Origami Interaction No.41 The 123rd issue is not the one in which Schrödinger's cat is not in the teaching

Original Origami Student Takayama CP Origami Opening Number 2019-11-26

Hello everyone, welcome to CP Opening!

I suddenly thought of sending out this issue today, otherwise it might not be good again!

This work should be an OB work, but not sure, because OB is about to be published, so his personal CP may not be cracked in the future. At least most of the angles will stop changing. This work was issued quite early because everyone did it. I do n't know if it is in his book. Although I ordered one, I do n't know what it is, but I want to fold it on the cover. Haha.

There will not be much explanation in this work. If you want to see the steps, please go to his book!

This work is a regular 22.5 degree line, there are not many difficulties, just hit all lines directly, it can be seen that friends with multiple paper layers can save the short line in the middle and the two short lines at the top corners.
To keep the mystery of the book, let's start like this!
