Origami Interactive Series No.31 Total 99th Fold Small Black Mosquito

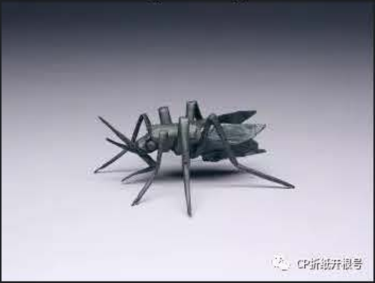
Original origami student Takayama CP origami opening number2019-06-07

Hello everyone, welcome to CP Opening!

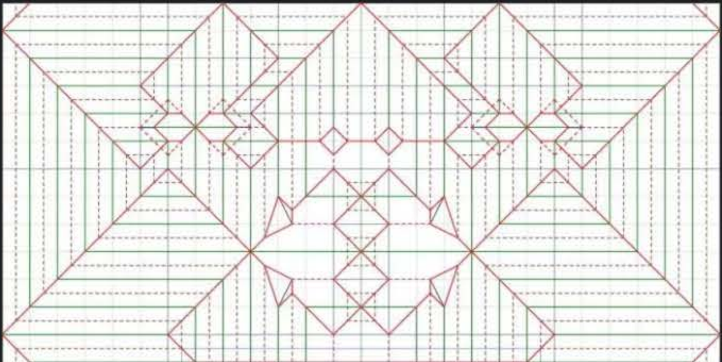
Everyone is too familiar with mosquitoes and will not talk about them.

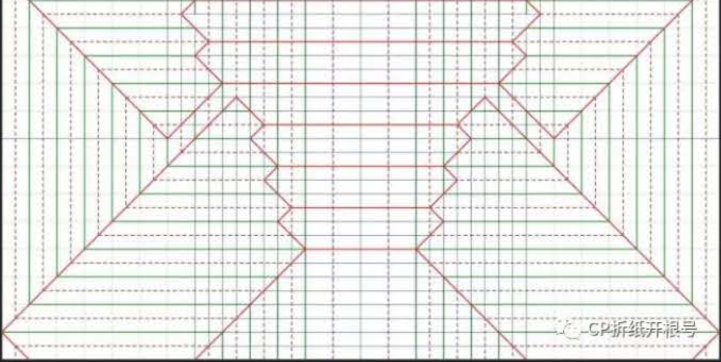
Mosquito (mosquito), belonging to the insect class Diptera family, there are about 3,000 species worldwide. It is a tiny flying insect with a sting suction mouthpart. Females usually use blood as food, while males consume plant juice.

Let's look directly at today's theme! Lao Luo's Mosquito



CP折纸开根号





CP折纸开根号

Works in this issue ,,, 52 * 52 square

In fact, the overall difficulty of this issue is not too big, but because there are two places in the middle and upper parts that look very headache, I will not put this issue into the entry-level series for the time being.

In order to let everyone understand this part well, we will follow the previous method and take a single shot of the knowledge point. Friends who have paid attention to this public account from the beginning remember the word, solo shot.

Below, I used a piece of 32-division paper to make only the upper right half of the above cp. Please come and play together!

