Origami Interactive Series No.26 Total CP of the 89th stick insect

Original origami student Takayama **CP origami opening** number2019-03-30

Hello everyone, welcome to CP Opening!

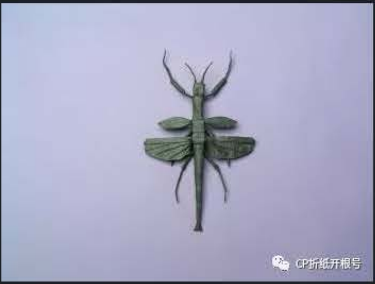
In this issue, we still follow the notice to come up with an issue of Lao Luo, stick insects. So in this issue: Stick insects

Also known as bamboo whip, it belongs to the **winged subclass of the** orthoptera, and is named for its slender body, with or without wings. The body is long and large. It is a medium or large insect, and the body is generally 6 cm to 24 cm. The largest 62.4 cm (also the largest insect in the world, found in China) has a short thorax and a long mid thorax and hind thorax, especially for wingless species. When stick insects 6 feet close to the body, more like bamboo, like the leaves of shrubs and trees. The wings of the winged species are mostly two pairs. The forewings are leathery, long and narrow, with numerous transverse veins. Most stick insects are dark brown in color, and a few are green or dark green. Distributed in Hubei, Yunnan, Guizhou and other provinces in China.

Most stick insects are dark brown in color, and a few are green or dark green. This worm can often be parthenogenetic, with fewer males, and more unfertilized eggs develop into females. When injured, the nymph's feet can fall off on their own and can regenerate. High temperature, low temperature, and dark light can make the body color darker. On the contrary, the body color can become lighter. The body color is different from day to night, and it becomes a rhythmic body color change. Stick insects phytophagous.

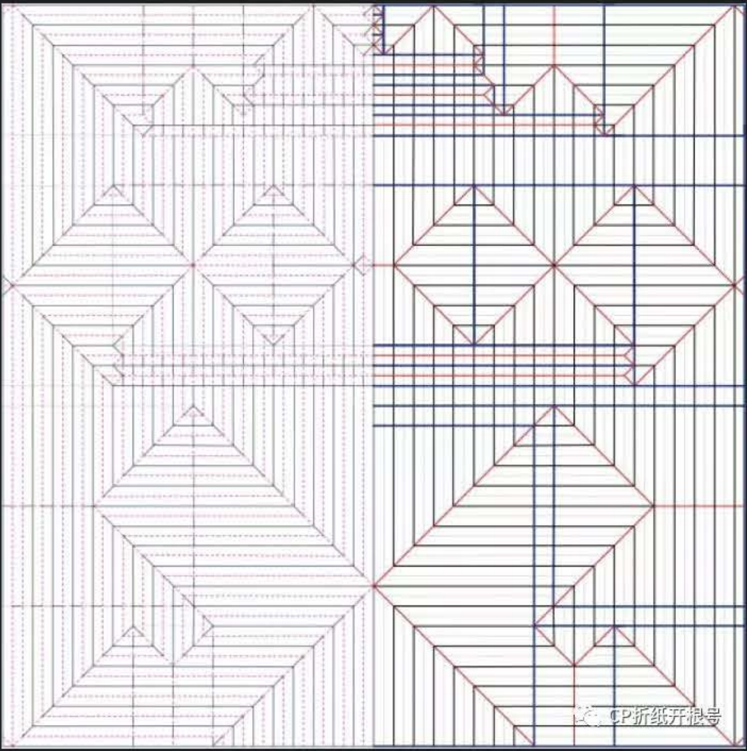
Stick insect is referred to as "worm repair" (synthetic word, xiū). Such as thin insect "worm repair", cotton stalk "worm repair" and oriental leaf "worm repair" and so on.

Let 's take a look at the CP of this issue!



