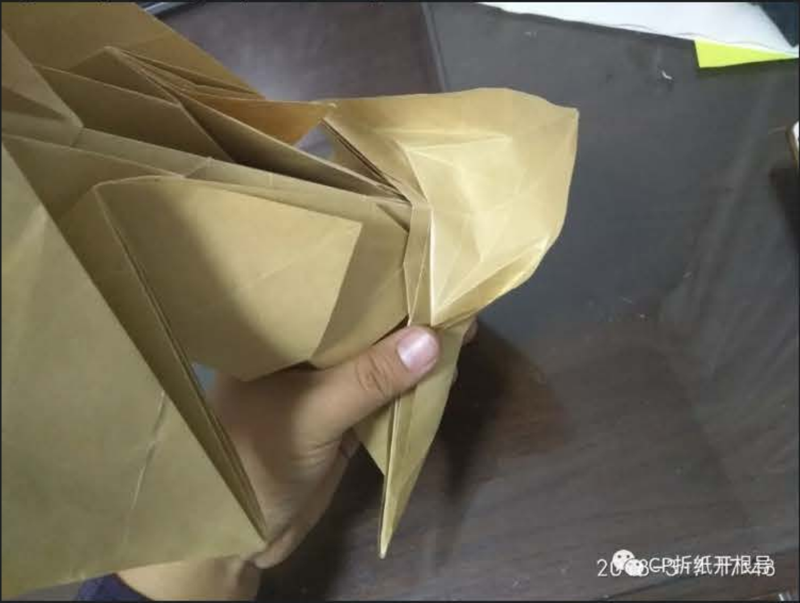
CP折纸开根号



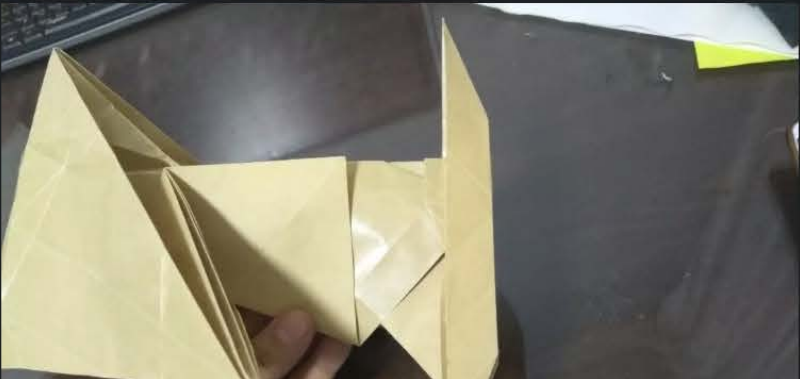


CP折纸开根号

Adjust tail position by CP peak and valley

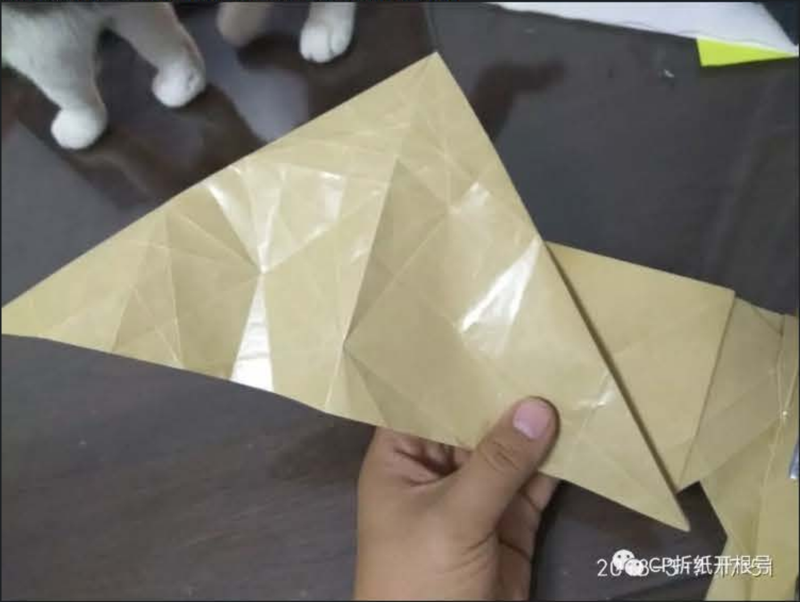


CP折纸开根号

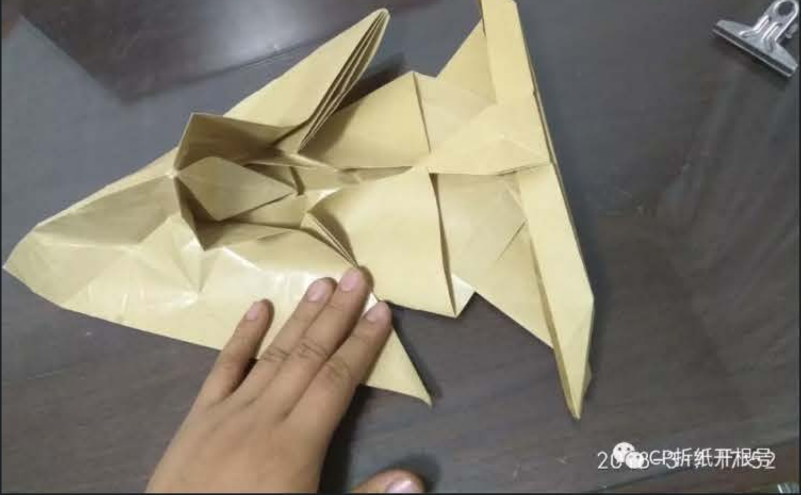


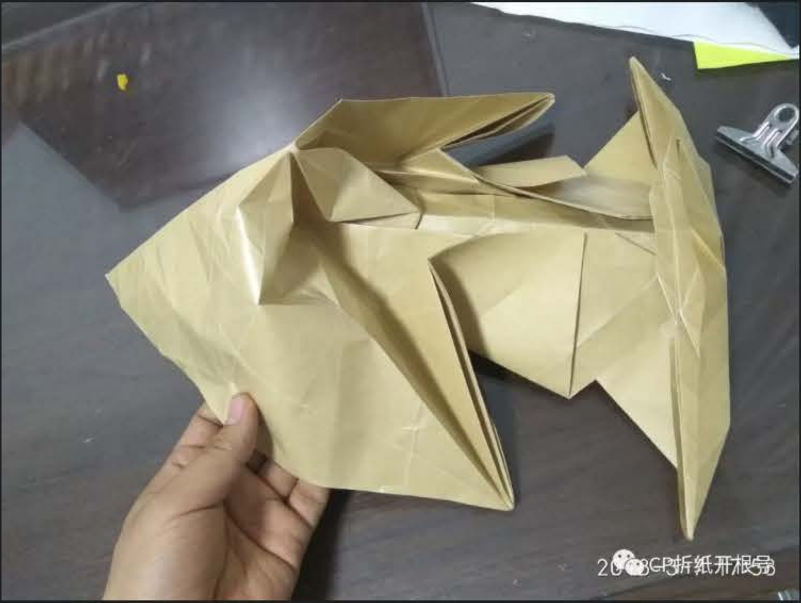