Solo shooting begins Knowledge points in this issue: crossed squares

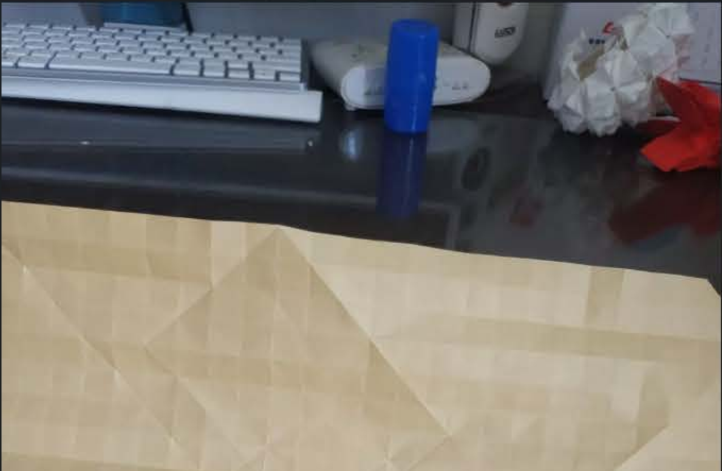
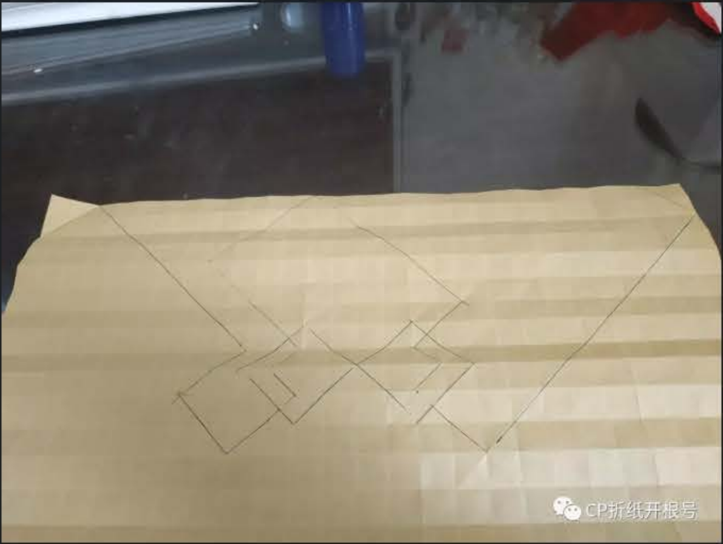
CP折纸开根号

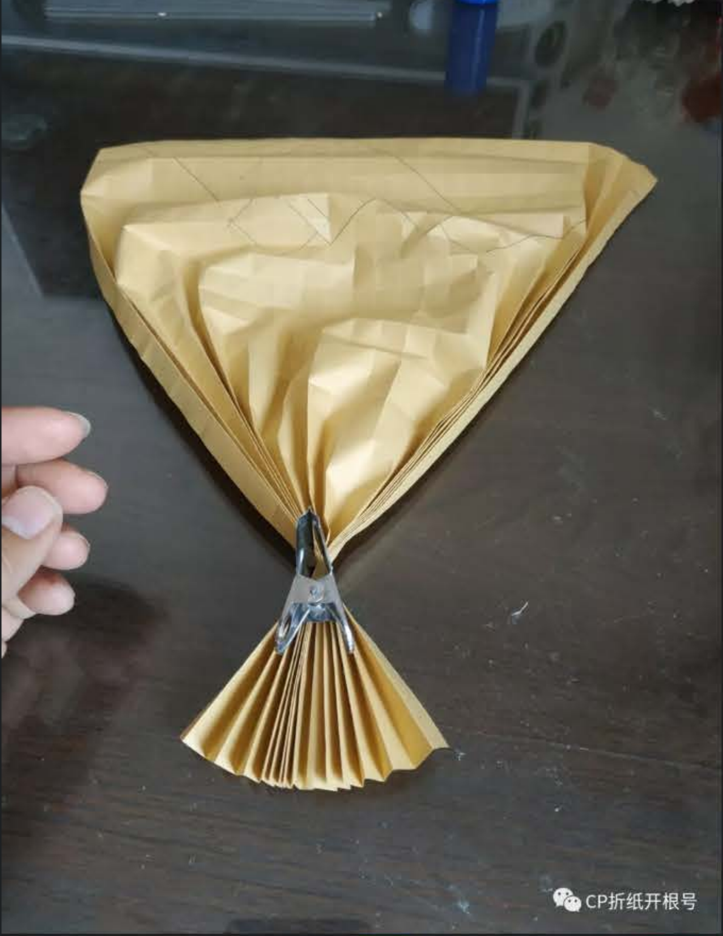


CP折纸开根号



CP折纸开根号

First of all, this is a cross structure that many people do n't like very much, especially the question of where to gather first and where to gather first. In fact, there is no way to define the order in a flash.