CP折纸开根号

Works in this issue 74 * 74

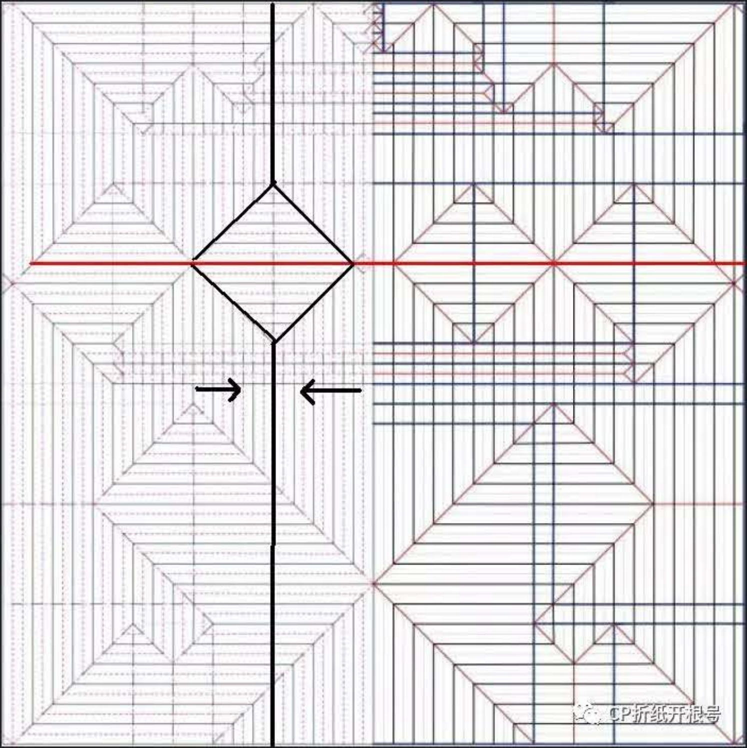


CP折纸开根号

Now we have to prepare the paper. First of all, I personally use the method of 80 * 80 which is 5 equal parts and then cut 6 parts. Of course, friends who do not want to cut can also personally ask me to ask 37 equal parts. Approach.
After the dicing is over, we use a certain amount of time to make the line, then spread it out and prepare to aggregate.

CP折纸开根号

Next, as shown in the following figure, first press the red line to fold the peak, then fold out the black frame, and then inward from the sides to the valley



CP折纸开根号

CP折纸开根号

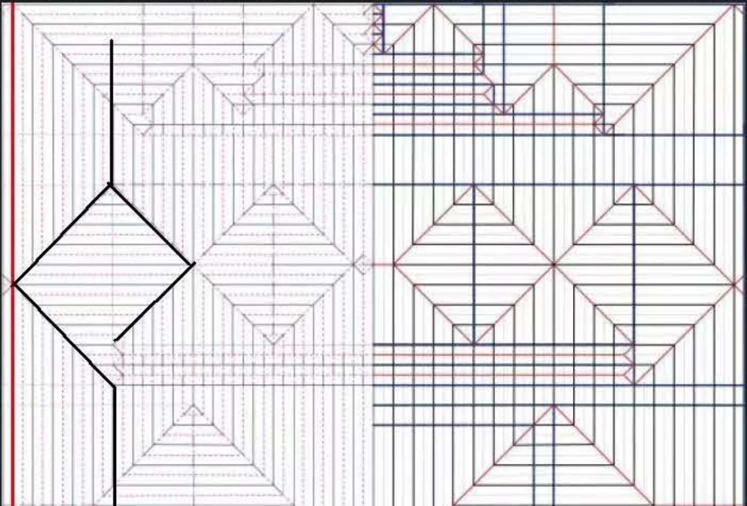
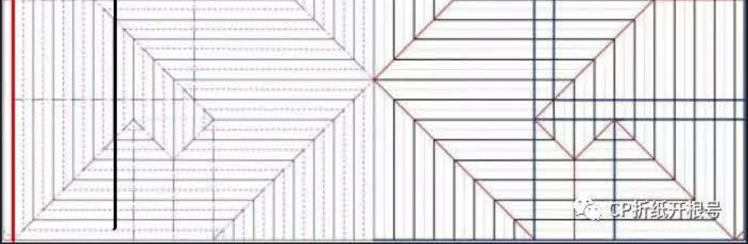
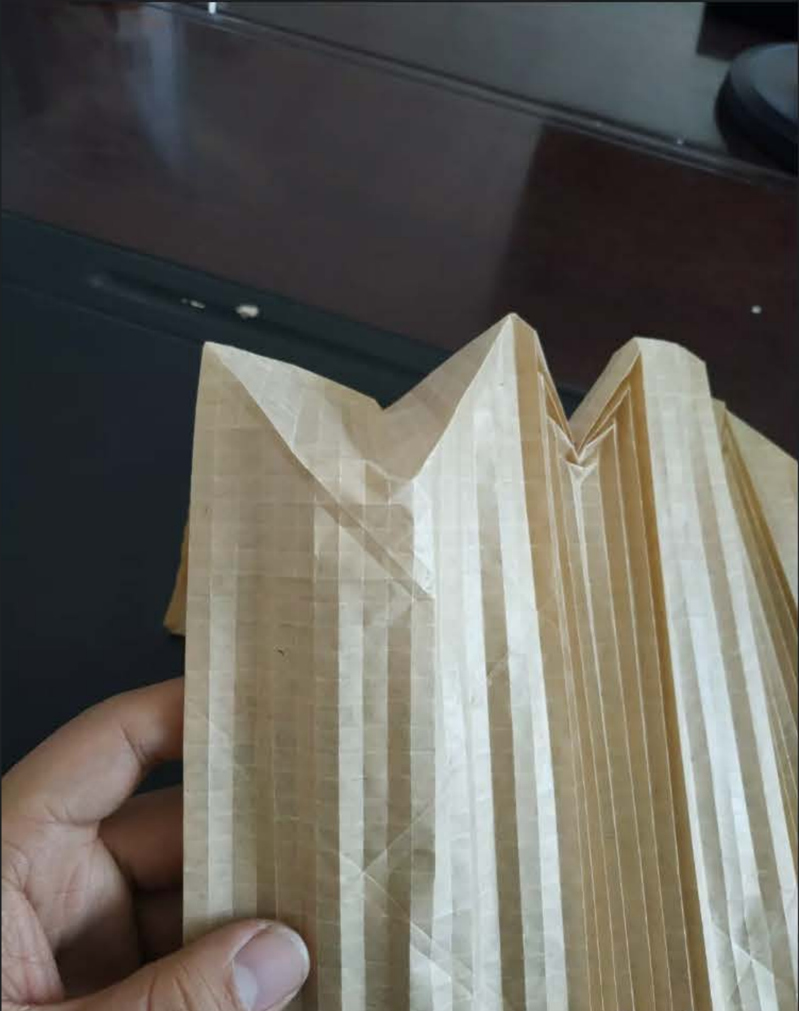
Next we follow the picture below, first fold the red line peaks on both sides into a grid, and then process the black box and the upper and lower linked parts in the picture



