CP sharing series NO.03 total twenty-fourth issue of insects

Origami students Takayama CP origami opening number2018-04-01

In April, I still share the beetles in Insect CP with you. The work I said to you today is stag beetle. The original author 's name is also on the picture. The 4.0 version of CP is definitely able to match, everyone rest assured.

This work is different from the two beetles we folded before. You can observe it before you start.

The name above the picture is the original author, first pay tribute to the original author!

This design is really good, shrinking the grid of the snake belly to a small amount. According to what we said in CP Warm Knowledge 3, if it is all 45-degree lines, everyone thinks that this Cp needs to add at least 10 grids and 8 grids.

Knowledge point in this issue, continuous square turn.

(Everyone should pay special attention to the connection of the three squares below to see how it affects the peak-to-valley conversion of the lower line)

After shooting the knowledge points, I personally recommend that you first find the paper to learn this point, and then come together.

Of course, the people who can see this public account are very strong, and you can also call directly to gather.

Find the key centerline and fold it vertically.

Compared with the previous two issues, the middle section is a bit more, but the overall difficulty has only increased a little, I believe that everyone will have no problem, so please practice more and look forward to seeing everyone's finished products!