CP折纸开根号

CP折纸开根号

CP折纸开根号

CP折纸开根号

CP折纸开根号

Although it is a local real shot, the method of gathering first and then spreading is still used to solve the problem of who comes first.

CP折纸开根号

After you figure out the difficulties in this issue, you can find a large piece of paper and prepare to wire together with me!
Here I use hand-kneaded paper, and I suggest that good friends use black wax less than 30 to complete, the finished product will be more visual ,, do n't ask me why not ,,, poor.

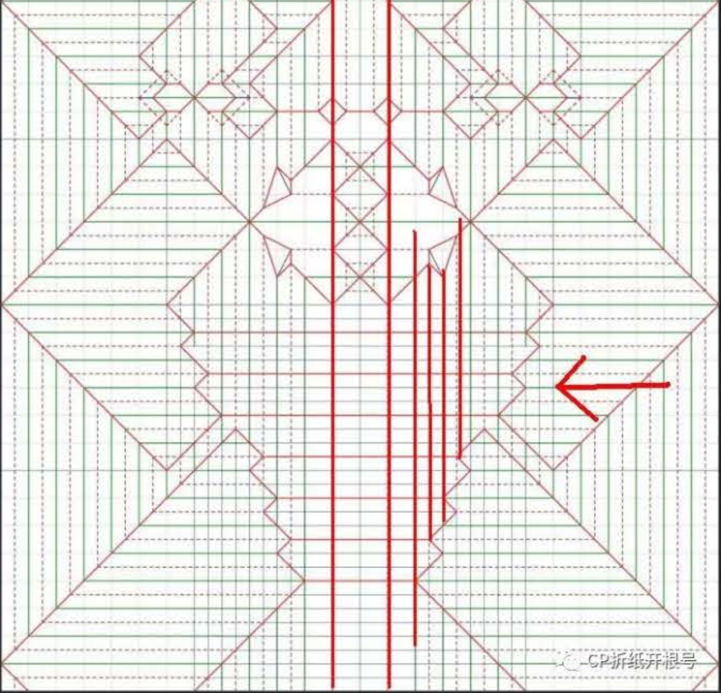
When everything is ready, let's get together!

CP折纸开根号

CP折纸开根号

First of all, the peak and valley line of this CP is not clearly defined in the belly of the mosquito. So you can start from the horizontal direction as shown in the above picture or start vertically as shown below. It is not a problem. From but in There is a slight difference in the final shaping. This time, I started the polymerization vertically as shown in the figure below. How about you

As shown in the figure below, two cells are taken from the middle as a unit, and then two sides are taken in as a cell



