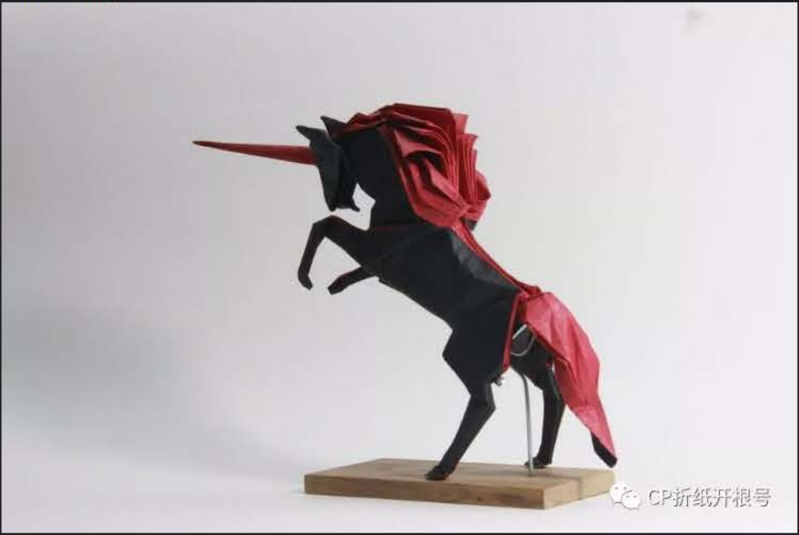
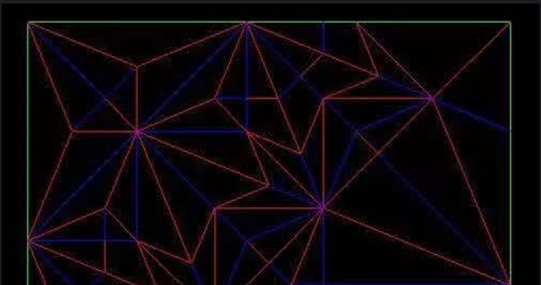
Origami Interactive Series NO.09 CP of the 42nd Unicorn

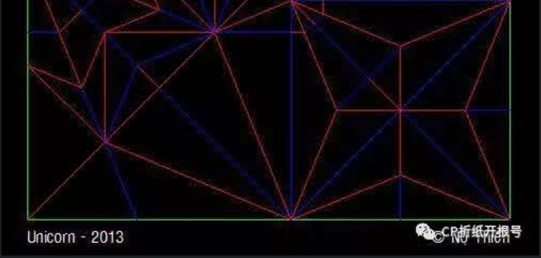
Origami students Takayama **CP origami opening** number2018-06-18

Today we are going to play with the origami of unicorns. There are many origami works about unicorn shapes. Among them, there are more than 10 well-known ones. There are also some CP works such as the one we will talk about below. Generally, the finished CP that looks beautiful and looks very simple, everyone must be very careful, because the possibility is that the author has hidden a lot of lines in CP and we need to make up our own brains, so let's challenge this issue!

The first step



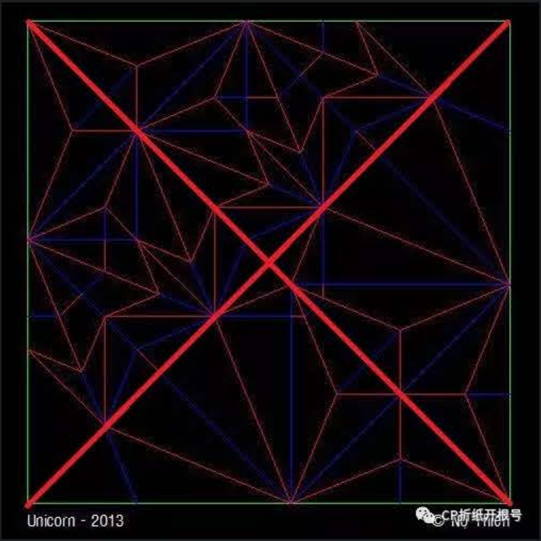




CP折纸开根号

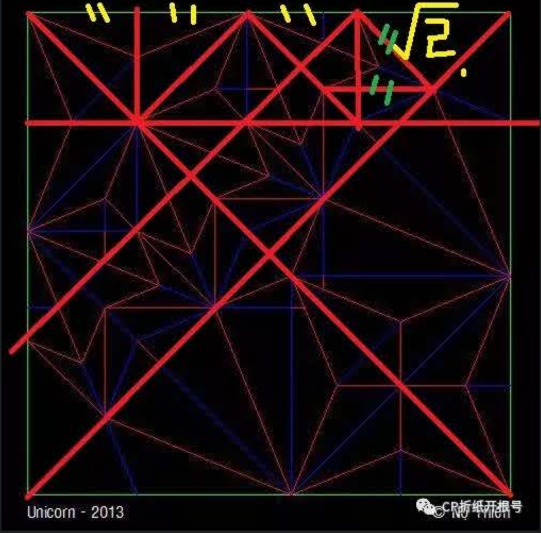
This is a CP with a background. Many lines have been hidden due to the color of the author himself. Friends who want to fold want to download the drawings and watch them with a computer.