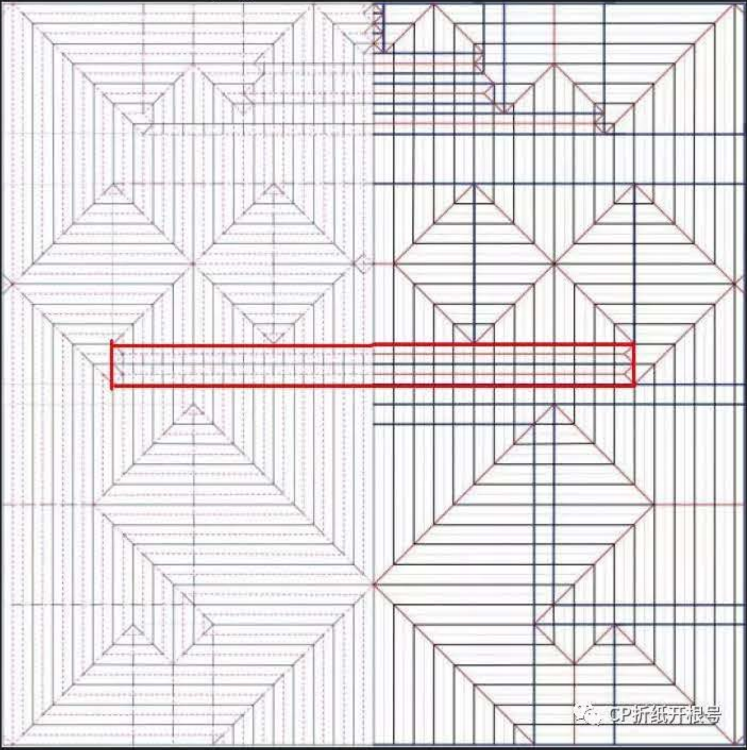


CP折纸开根号

CP折纸开根号



Before converging the above picture, we also need to process the long line as shown in the red box in the following figure.



CP折纸开根号

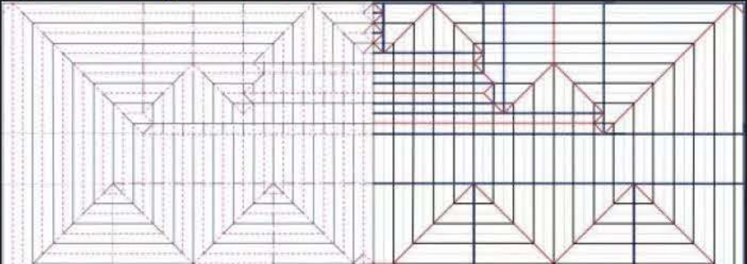
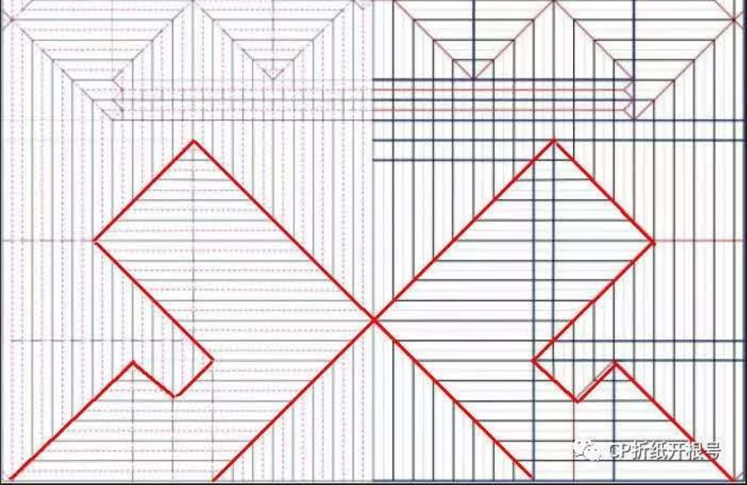
Below we process the red line part according to the following figure and start the aggregation according to the previous method





CP折纸开根号

CP折纸开根号

CP折纸开根号

After processing, we flip the work and start to process the other side. The method is to first make the long line in the red frame, and then fold the red line after the valley is folded.

CP折纸开根号

The paper I use is as thick as ever, I hope everyone uses a thinner paper,
Well,
That's it for this issue!
See you next time!