CP折纸开根号

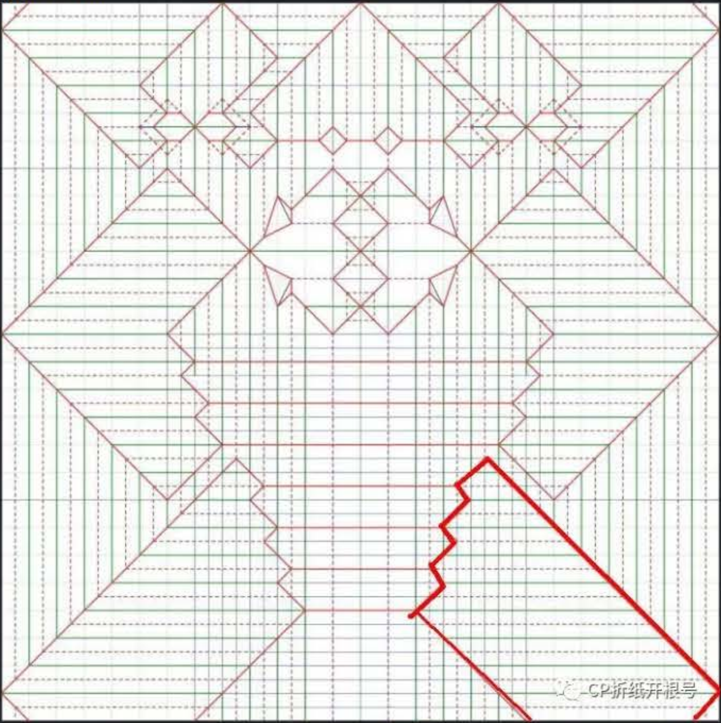
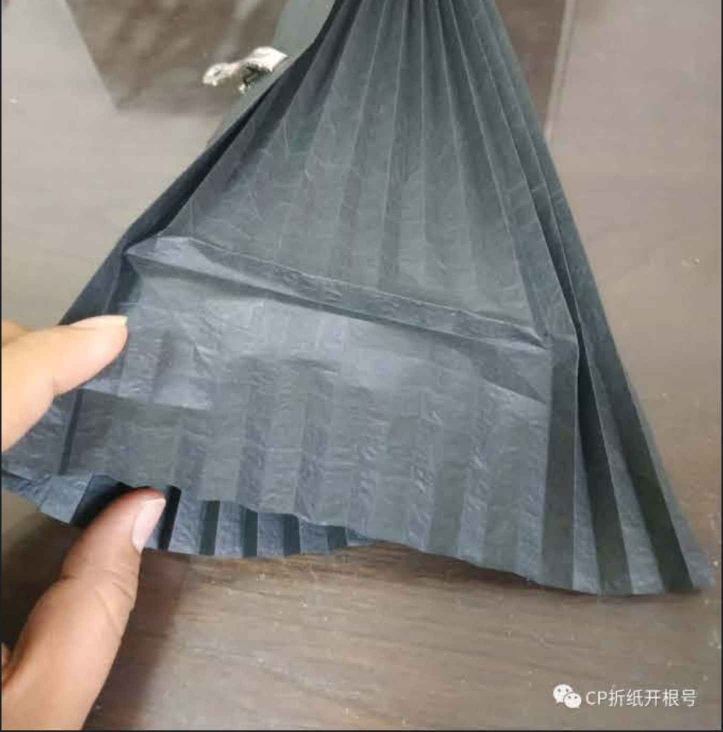
After the upper end is fixed, we will pull the red line part and converge in according to the figure below