The next step is to wire

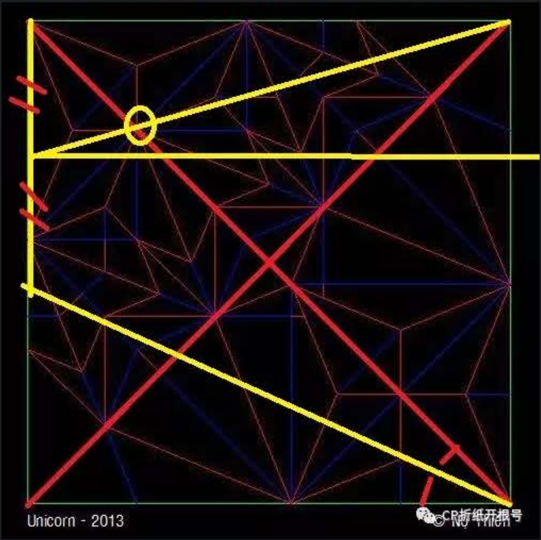


CP折纸开根号

First of all, we need to analyze and observe the drawing. As shown in the figure below, use the small square on the left to make some auxiliary lines to get the ratio of the edge is 3 + / 2 (3+ root number 2). When we arrived at the God Valley Flying Dragon, we talked about the 5 + 2/2 folding method. This time we will do 3 + / 2 again. Please take notes by yourself.



Below we use the line drawing method shown below to determine 1 of 3 + / 2



After getting the starting point, you can start wiring according to the following picture, because the original picture is poor in sharpness, so you have to look carefully.

CP折纸开根号

It should be said that the line of this drawing is very good, but it is very difficult to form the finished product.

Good luck here again!

Below I give a few process diagrams.

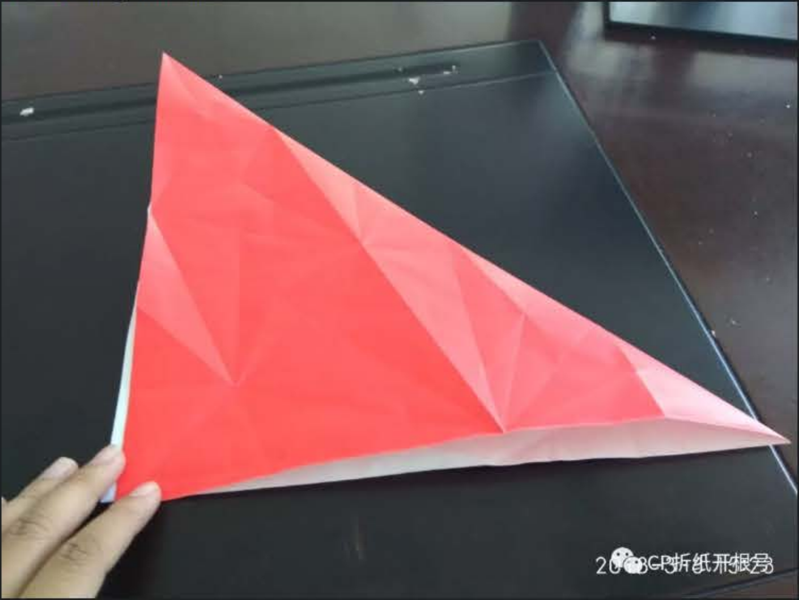
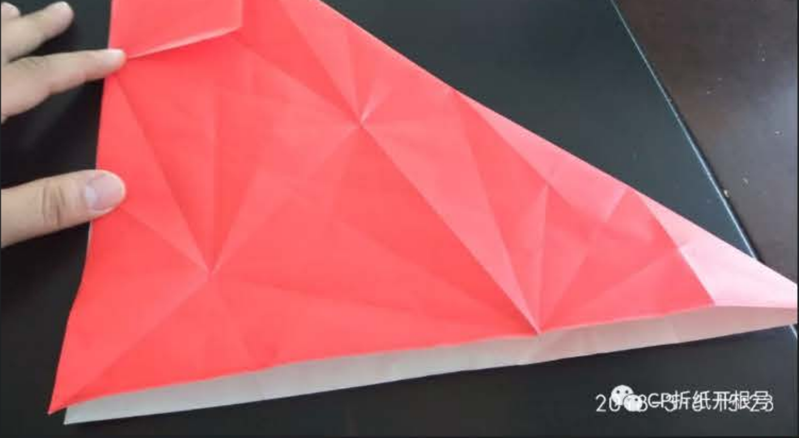
I believe that it is difficult for everyone to hit the line, and I believe that you have already done the line in about 30 minutes, so there is no advertisement, let's get together now!

