

Here goes!

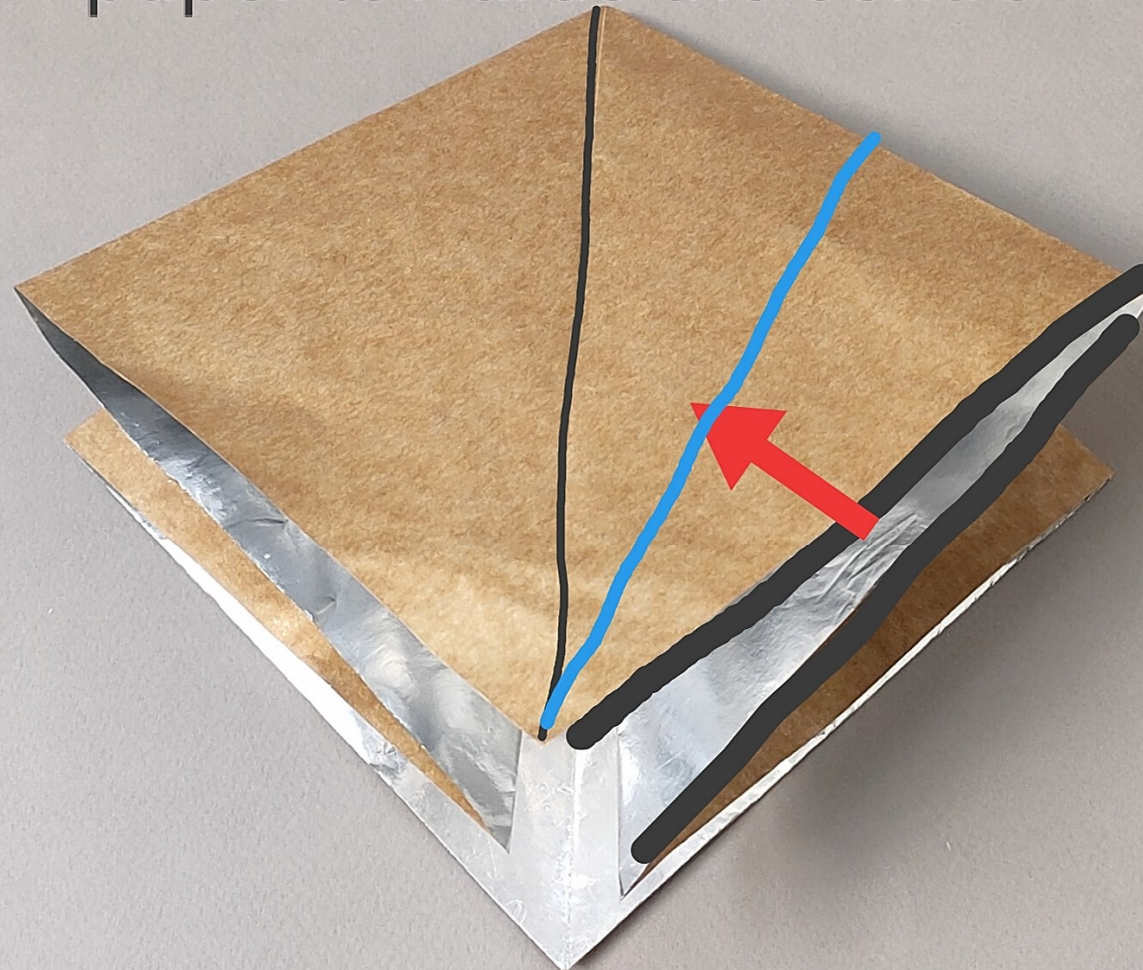

I recommend using a foil type
paper for this model.

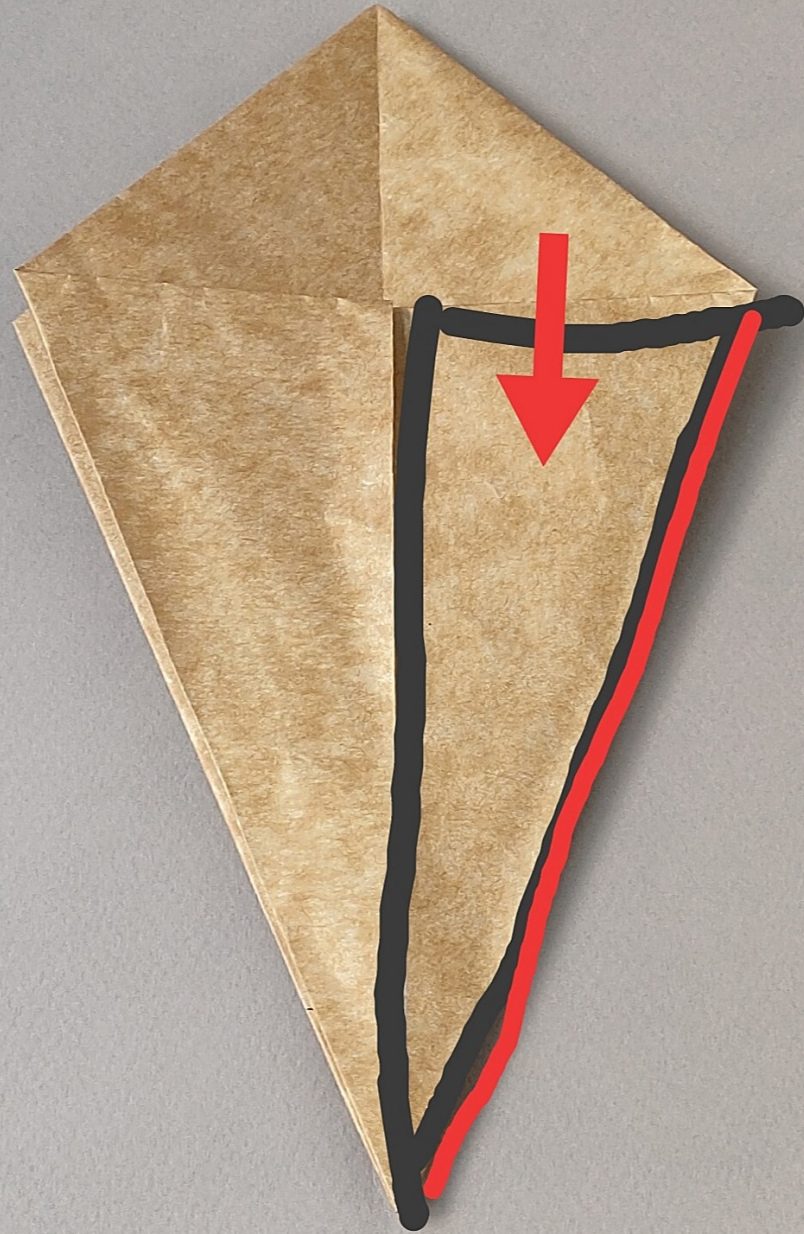

Fold in half in all directions and
collapse along these lines

Like so.
Now, fold the edges of the
paper towards the centre...

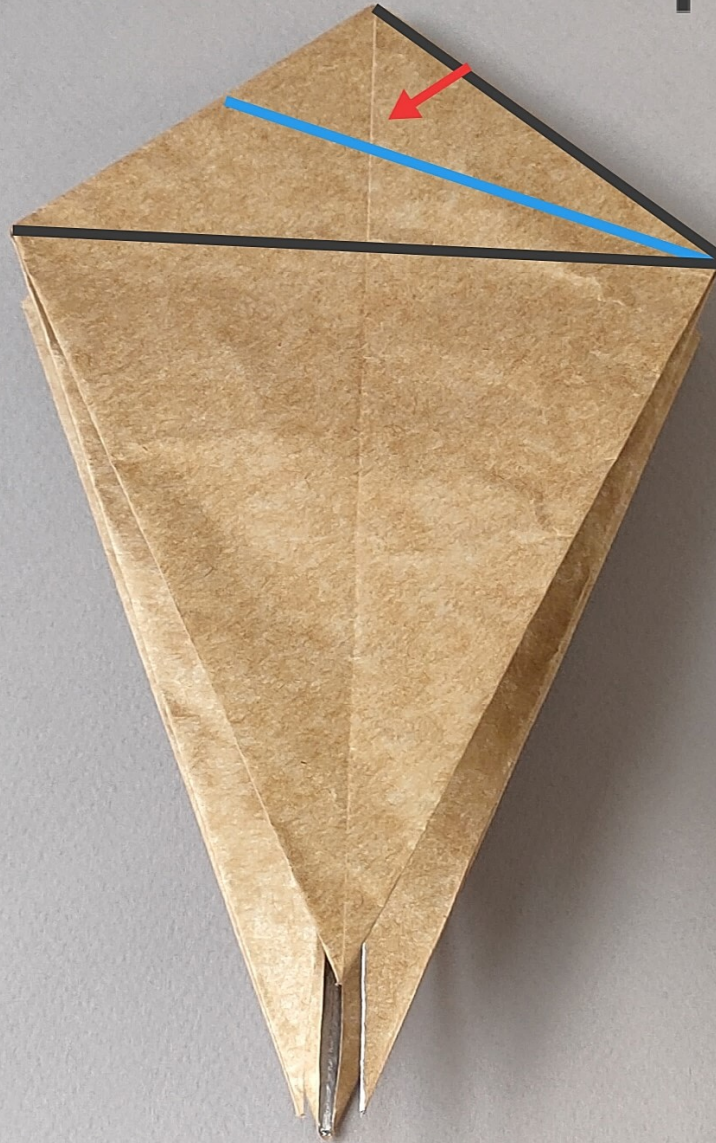

... Like so.

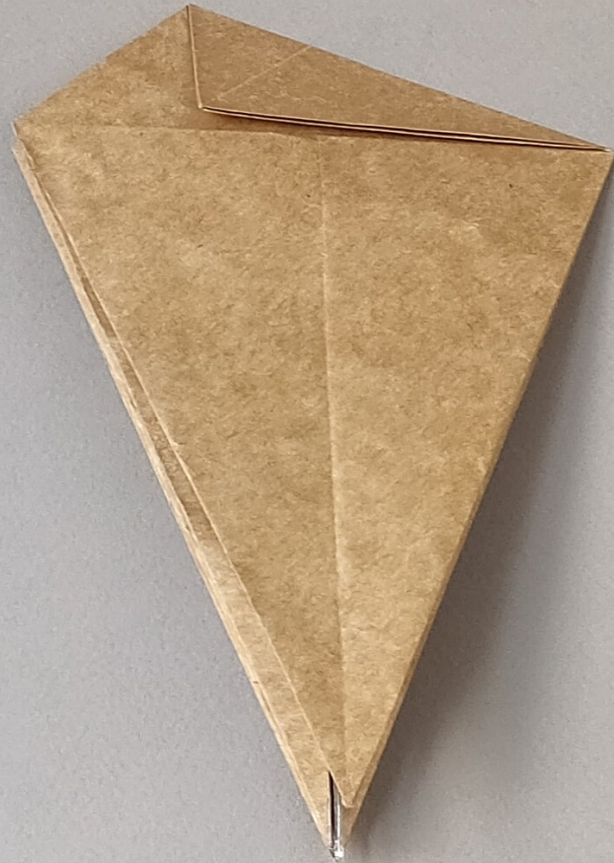

Now reverse
fold all of these
flaps

Bird base complete.