CP折纸开根号

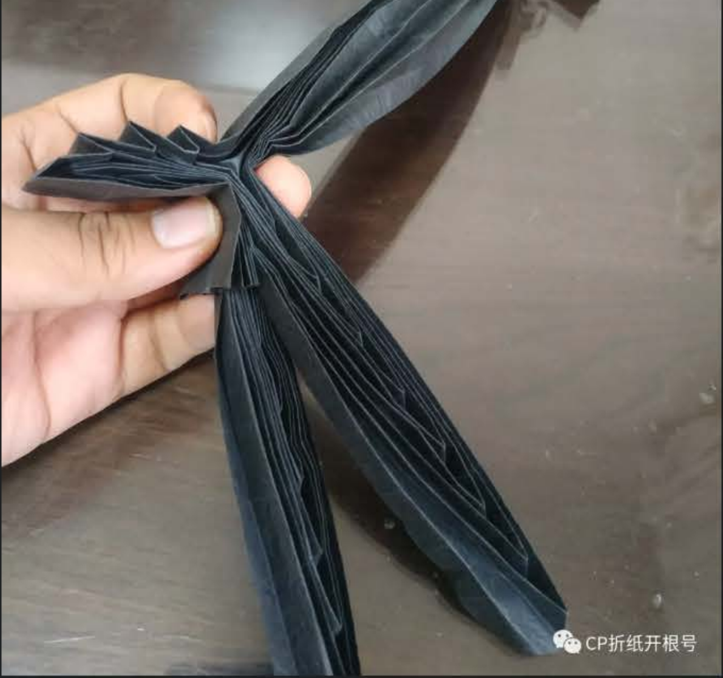
CP折纸开根号



CP折纸开根号

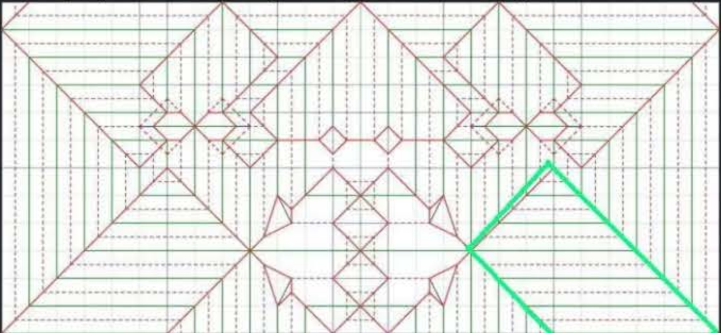
Pull out simultaneously on both sides

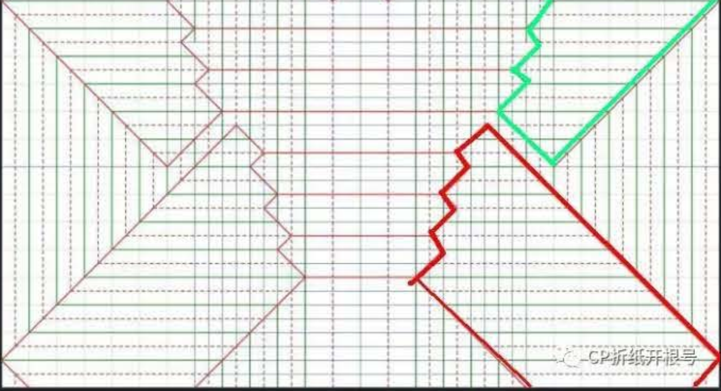
CP折纸开根号



CP折纸开根号

Back to the perspective, we then open the green line in the figure below

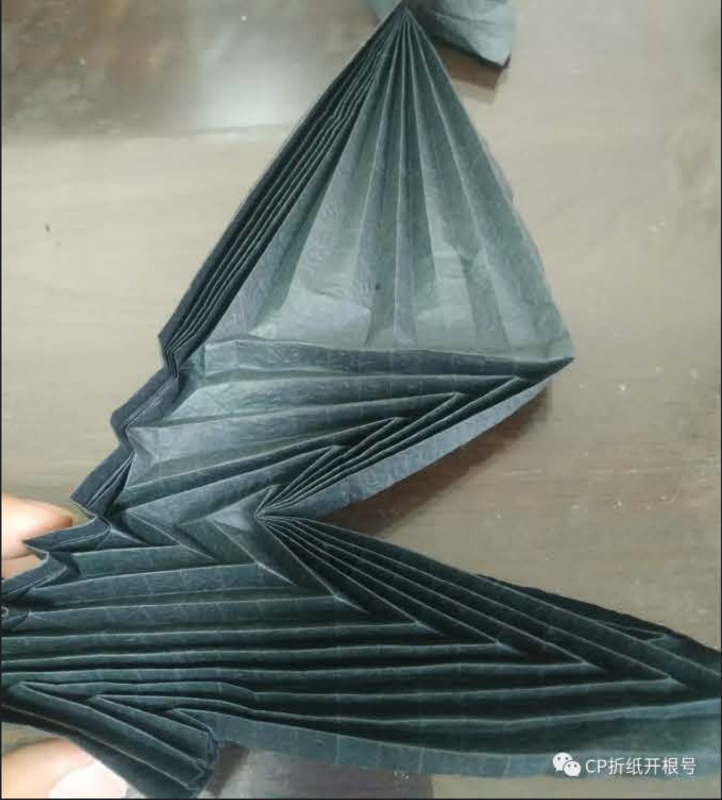