First, the diagonal fold

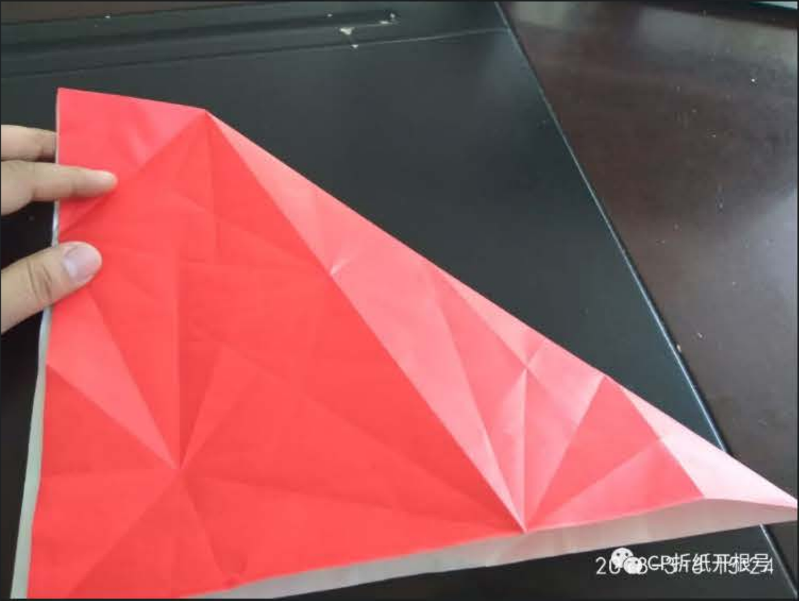


GP折纸开根号

Pull down the small square and fold it back

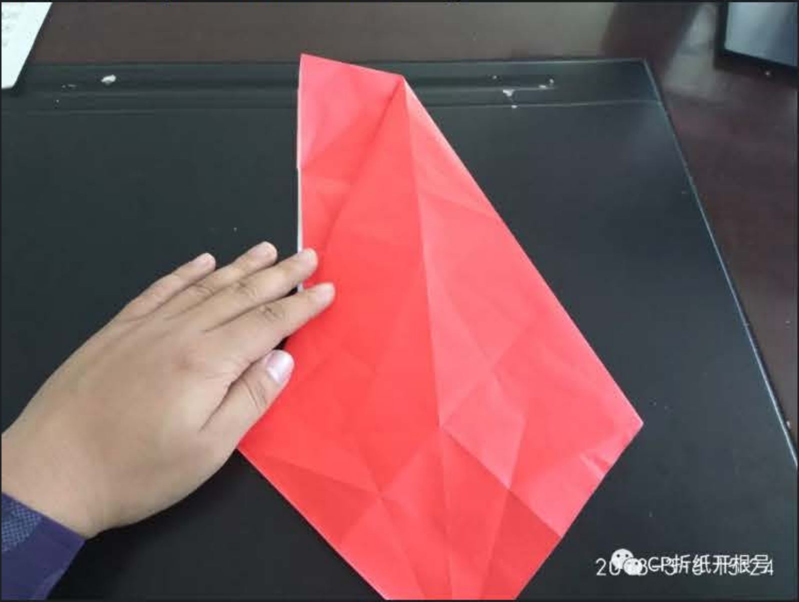


折纸开根号



折纸开根号

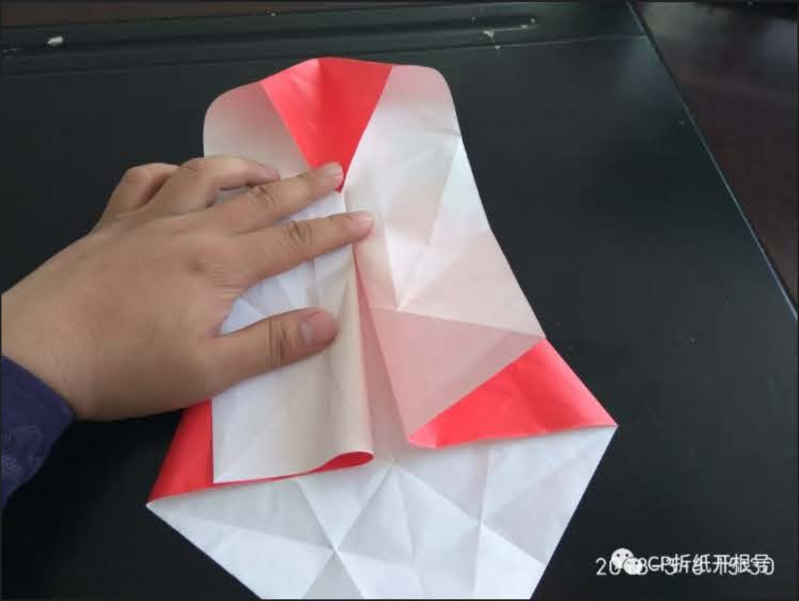
Below the small square, all flatten out at 22.5 degrees.