Now crease
as shown

Now unfold and repeat
on the left

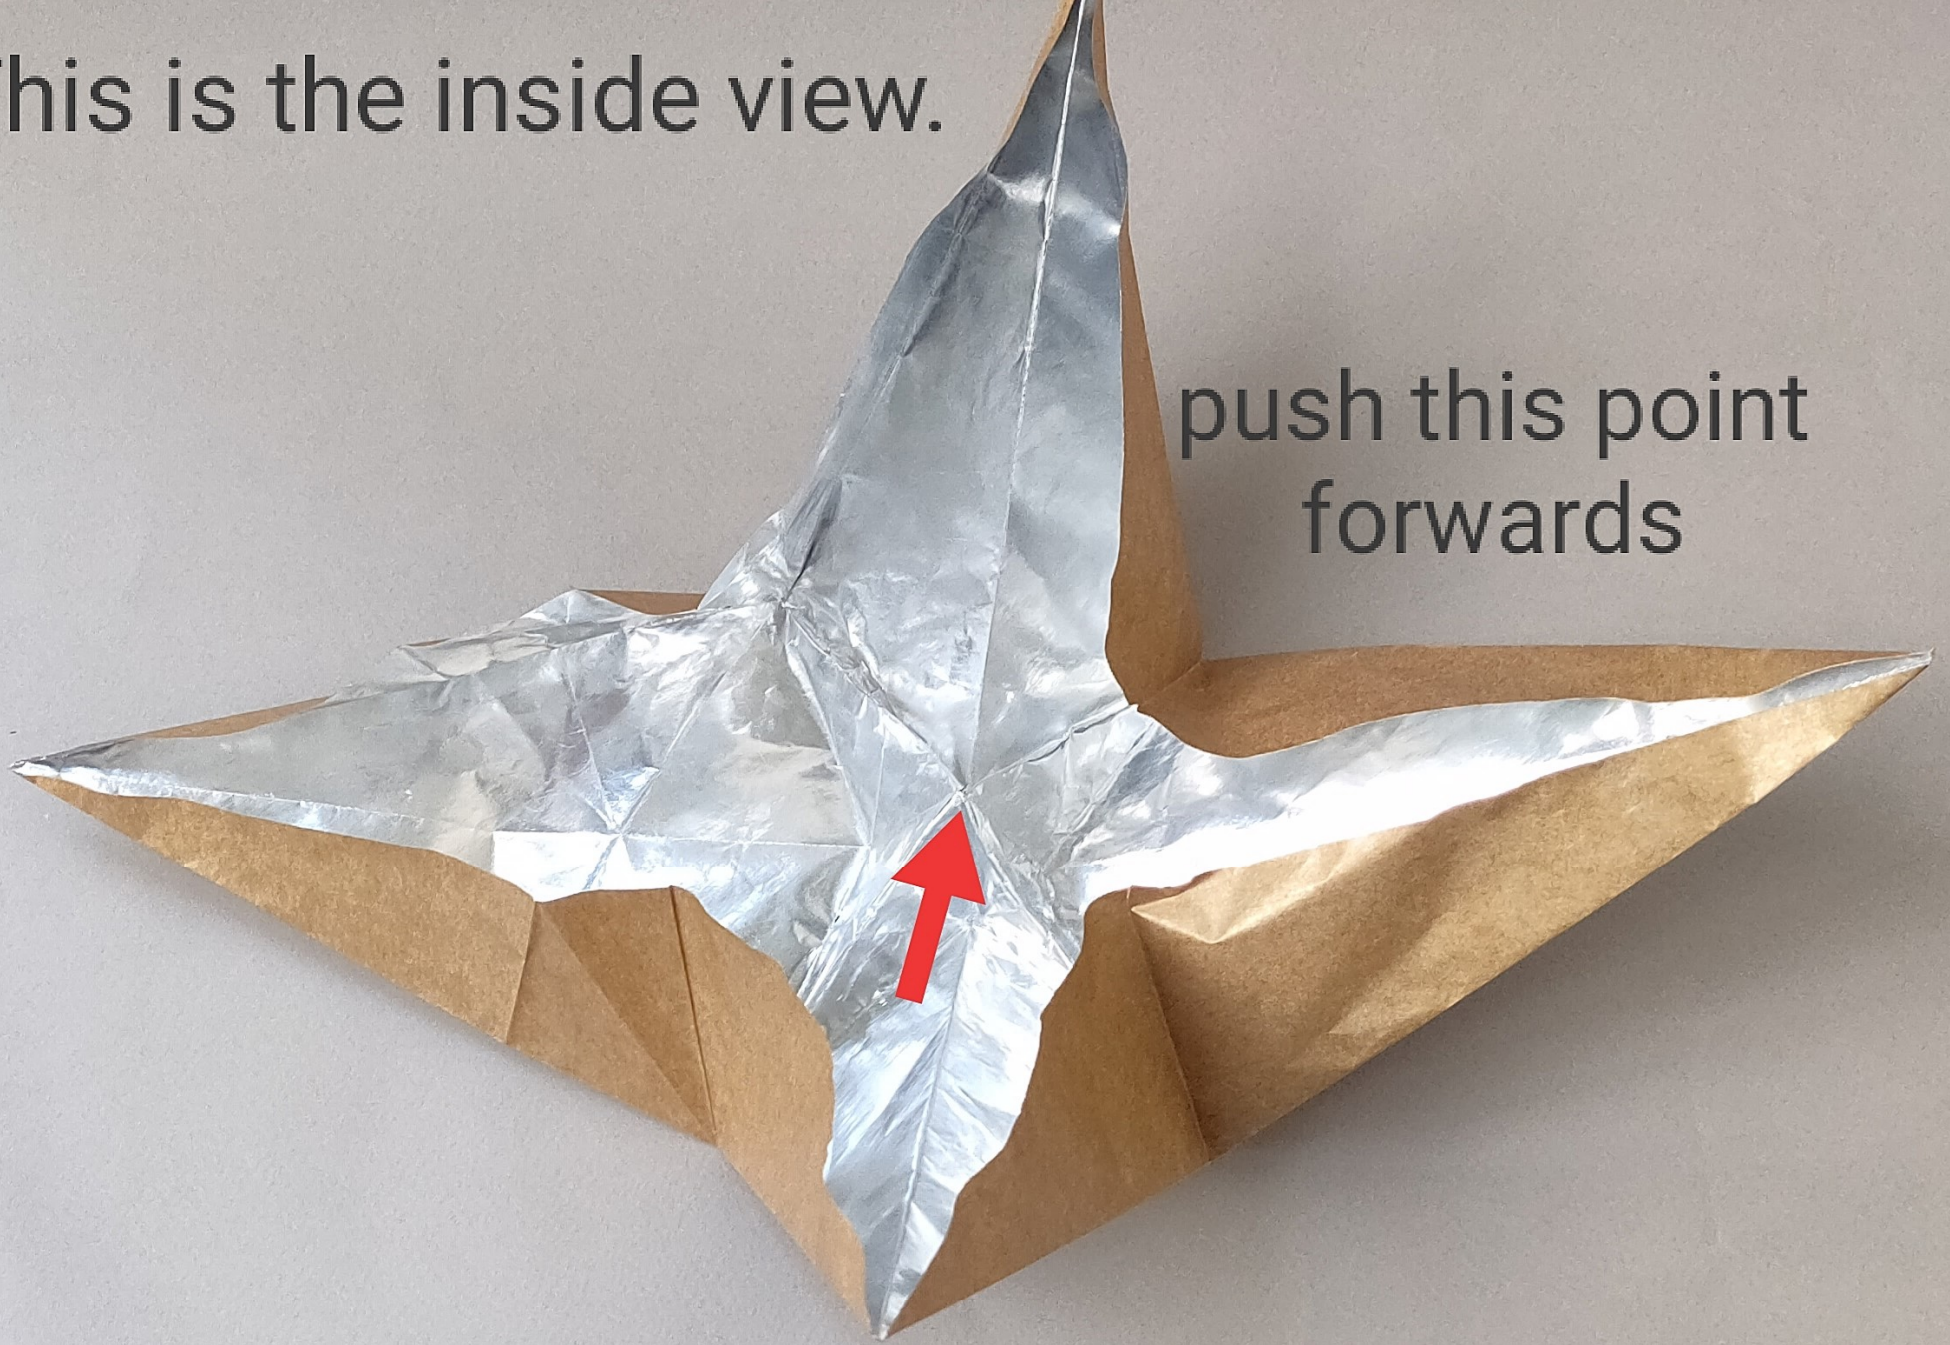

It's sinkin' time

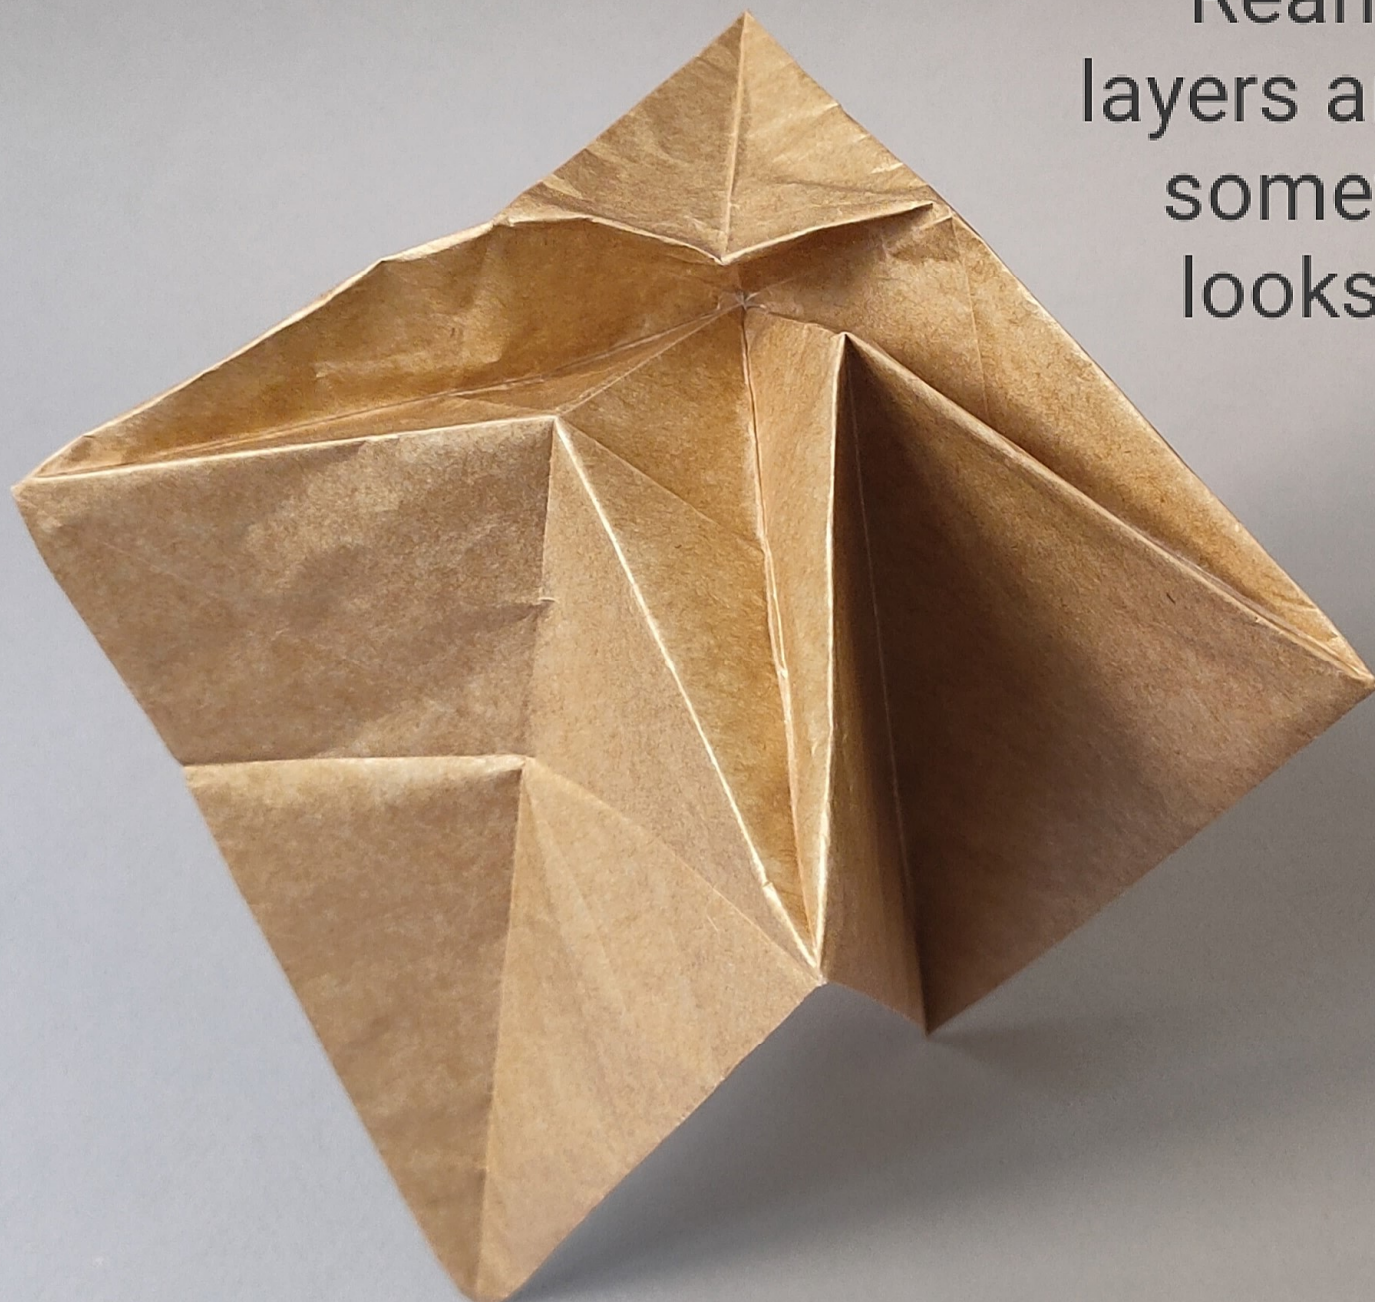

outline these
creases as
mountains on
all four sides
to begin

This is the inside view.

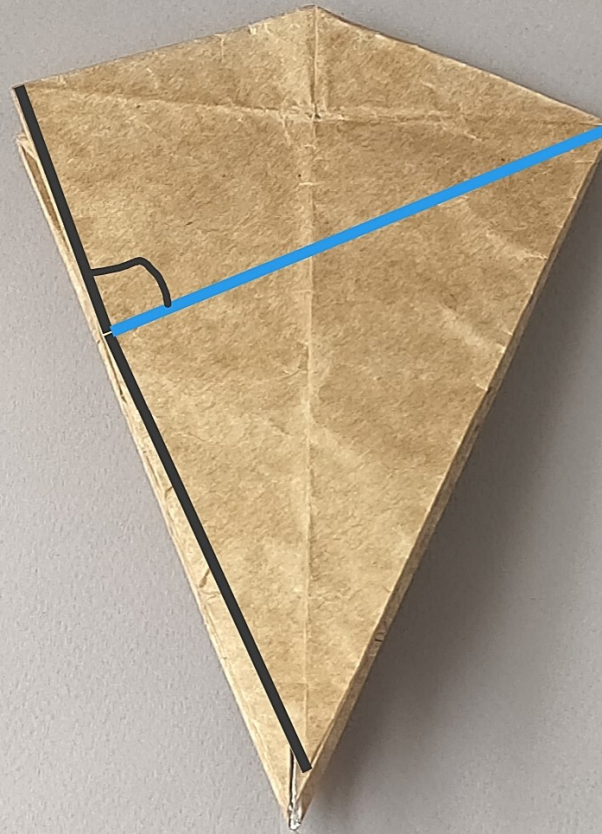

push this point
forwards

Rearrange the
layers and you'll get
something that
looks like this.

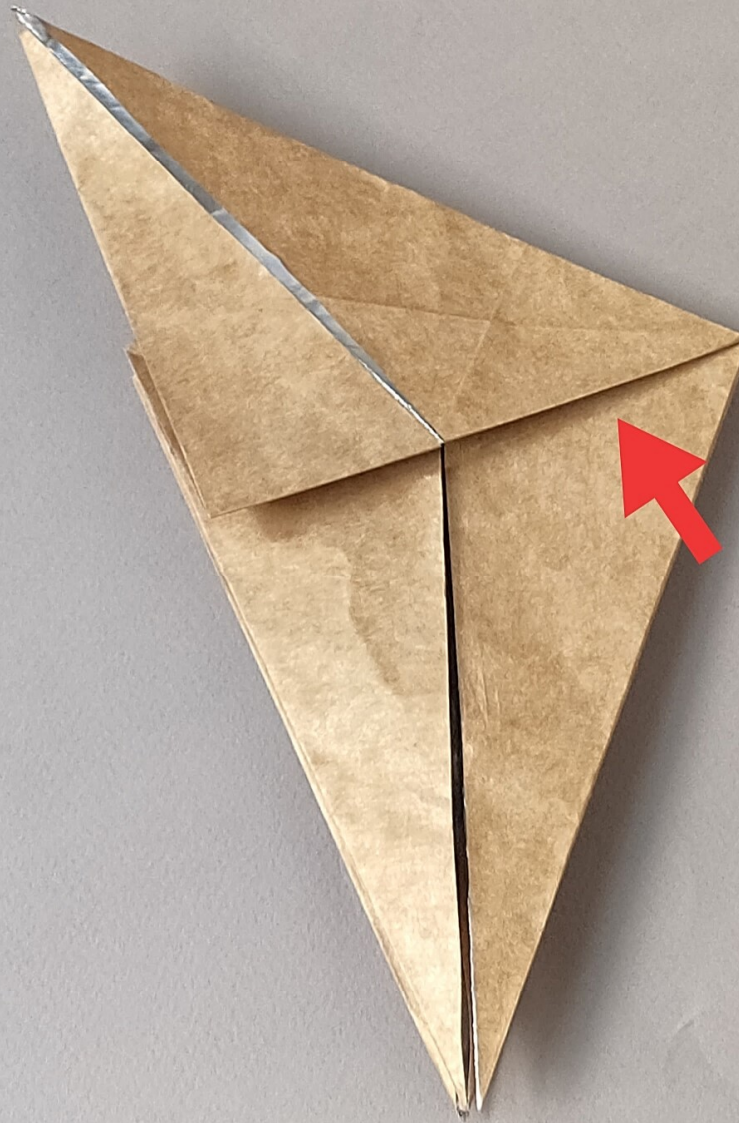

And flatten

Now align these
two edges and
crease

Like so

Now pull out some
paper over here

In progress...