CP折纸开根号

Finally start to deal with the head and upper body

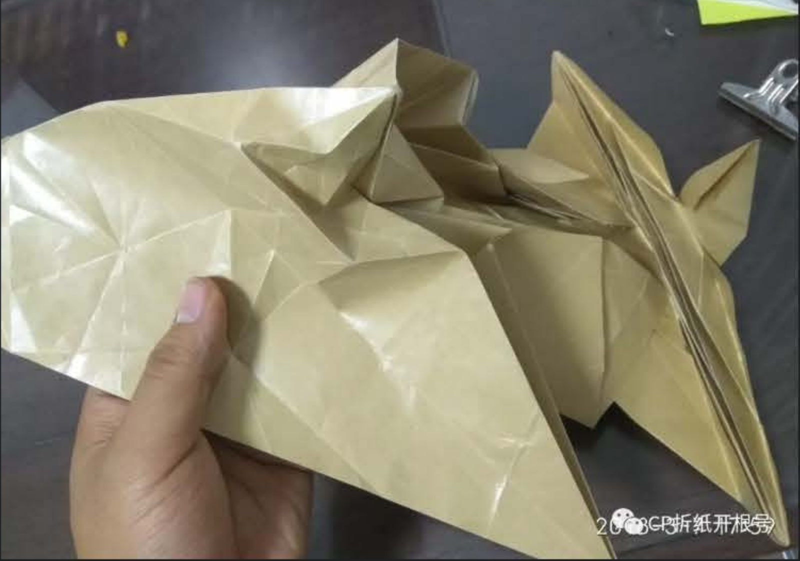


CP折纸开根号

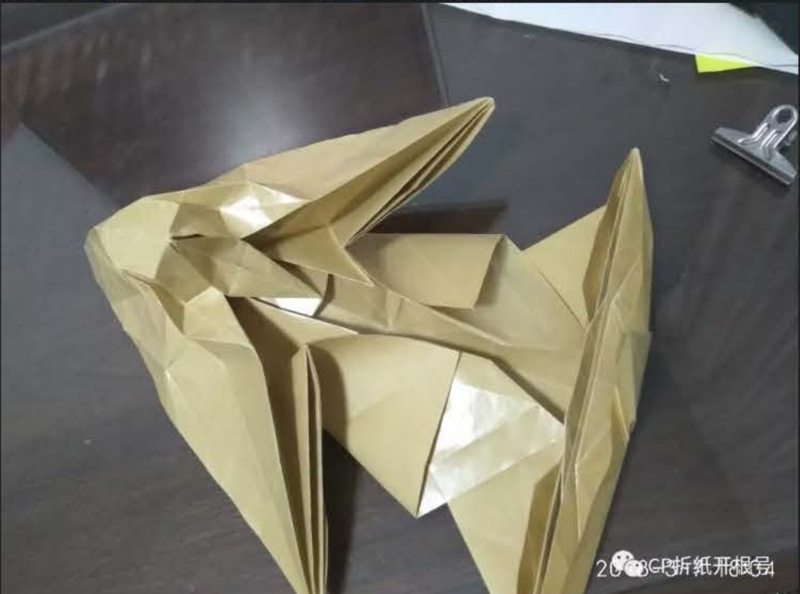


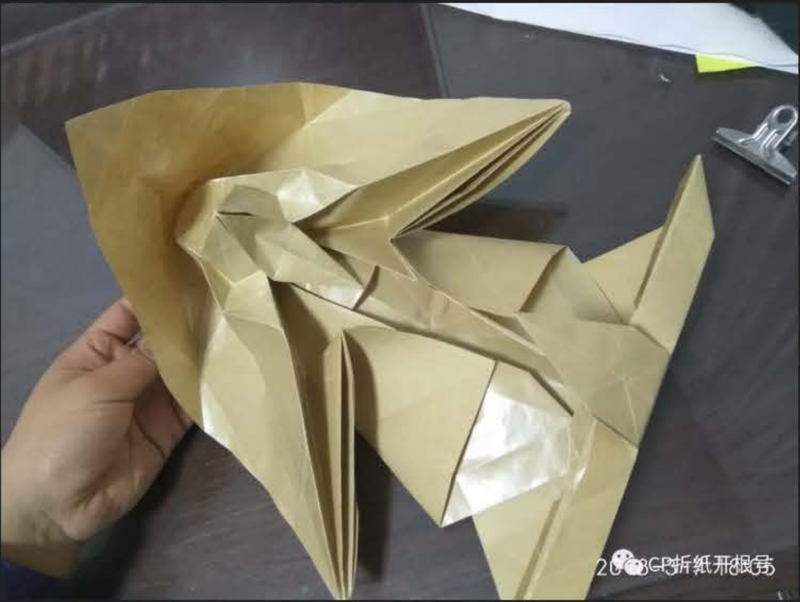


Pull the inner side of the head denser at 22.5 degrees