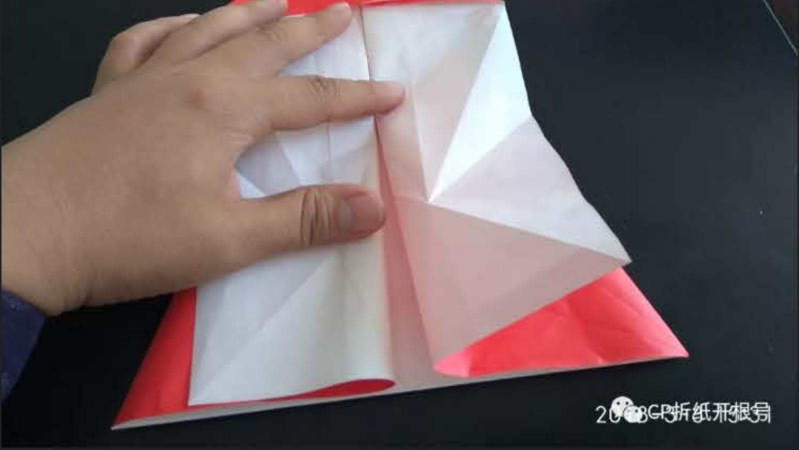


折纸开根号

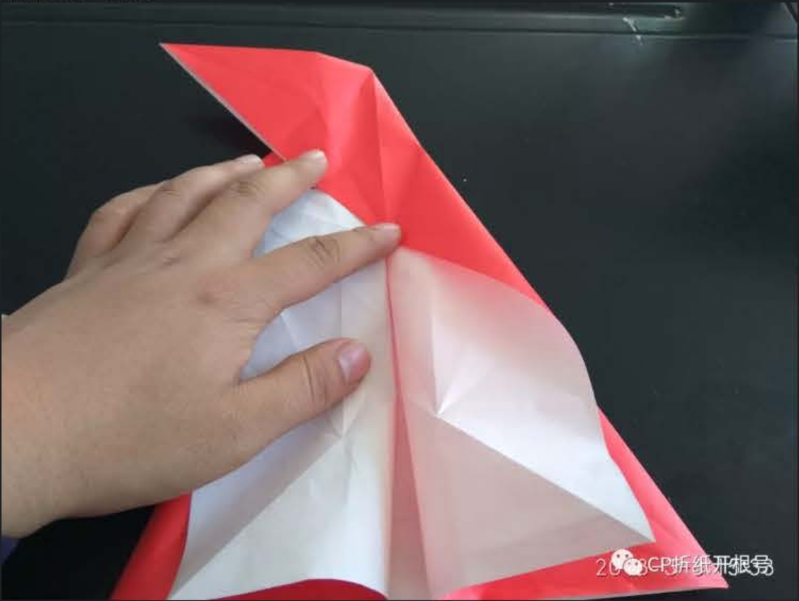
Flip

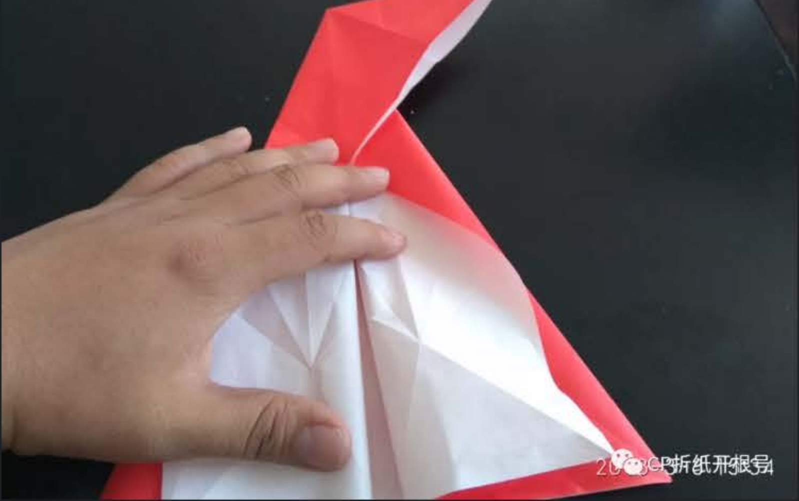
Pull open, gently flatten, and fold the triangle peak below