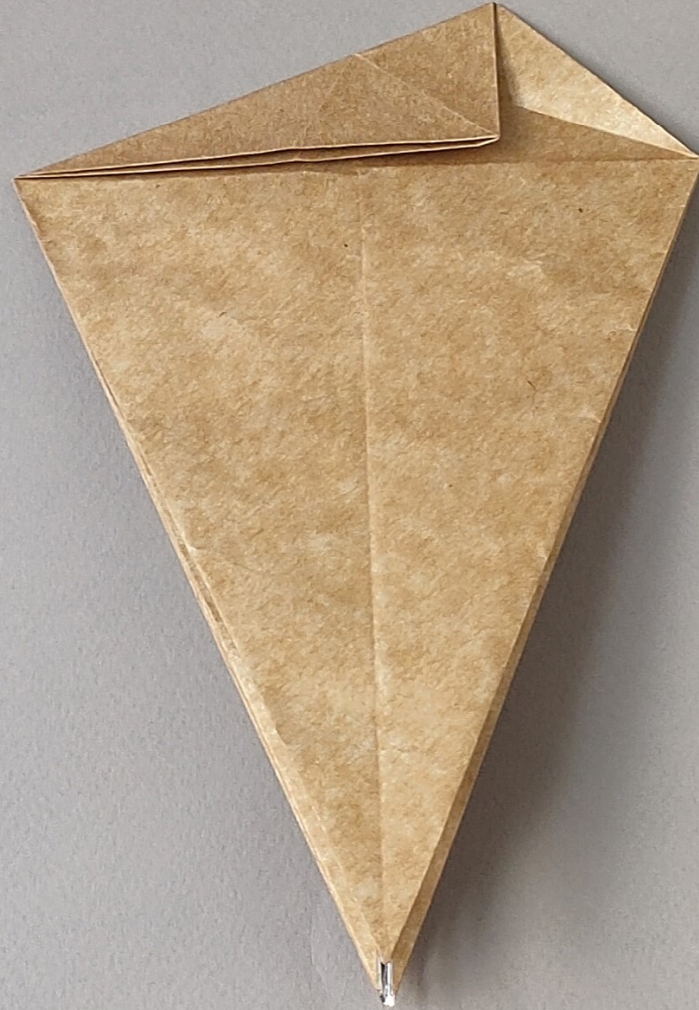

...And flatten

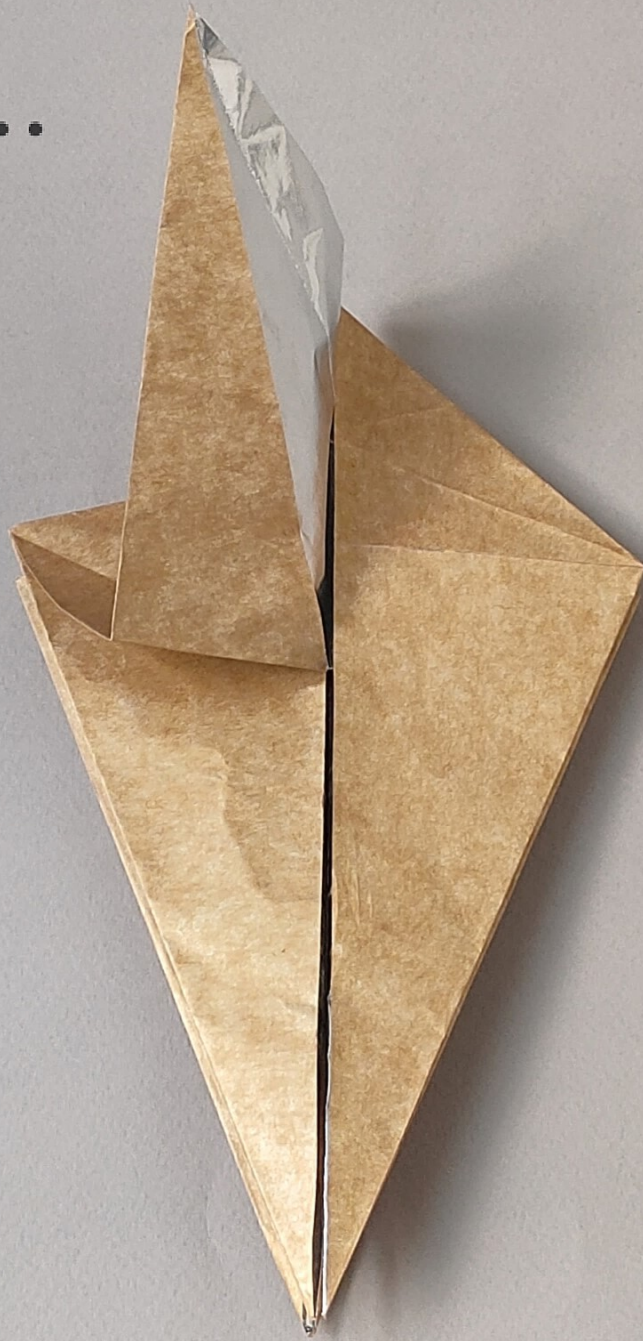

Now pull the
flap to the right

Unfold

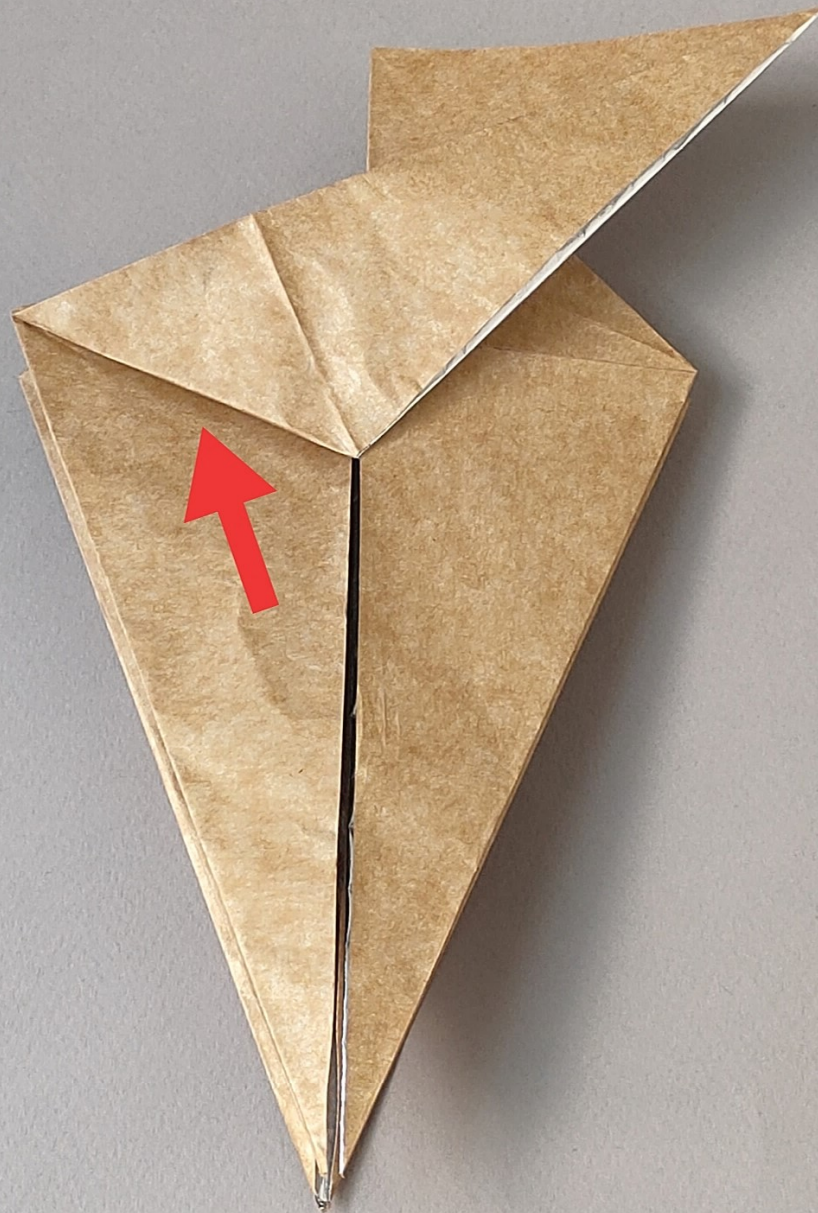

In progress...

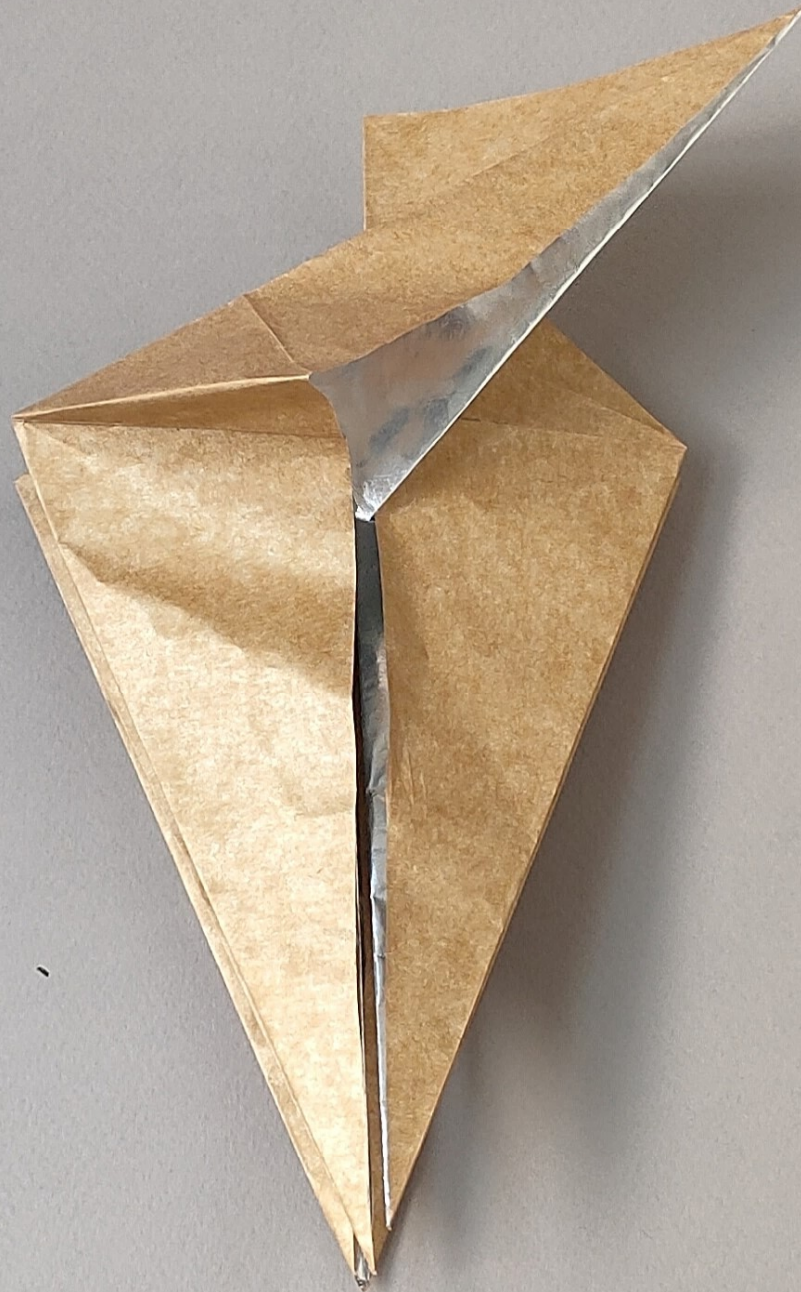

And flatten.

Now pull out
some more
paper over here

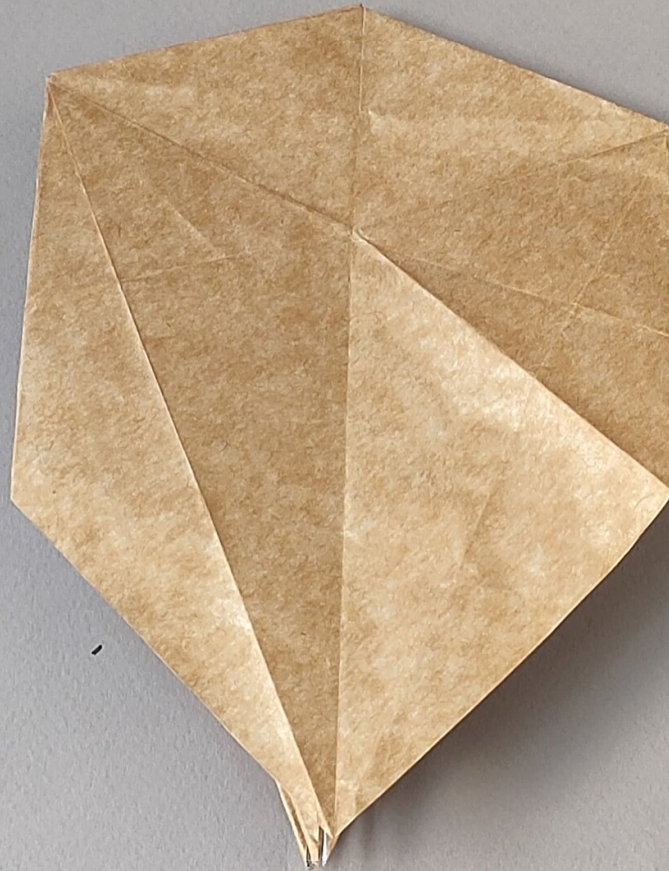

In progress...

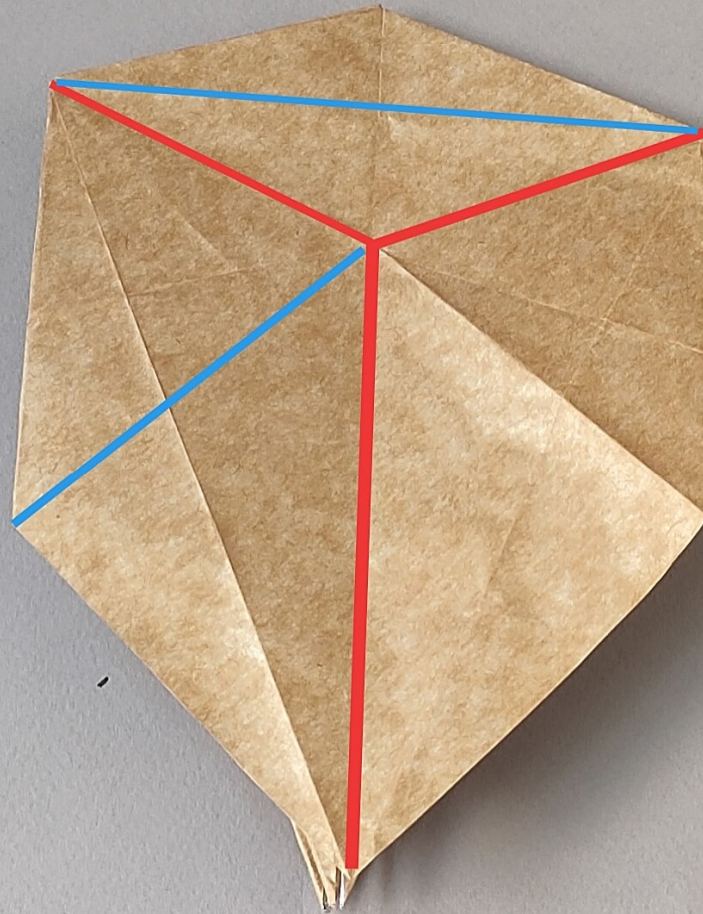

Nice. Now unfold...