CP折纸开根号

CP折纸开根号

CP折纸开根号



CP折纸开根号

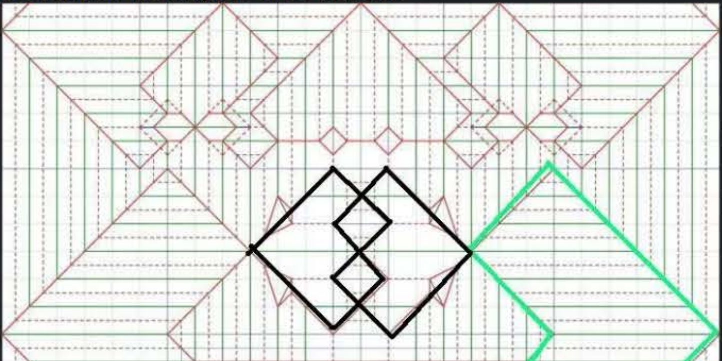
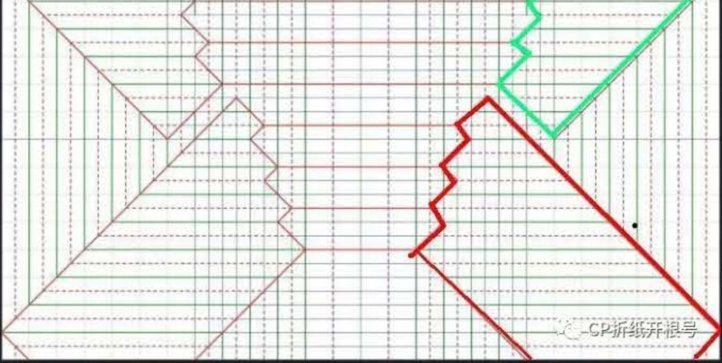
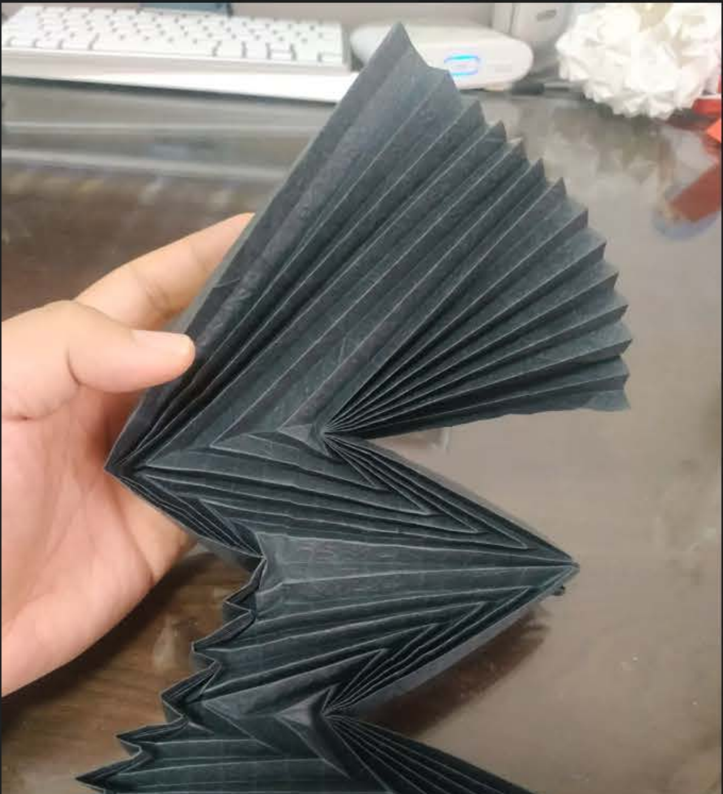
Same folding on both sides

Next, pull the middle of the green part of the aggregation again as shown in the figure below to complete the long part of the black line