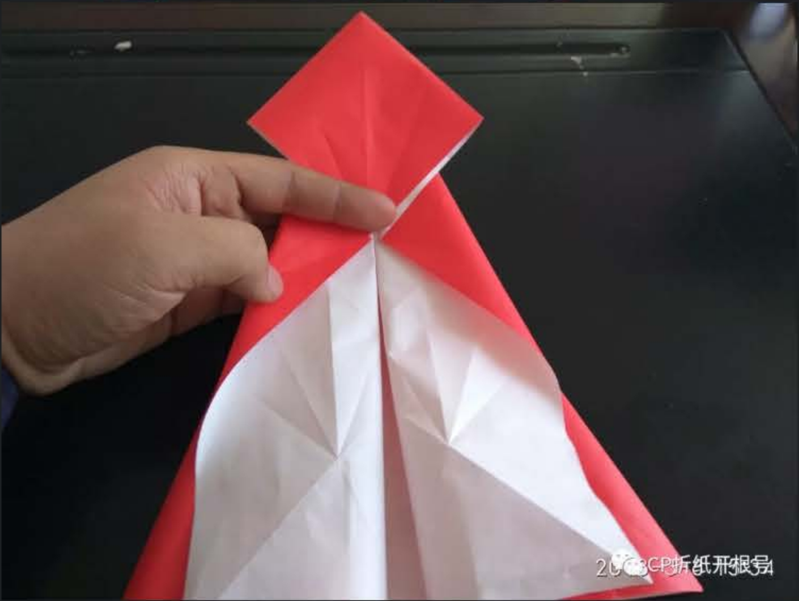


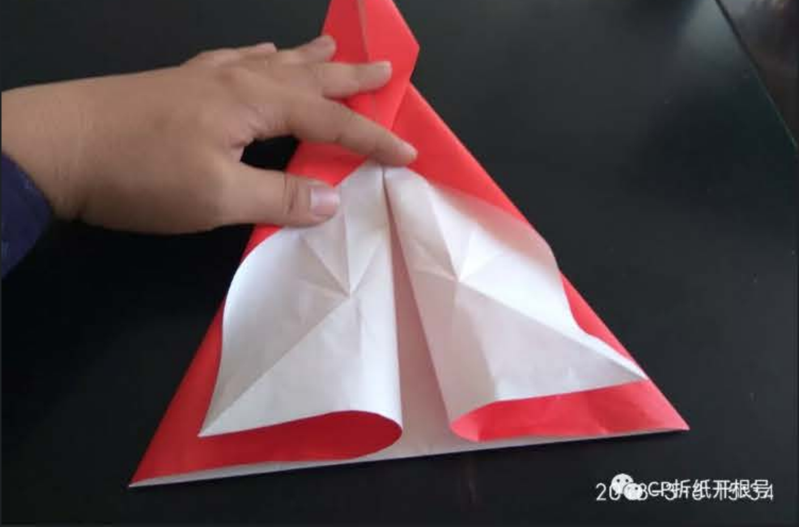


Adjust the angle



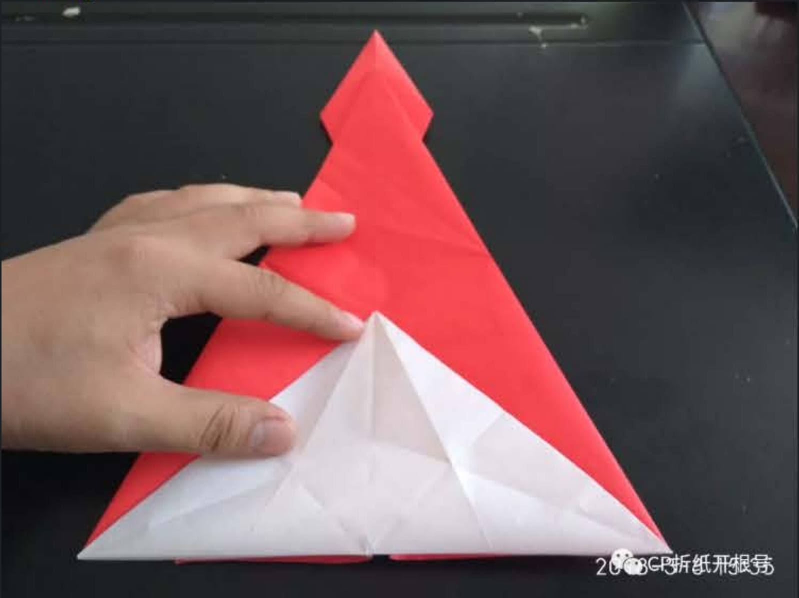






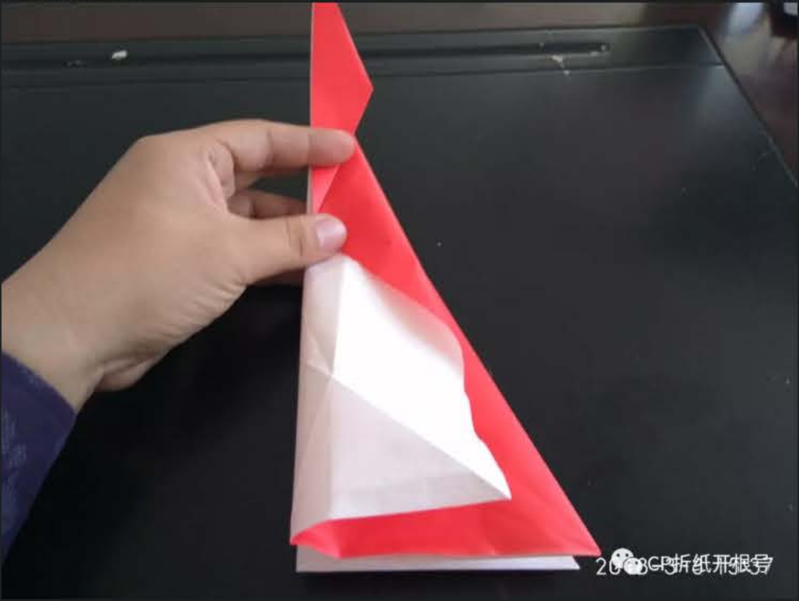
CP折纸开根号

Stereo flip



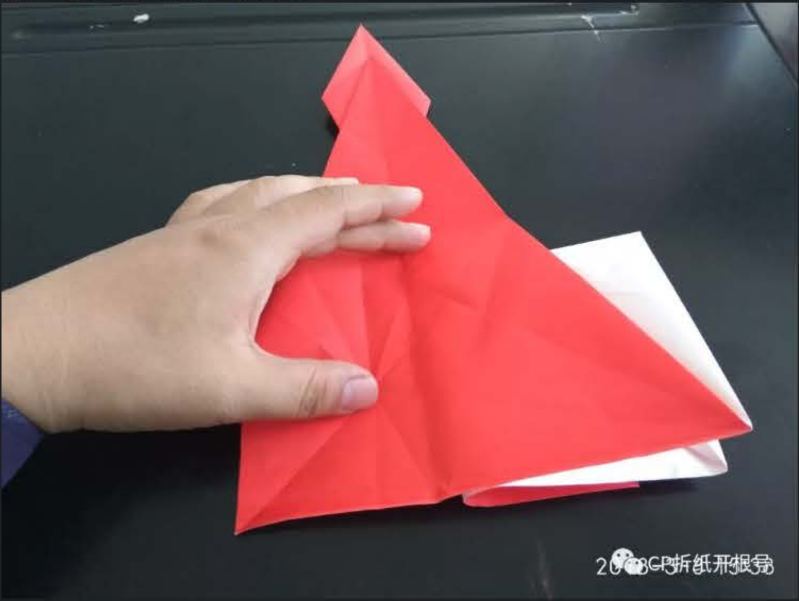