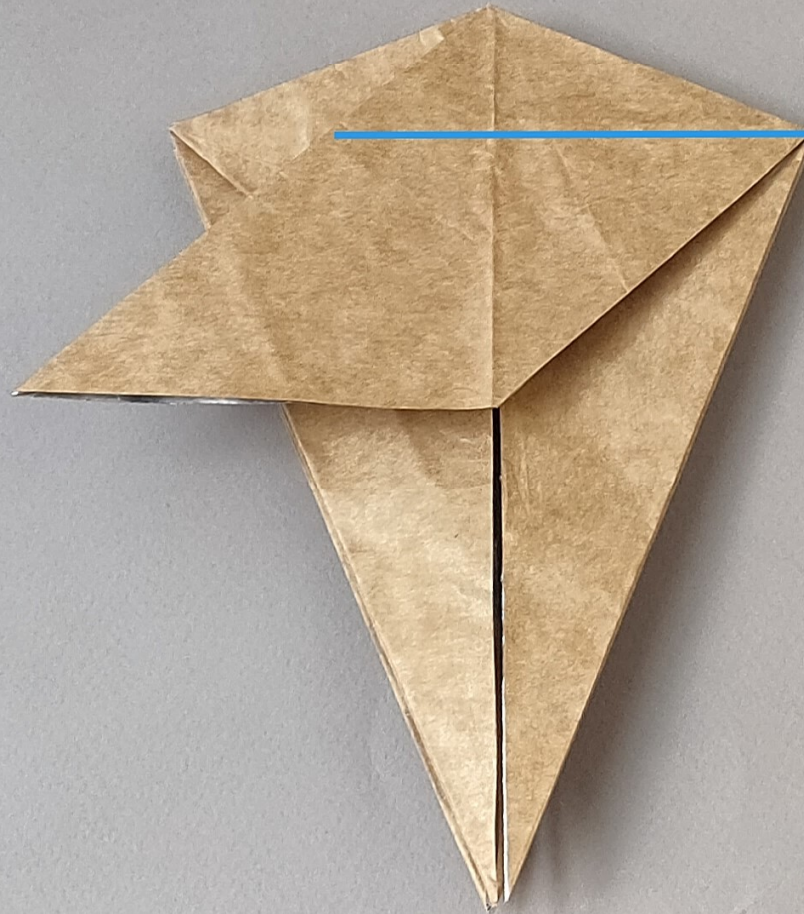

Like so.

Now collapse along
these lines

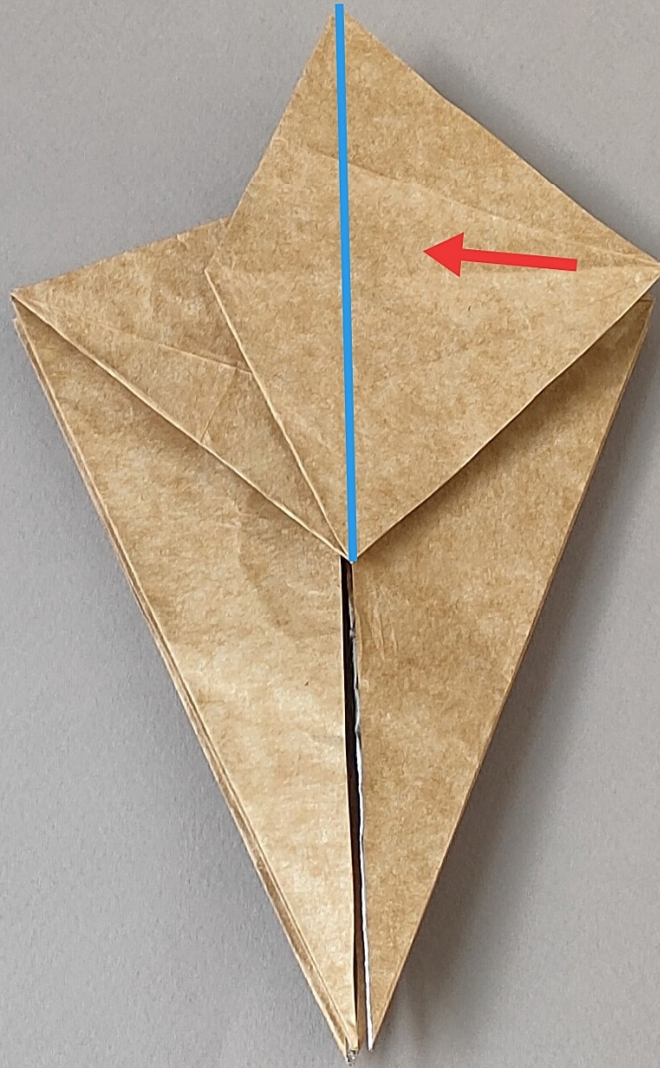

Fold up...

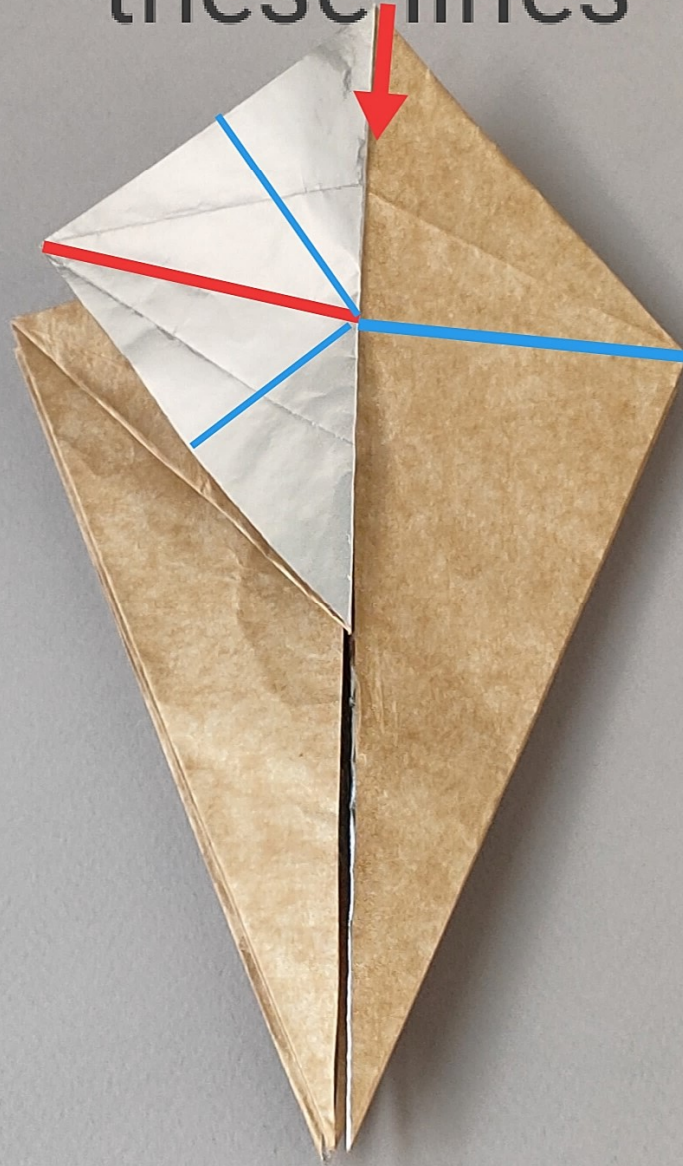

And crease
along these lines

Fold the flap to the left

Now collapse along
these lines

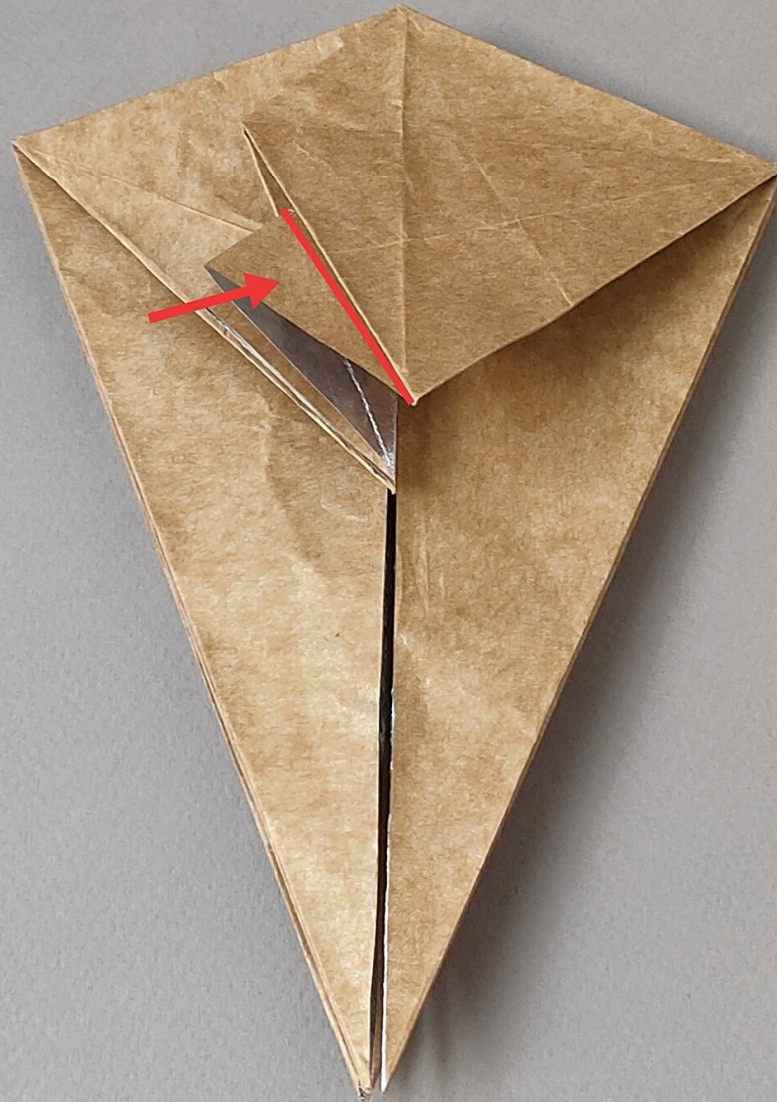

In progress...

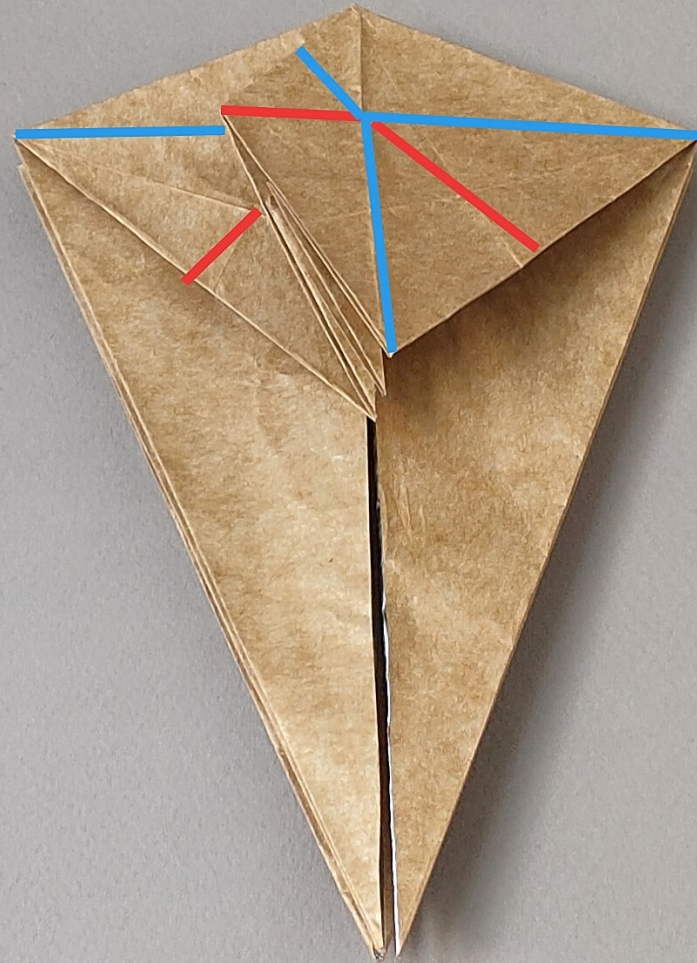

And flattened.

Now inside
reverse fold
these flaps

Nearly there! (sort of)

Collapse along
these lines.

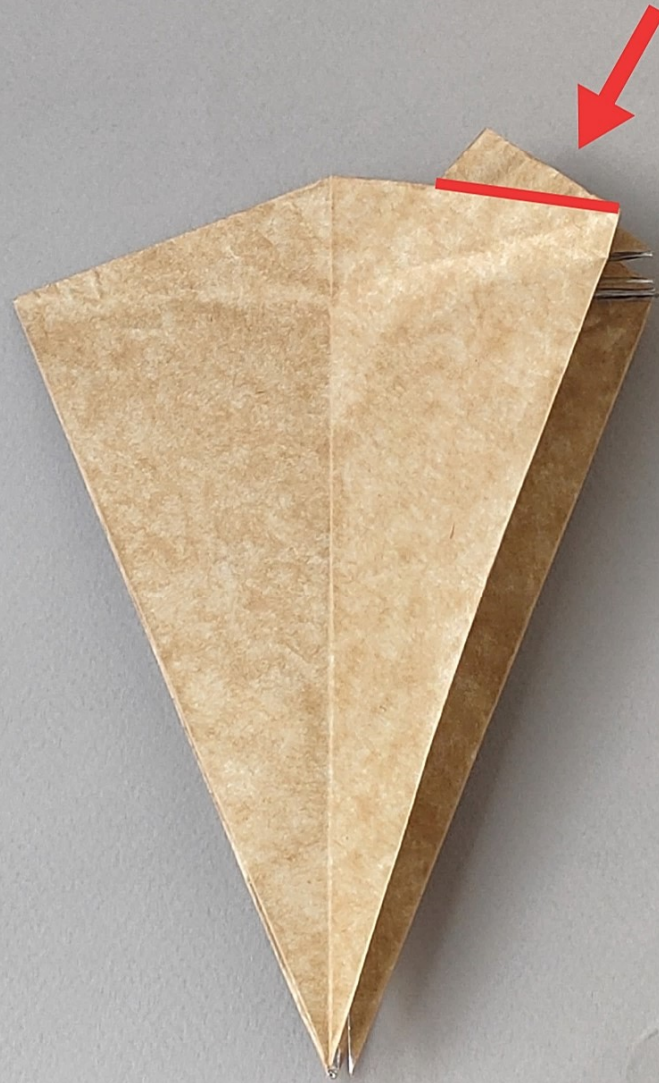

In progress...

...