CP折纸开根号



CP折纸开根号

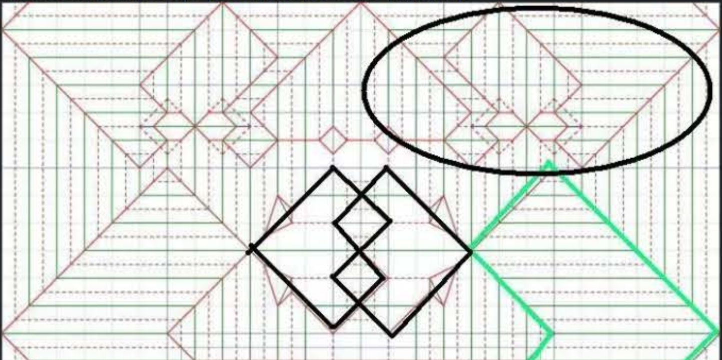
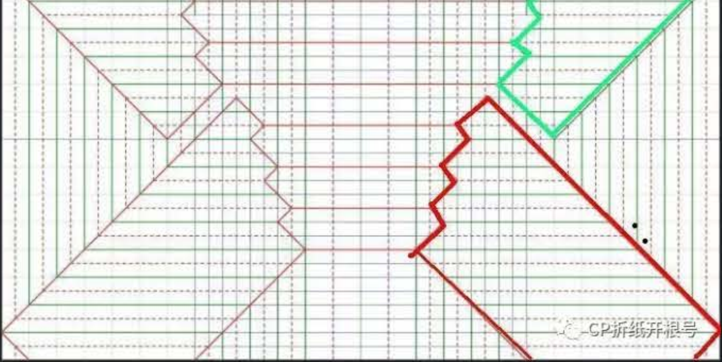
The above is the wing part of the mosquito, I believe everyone can see it
Let's review the knowledge points in this issue together.





CP折纸开根号

CP折纸开根号

My cat is a bit overwhelmed here, because I haven't care about it for a long time! !! !! !!

CP折纸开根号

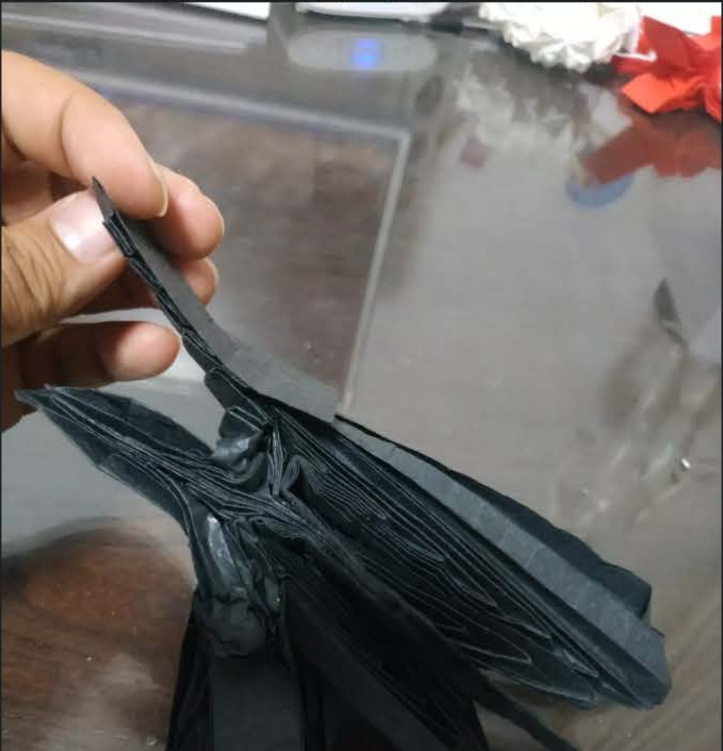
For the convenience of plastic surgery in the next step, I pulled it out again and prepared to add two paper balls into the paper layer as eyes.

CP折纸开根号

CP折纸开根号

CP折纸开根号

We don't have any place to add a paper layer below, we can reposition the branches.