CP折纸开根号

Fold to the right

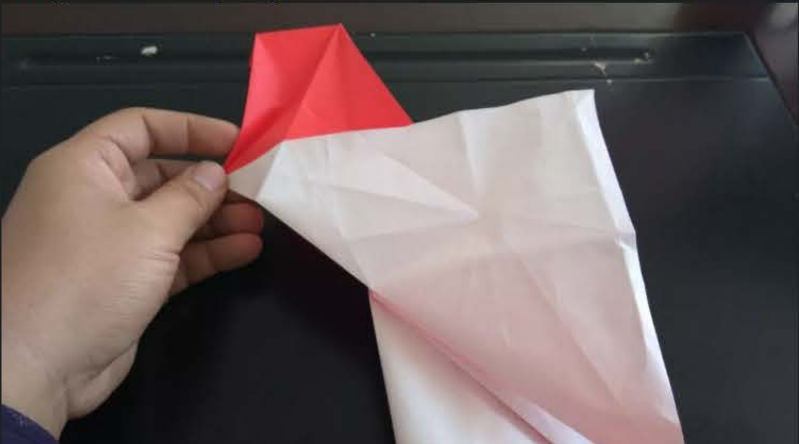


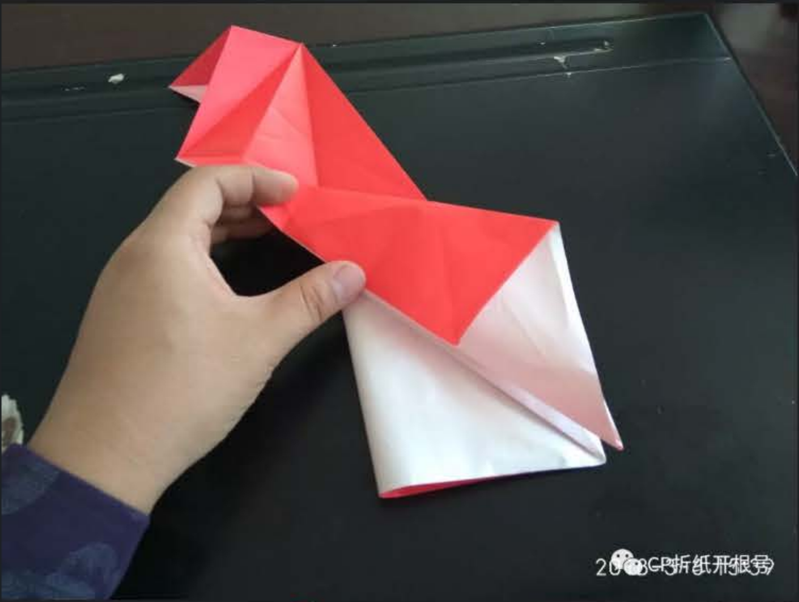
Pull the middle triangle up

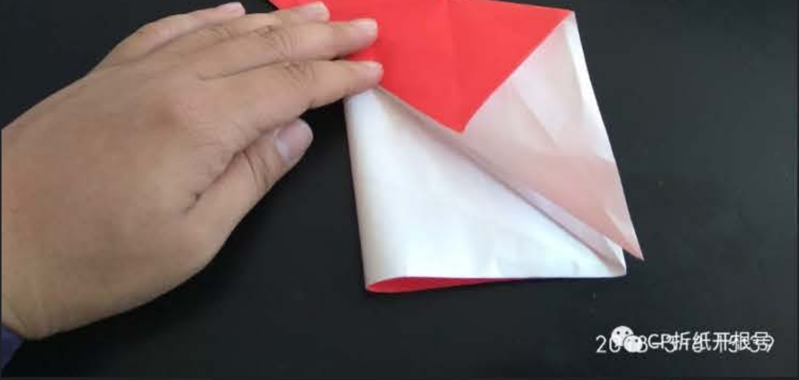
Flip the previous layer to the left