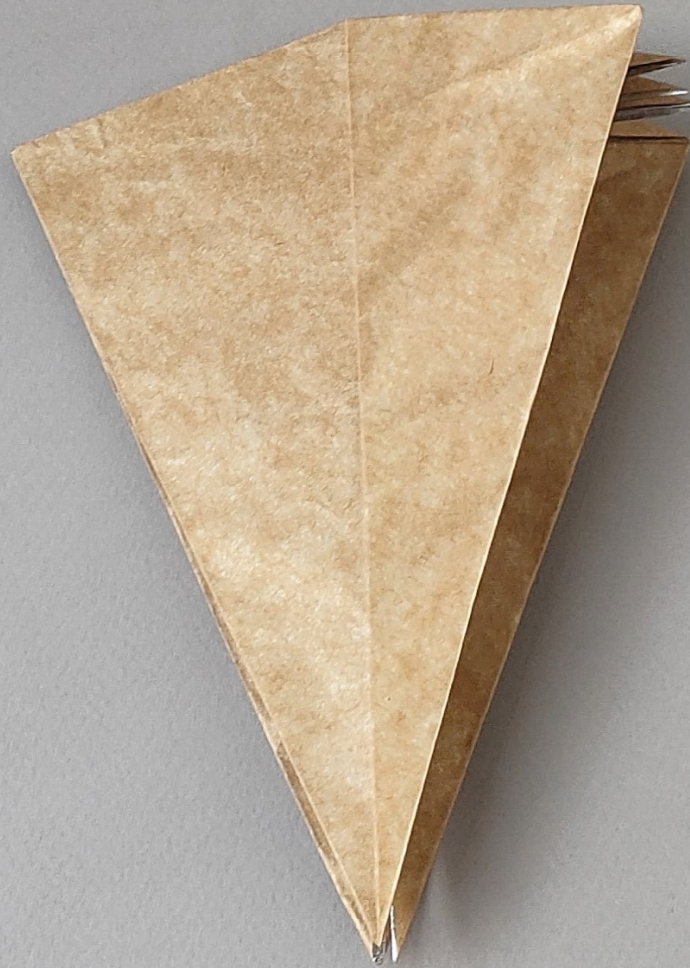

And flattened.

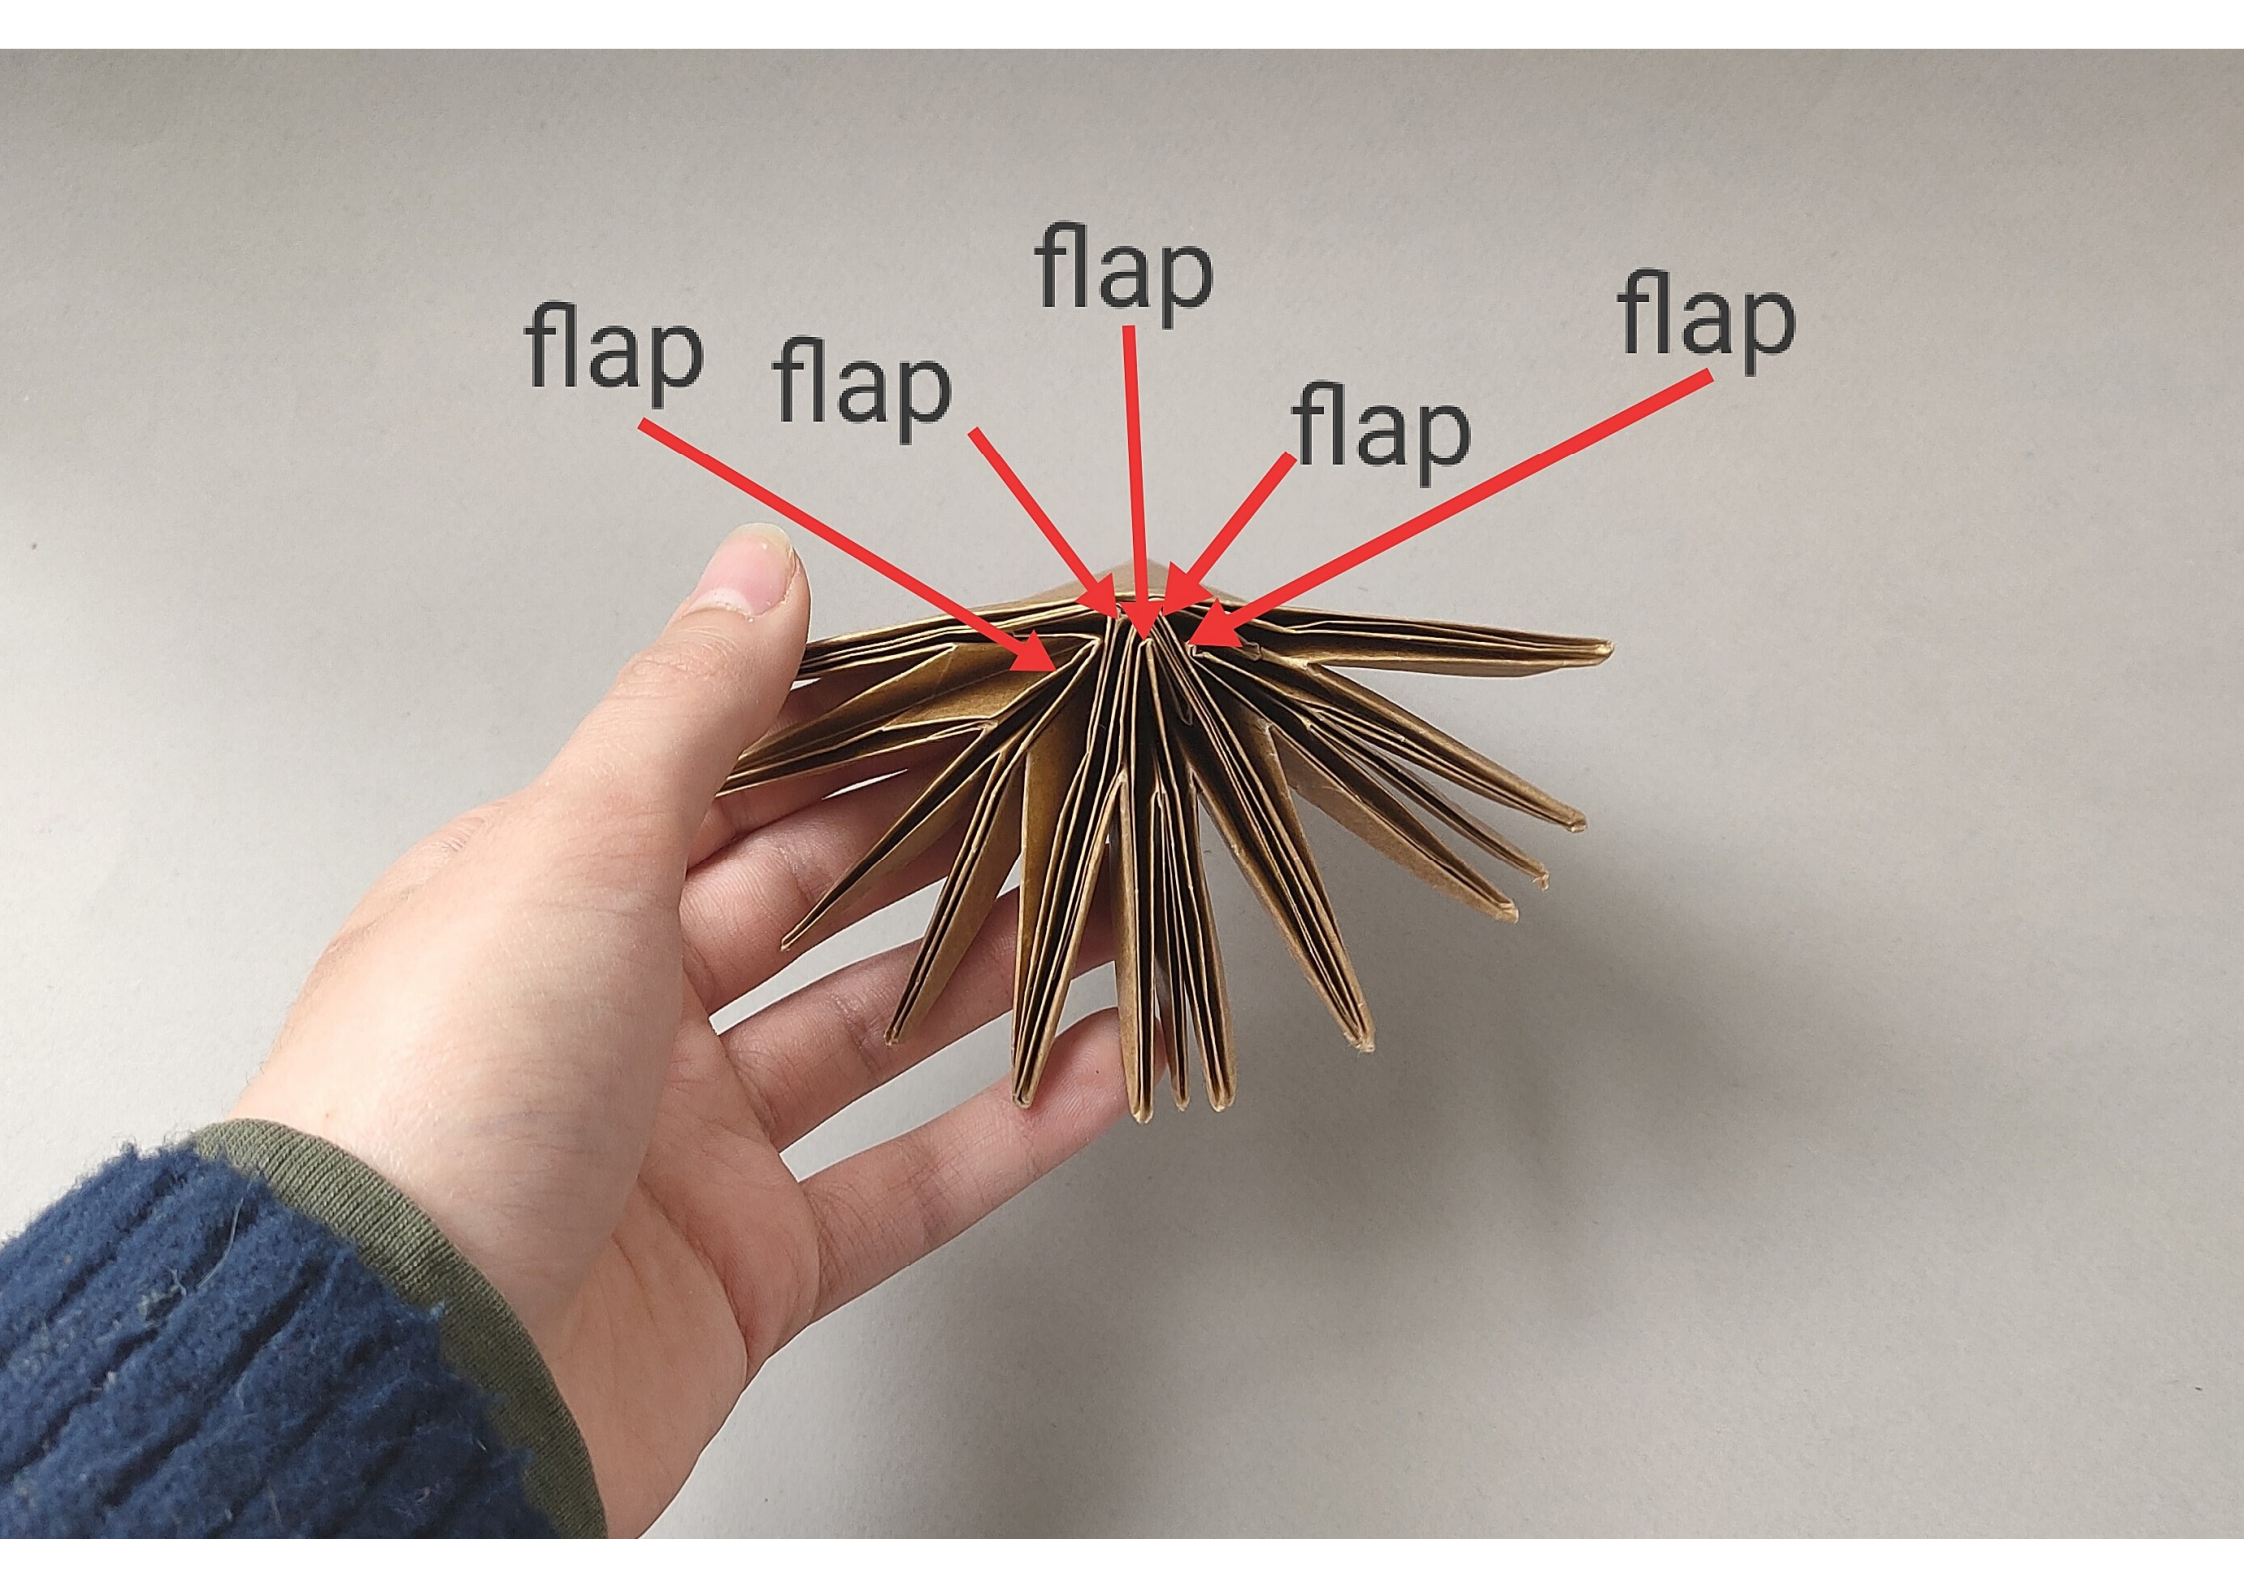

Now inside
reverse fold
these flaps

Nice!

Now repeat on
the two flaps
either side (lol)

NOTE: leave one
flap untouched -
this will be the
shell.

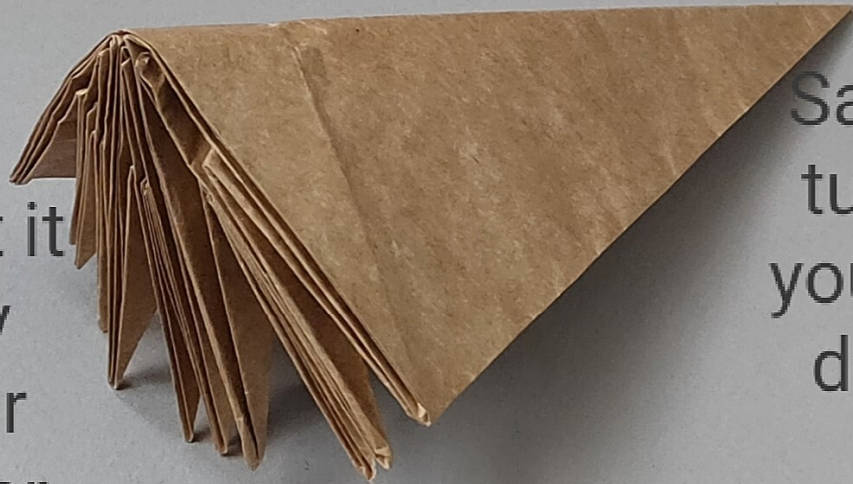

flap flap flap flap flap

Time to shape!

I'll be using Tomoko fuse's design for the shell.