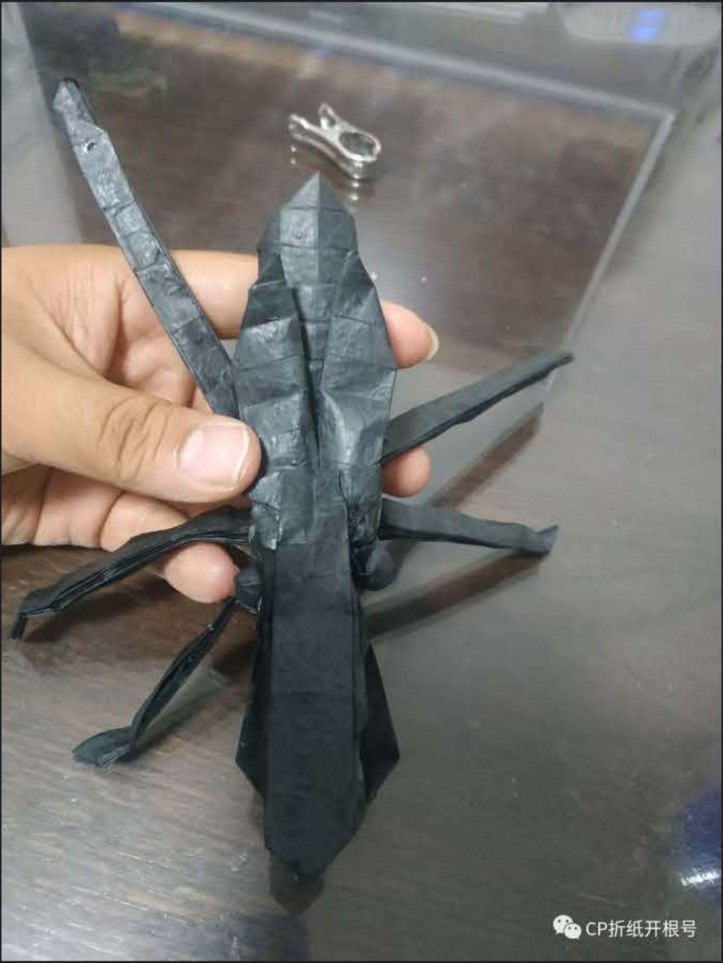
CP折纸开根号

When adding glue, pay attention to brushing the paper layer of each branch as much as possible, not too much and not too little.

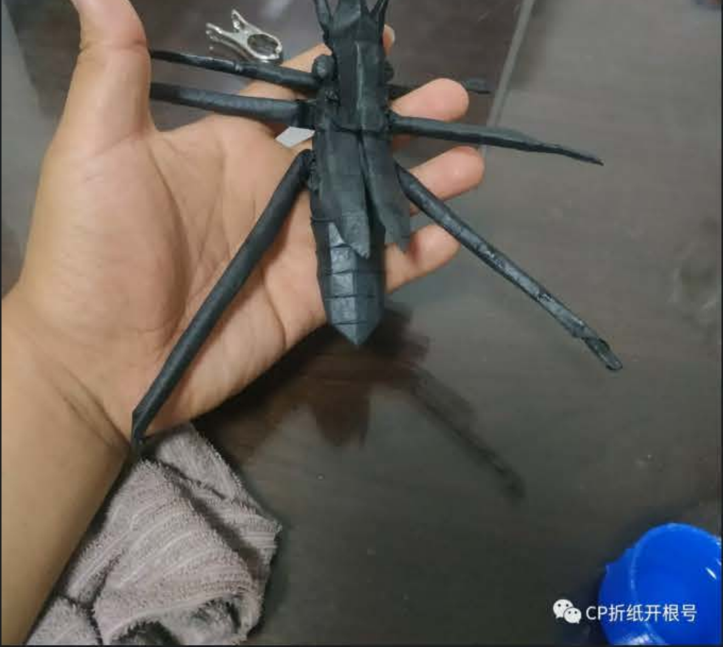
CP折纸开根号

CP折纸开根号

CP折纸开根号



CP折纸开根号



CP折纸开根号

Hand kneading paper is slightly skinny. You can see it every time you add glue, but it doesn't matter. Most importantly, you can gather it out, shape it, and it will slowly.

Well,
That's it for this issue!
See you next time!