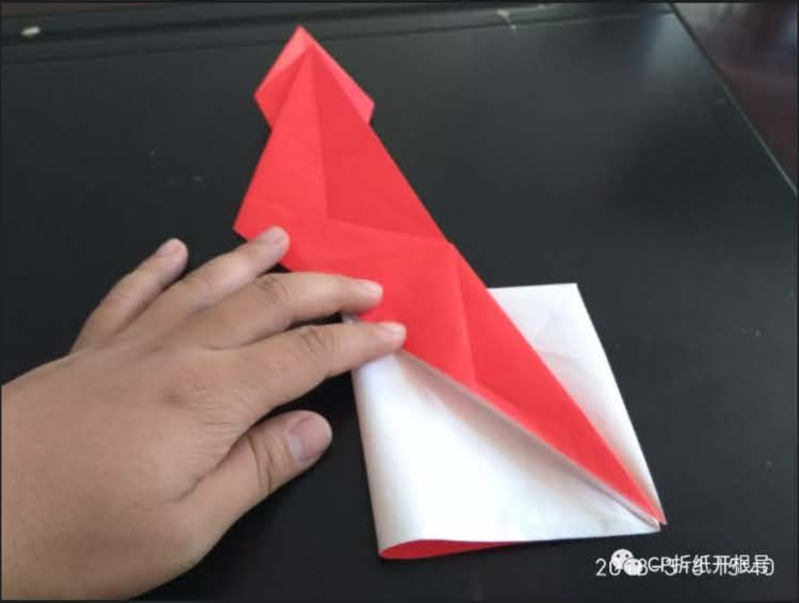


Pull right below for simple adjustments









Same adjustment on the other side

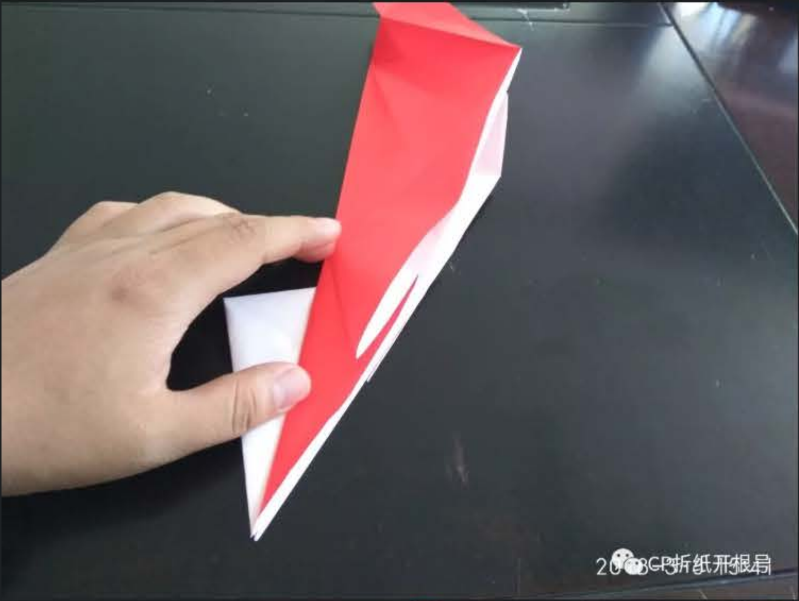
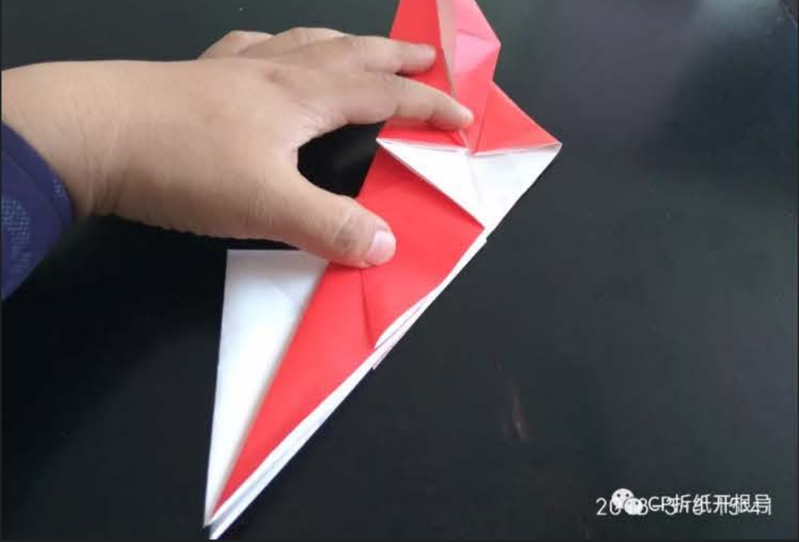
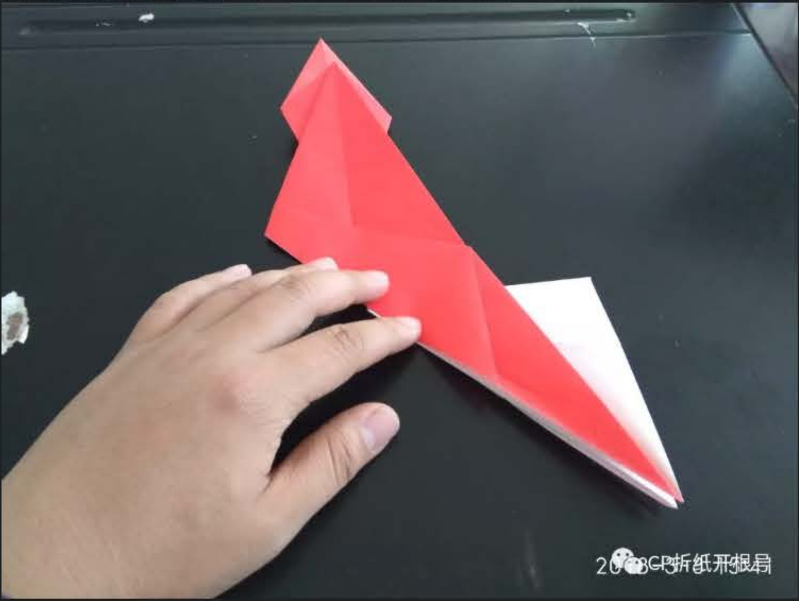
GP折纸开根号