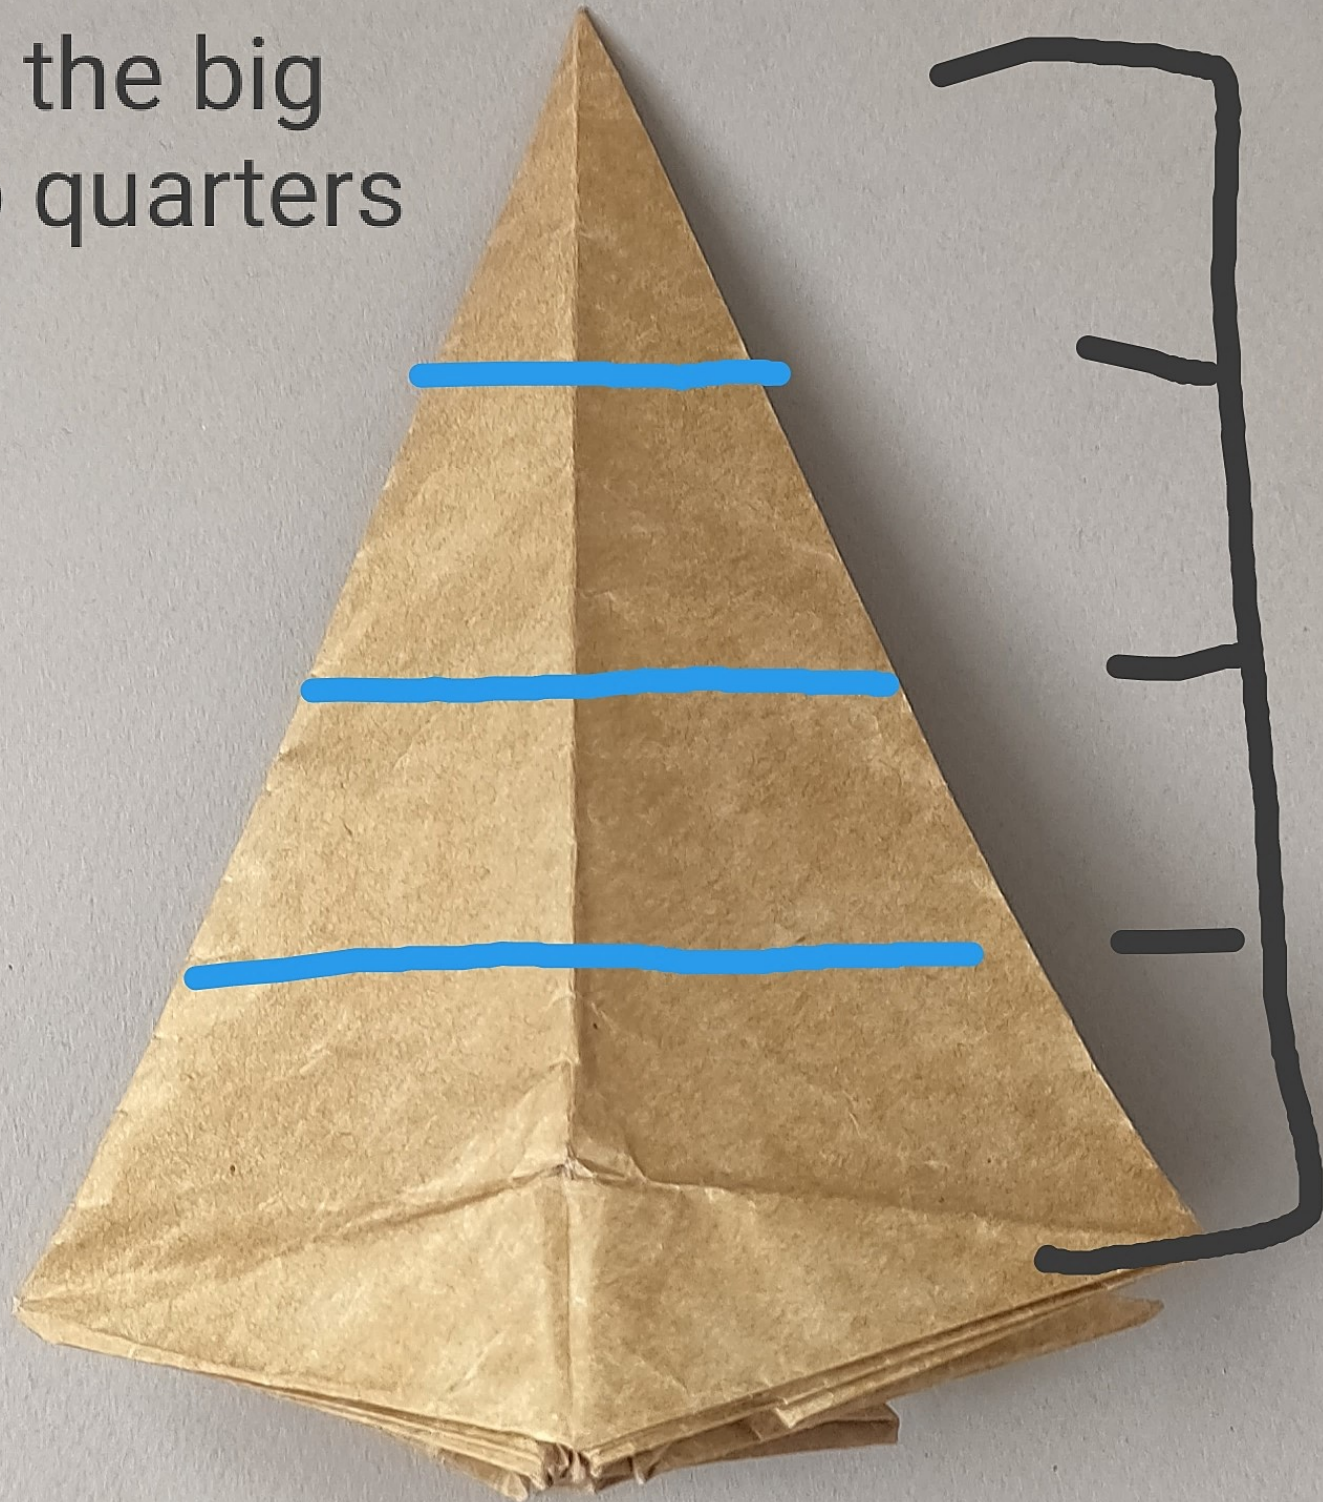

I'd also like to say that it would be completely possible to get colour change on the shell for this model, I just can't figure it out. If you'd like to try, I'd love to see what you come up with!

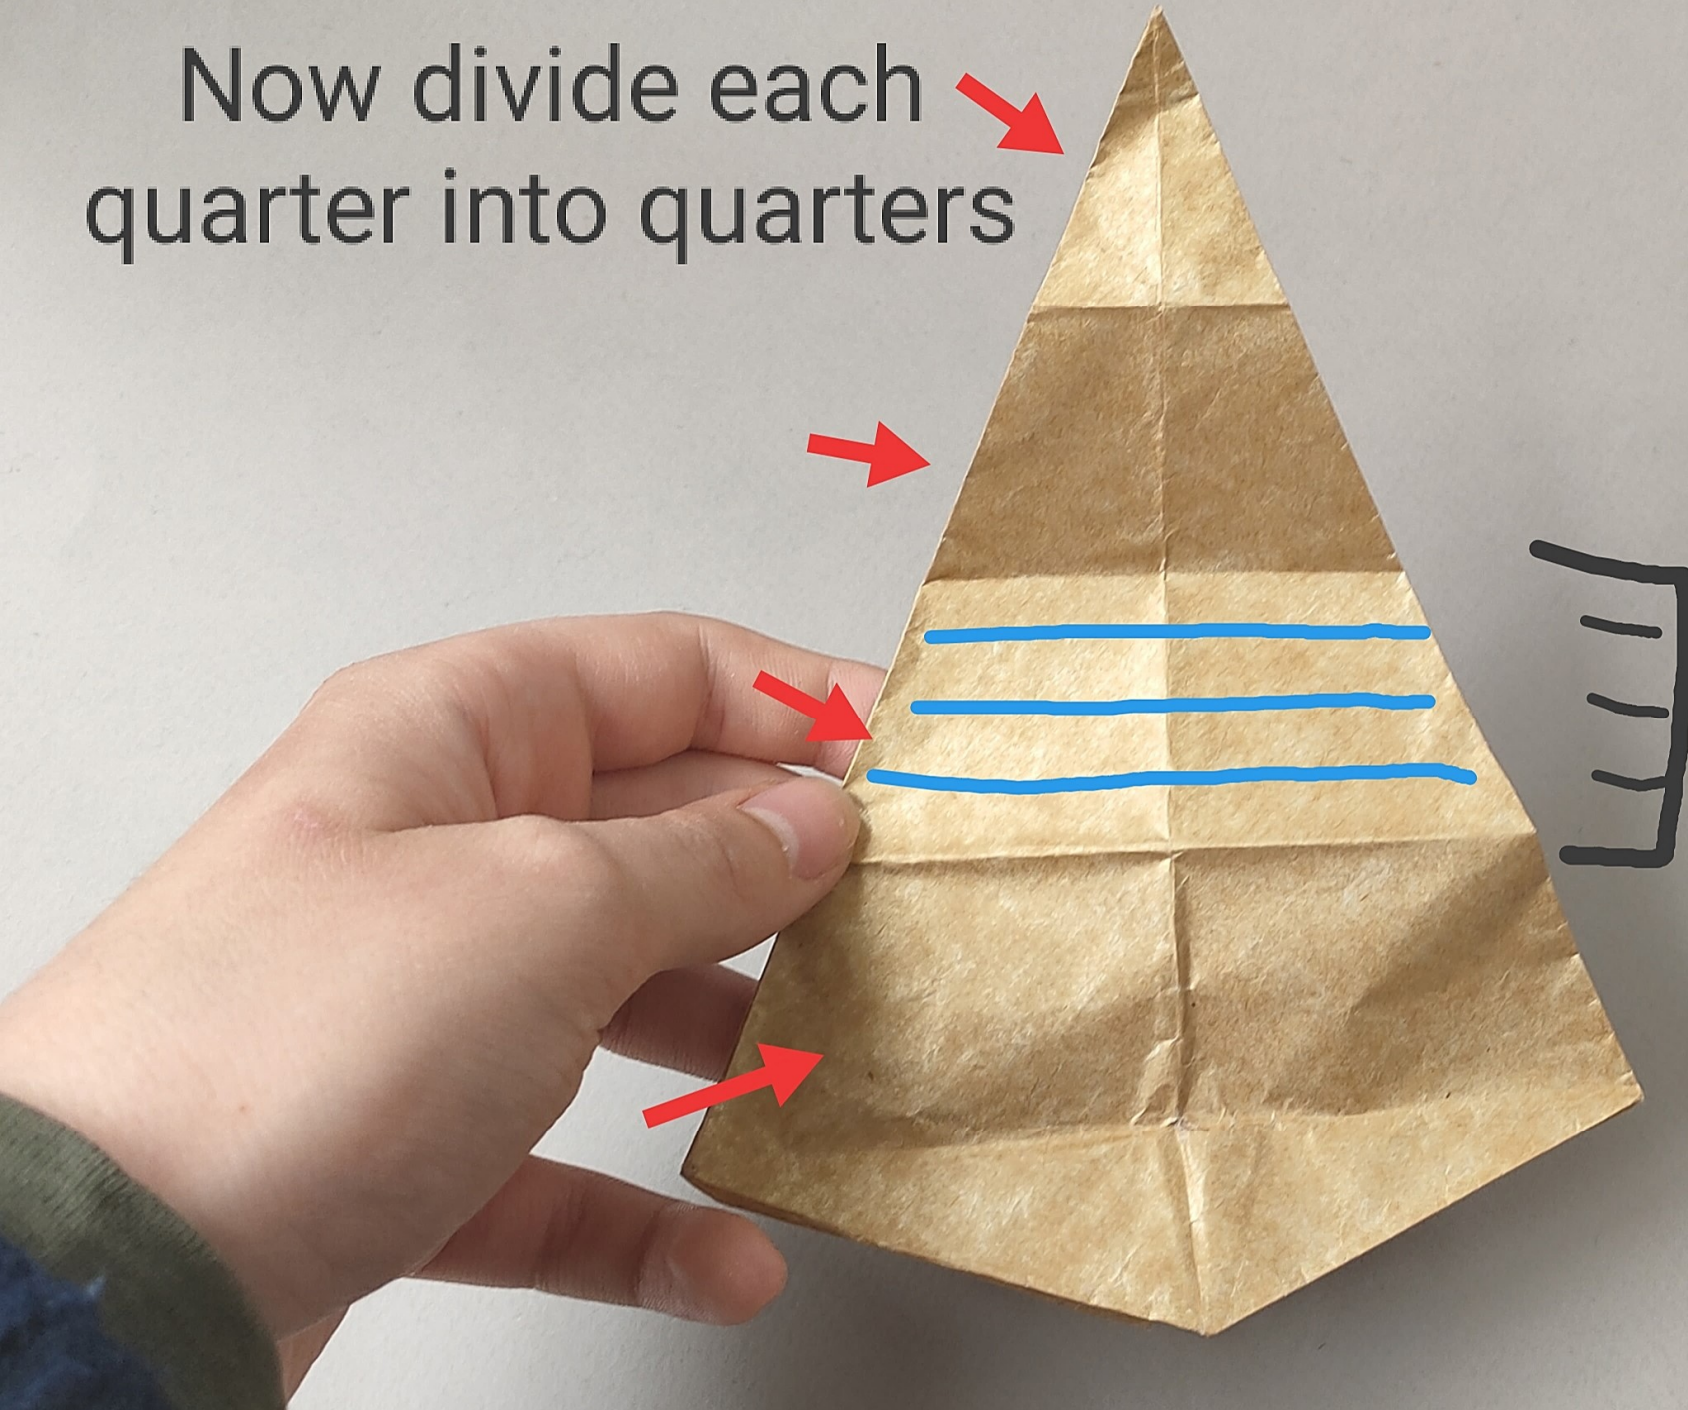

If you want to use another shell design then I would recommend Satoshi Kamiya's turban shell, but you could use any design you like.