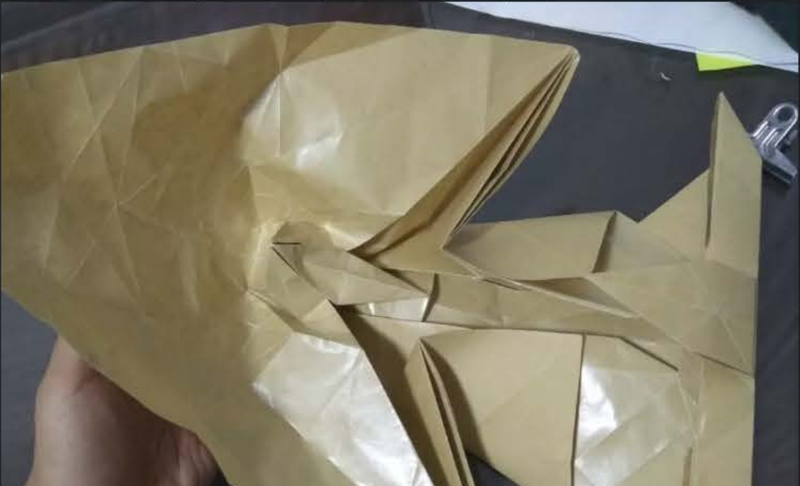
Here everyone should pay attention to the conversion of peaks and valleys.



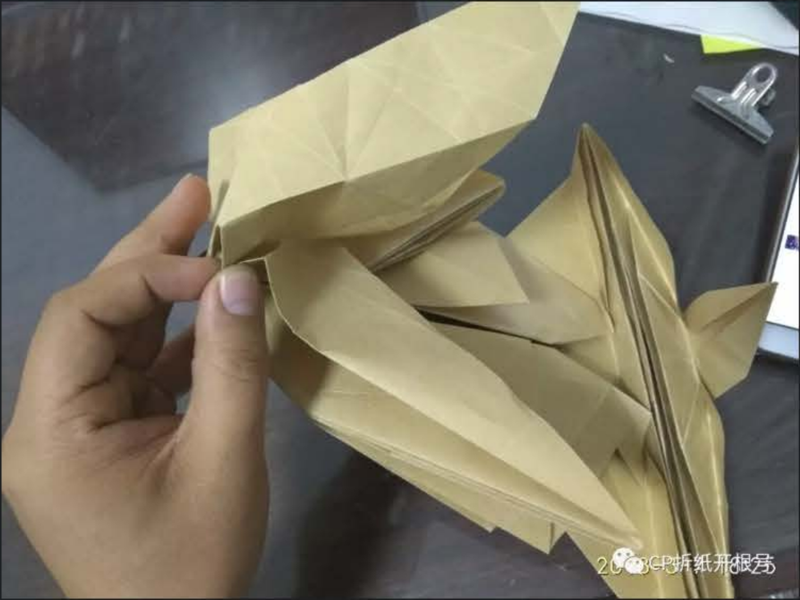


CP折纸开根号

It's a bit difficult here, be sure to separate the inventory layer and the double layer



CP折纸开根号



CP折纸开根号