Anyway, let's get started

Divide the big
flap into quarters

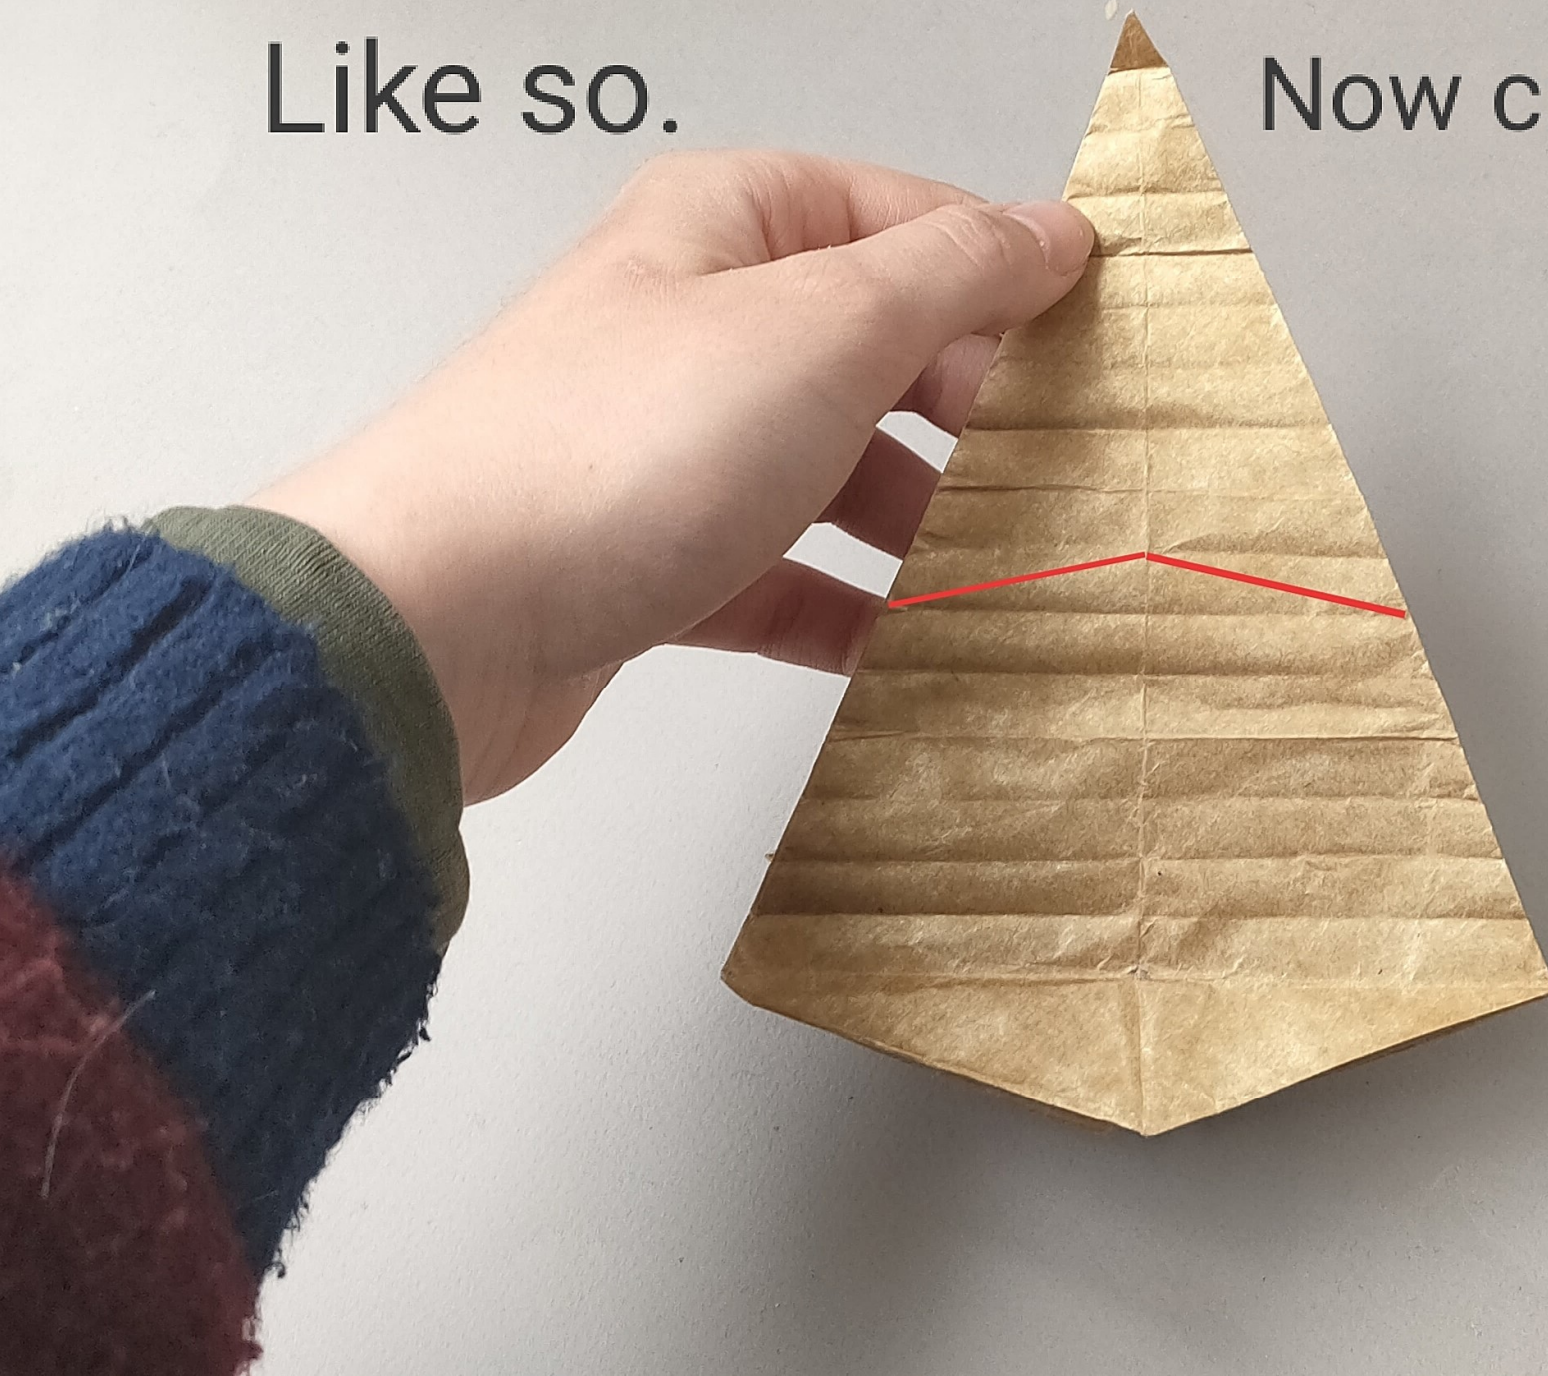

Now divide each
quarter into quarters

Like so.

Now crease like this

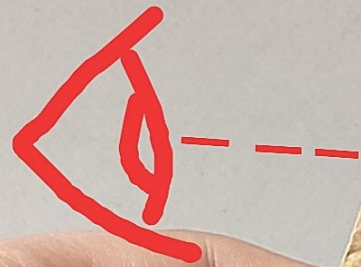

Repeat these creases
on every segment

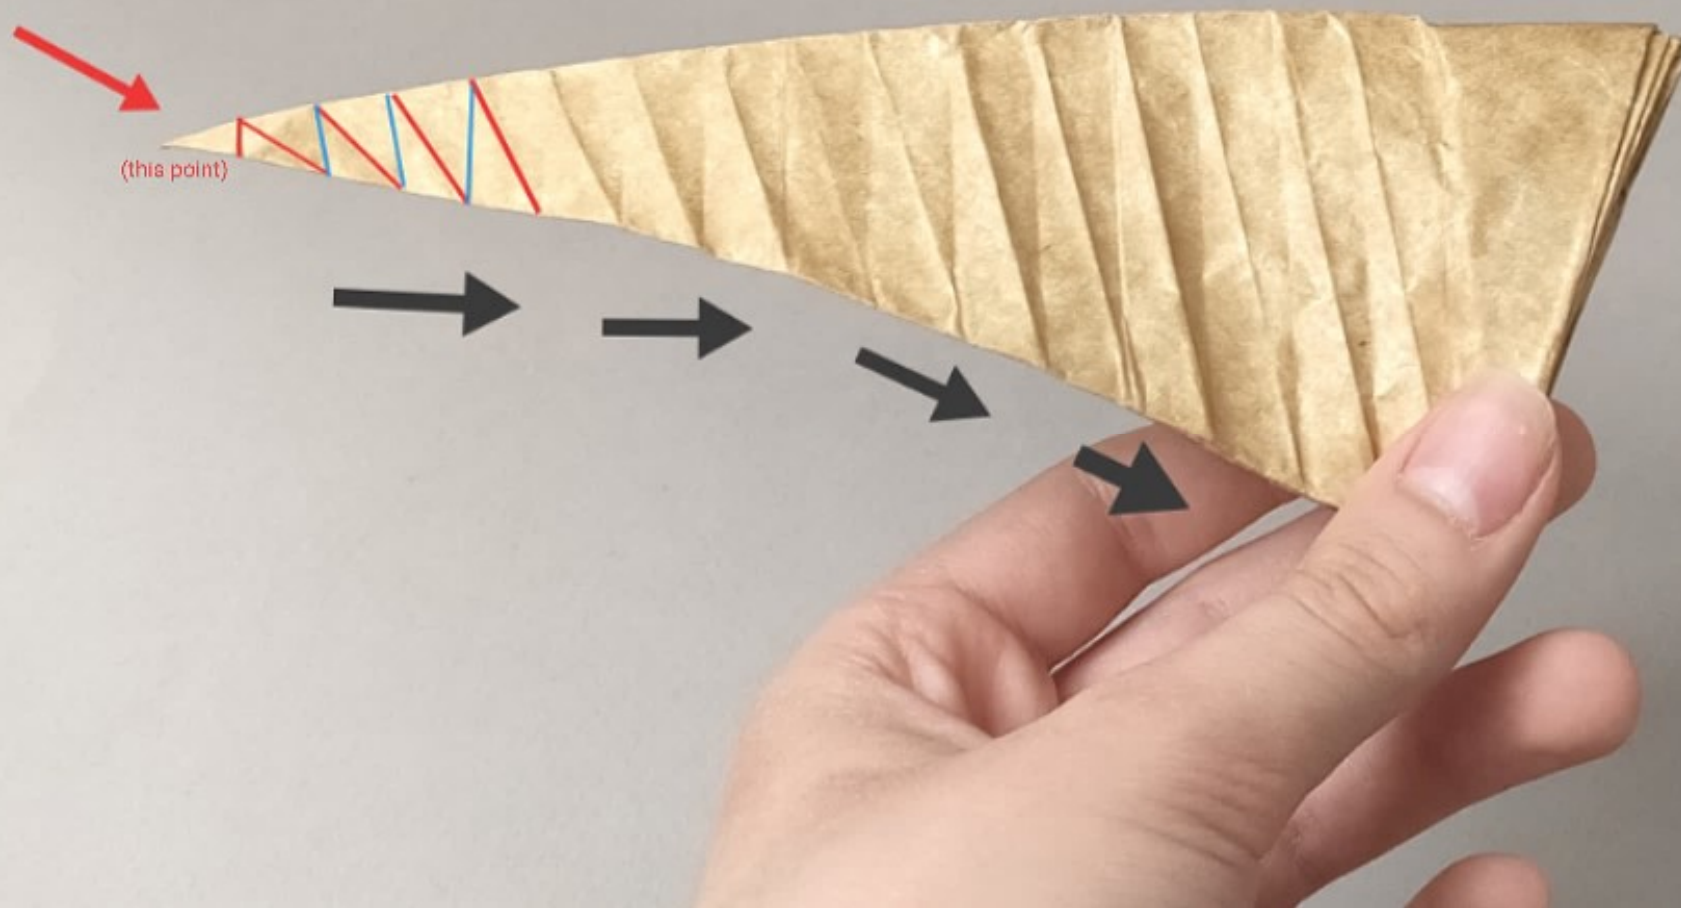

:lmoa:

Fold in half and
look side on

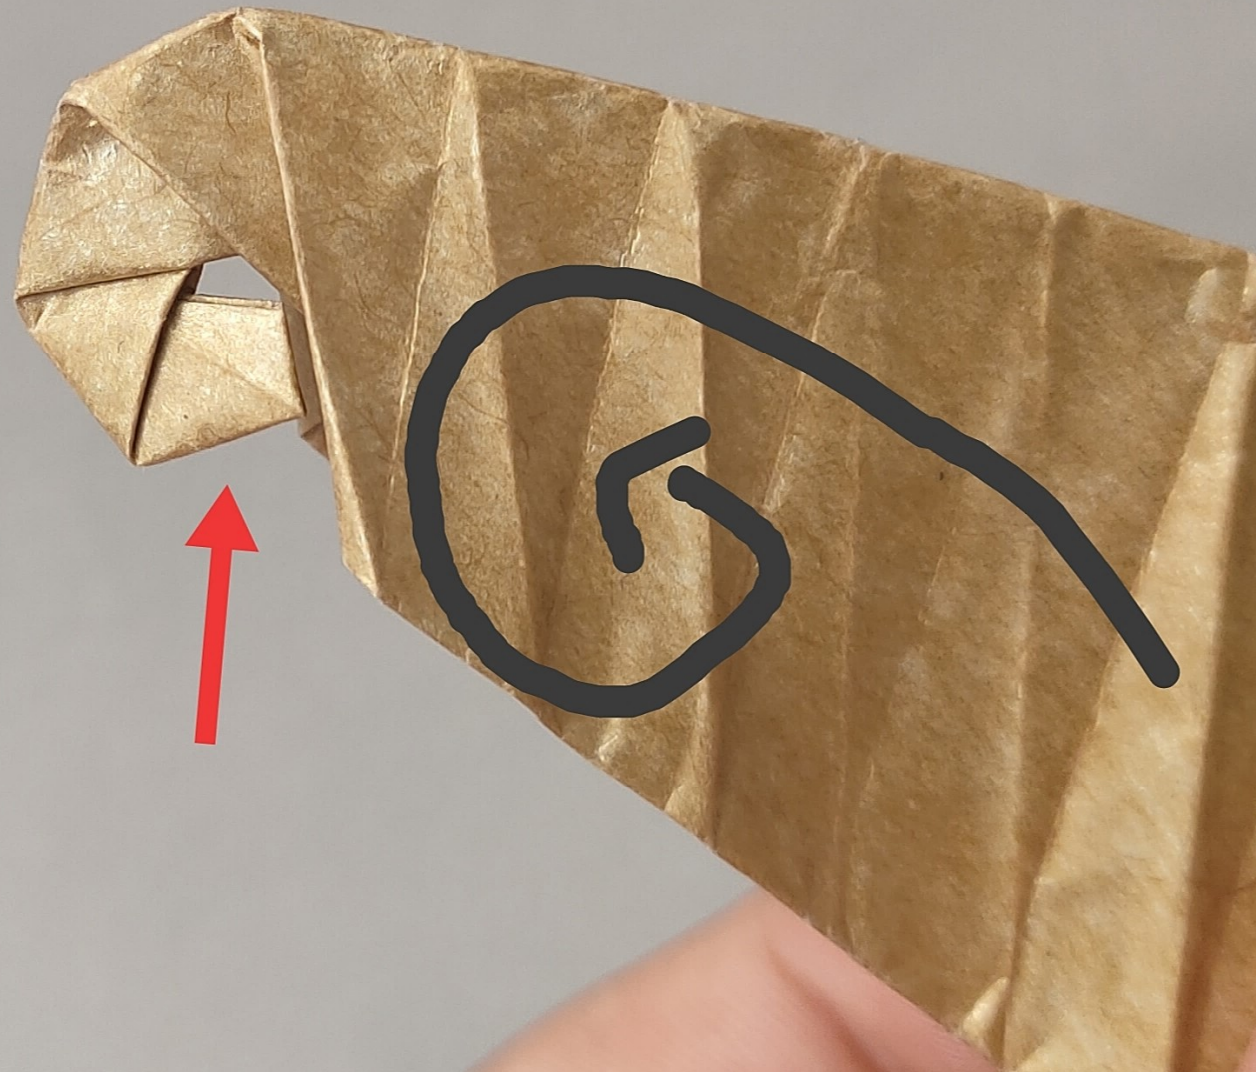

Fold this point inside
and collapse along
these lines

In progress...

Nice. now keep
collapsing like this all
the way down the
shell, making sure to
keep this point Infront
of all the layers

Nearly there! Try
to tuck this edge
inside the pocket

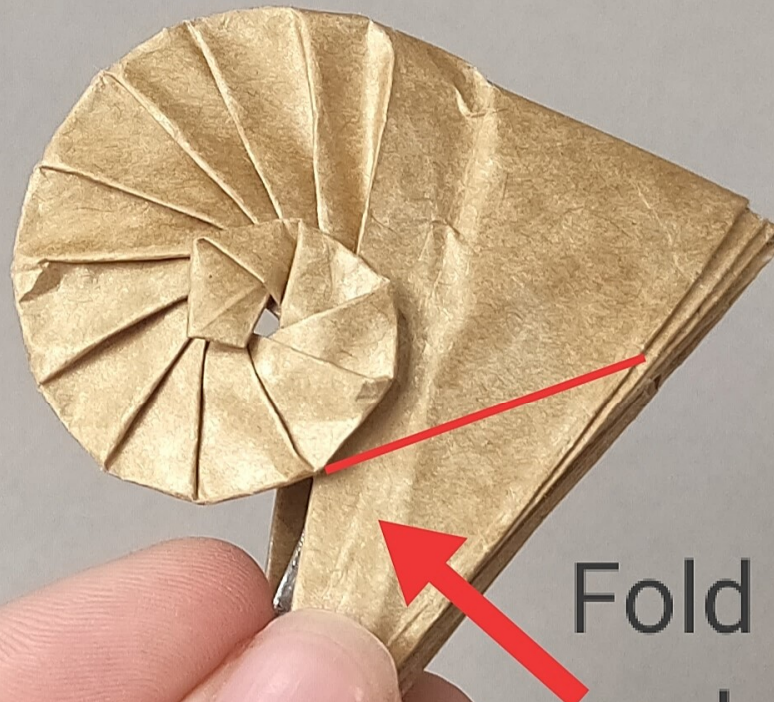

Crease to lock
it into place.

Now repeat on
the other side
and flatten

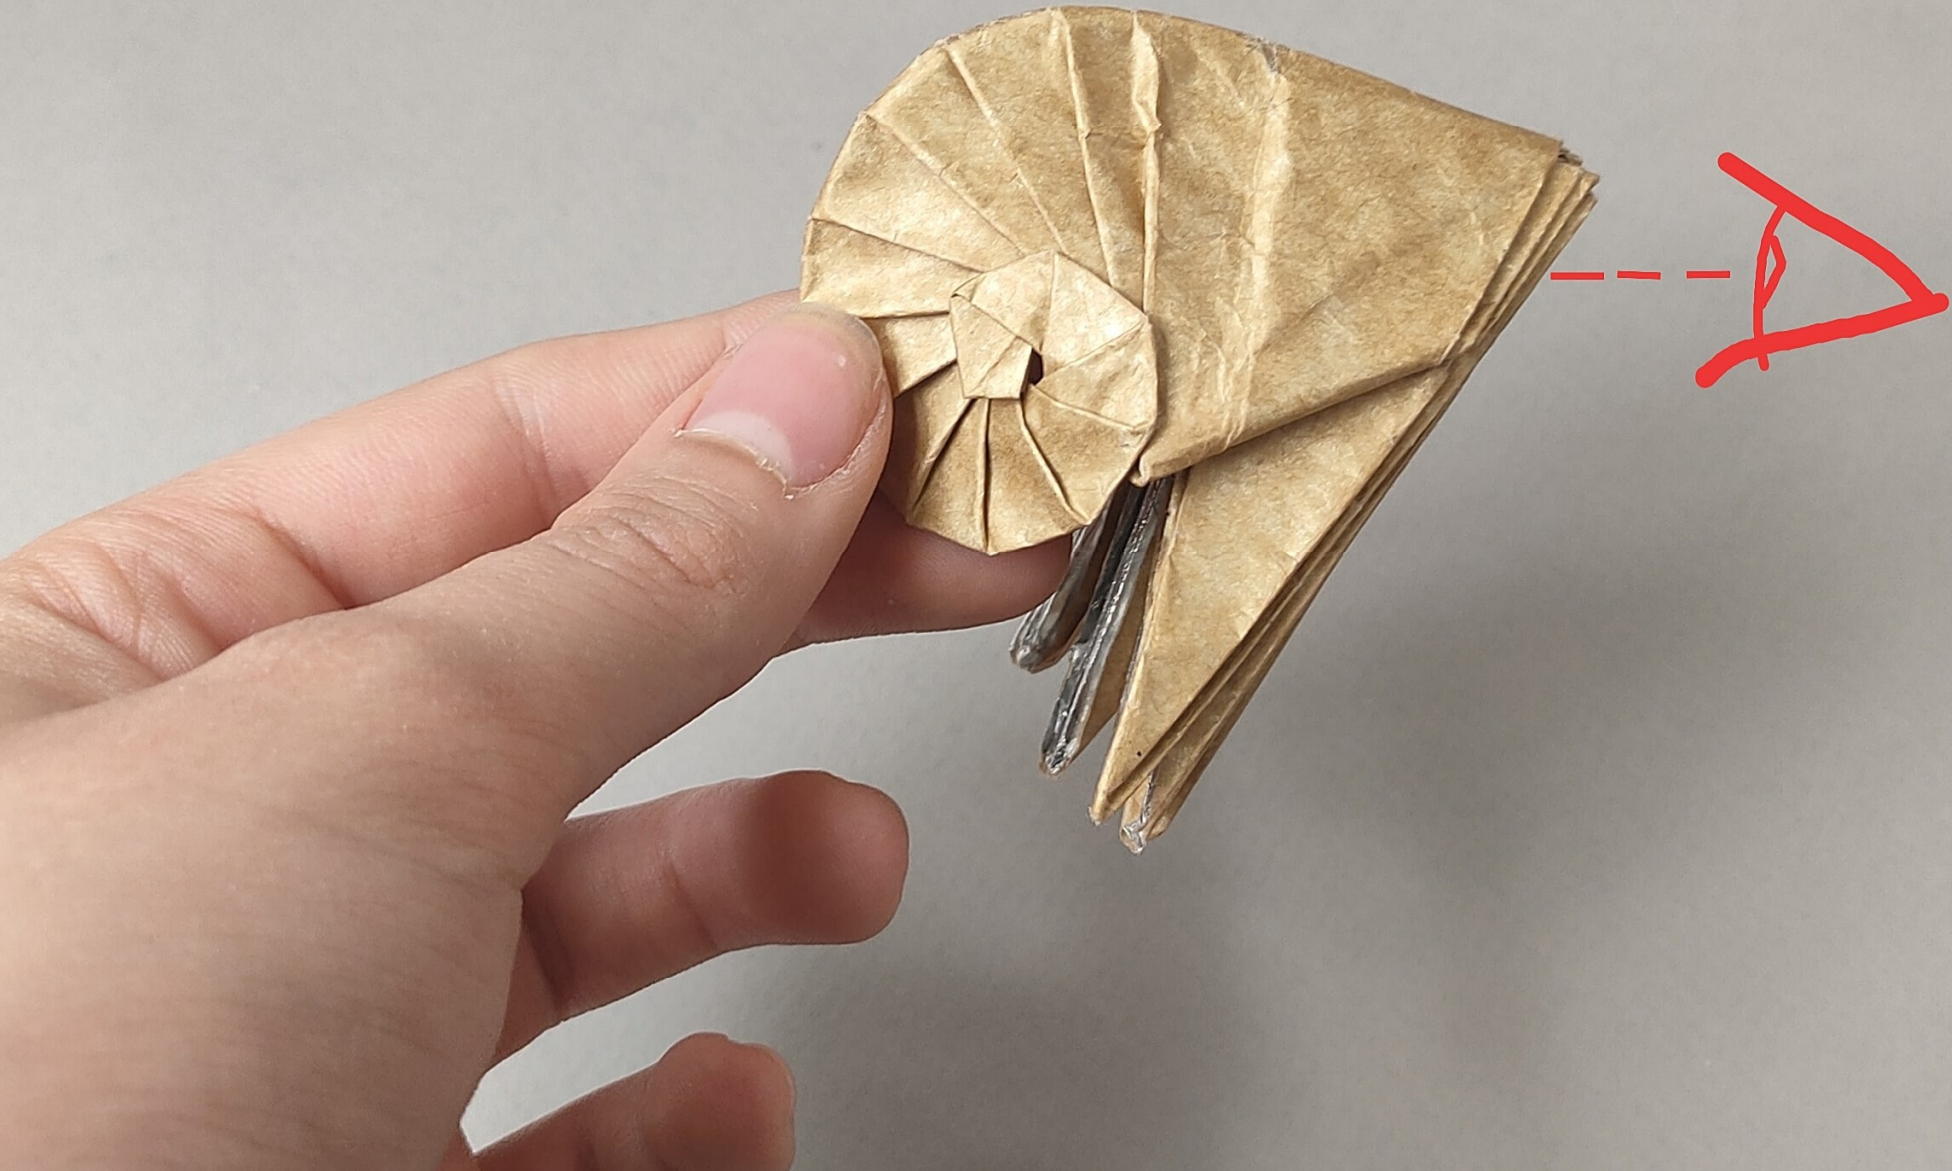

Nice!

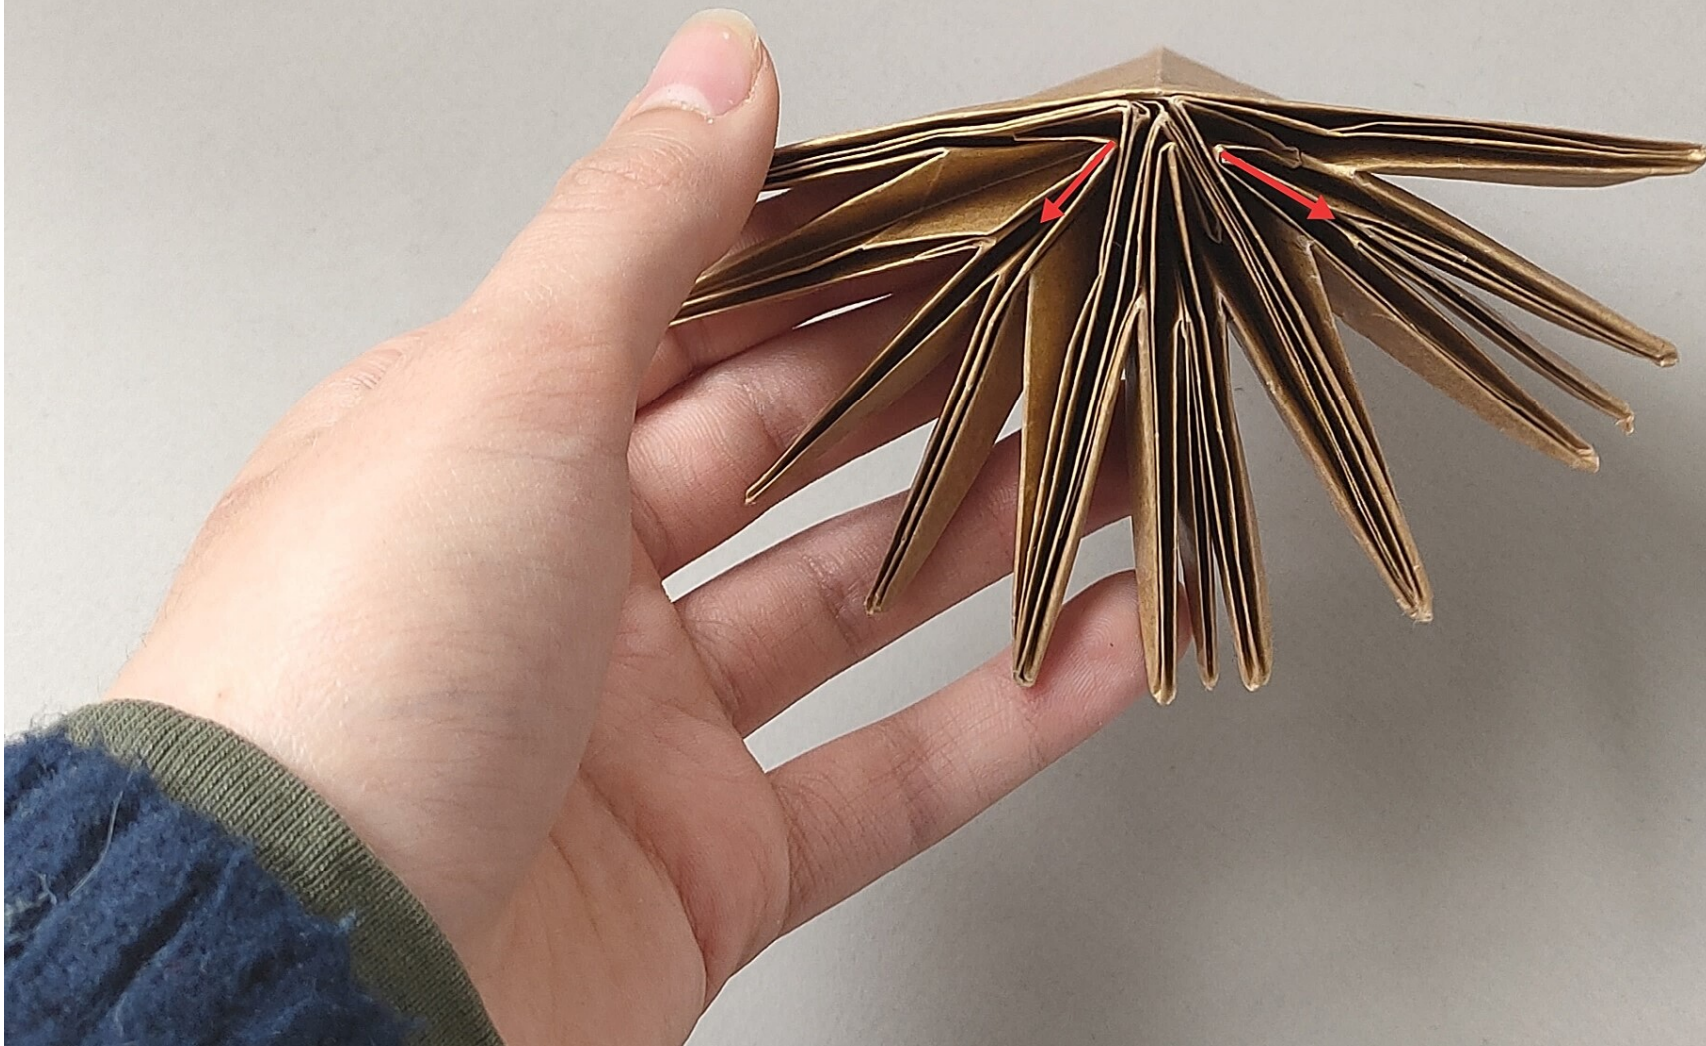

Fold this flap inside
and on the back

So close! View from the front

Tuck these two flaps
down into the thinnest
legs

Now try to pull out these
two flaps.

Fold as shown to make
the eyes

Pull out the legs...

Now shape to taste.

There's a total of
10 legs in this
model as some are
hidden inside.

Thanks for folding!