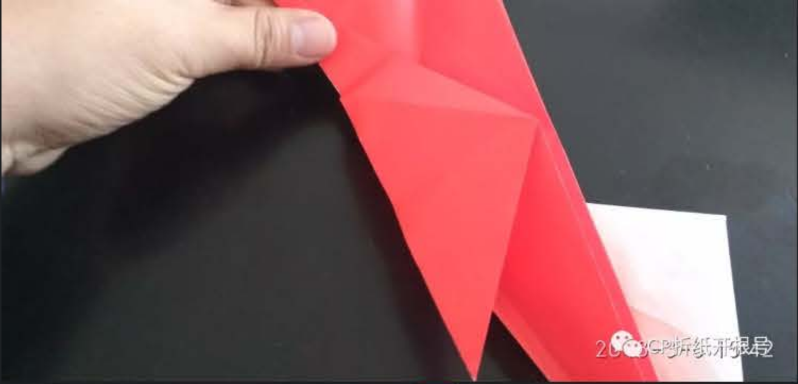
GP折纸开根号

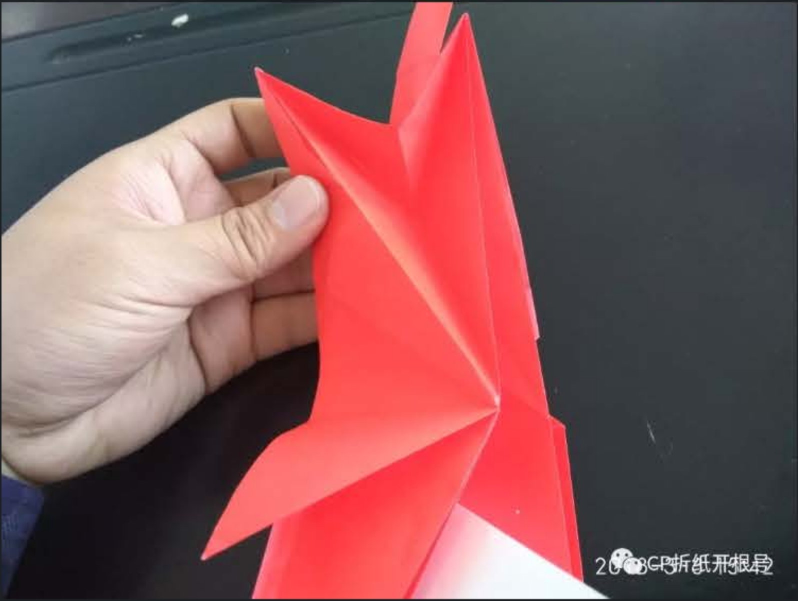


The following figure returns to the original perspective

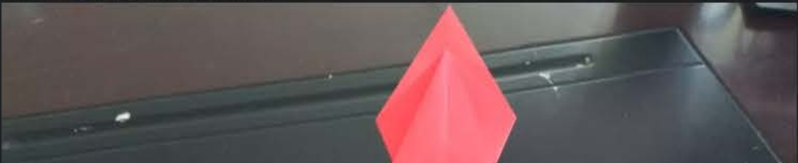


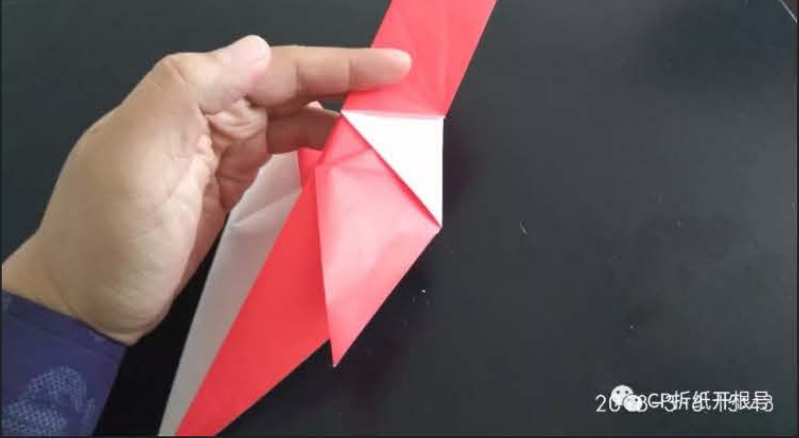
Gently pull the top half

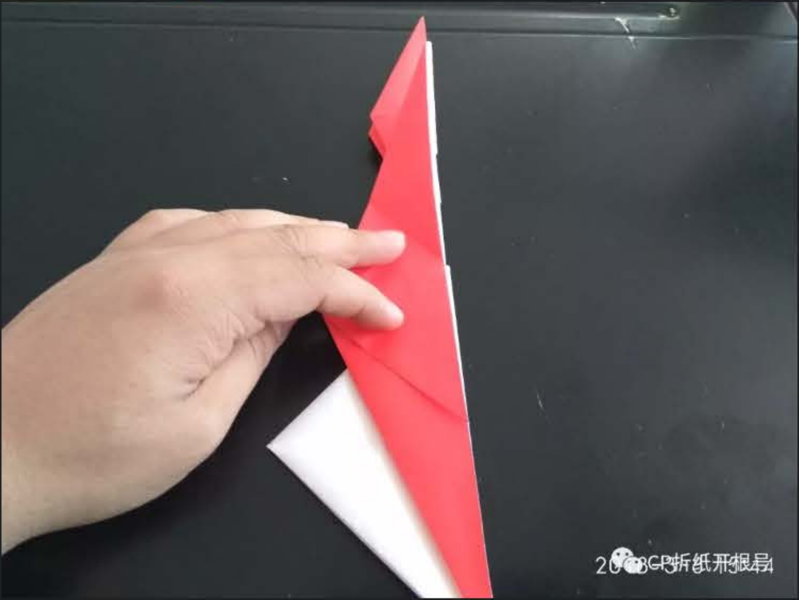




Same way with the other side







The following figure is the bottom view, you will see that there is a corner folded in the middle, so the whole can be flattened.

At this point all our aggregations are over! Do you have confidence in the plastic surgery of this work? Especially friends who leave me a message! ?
wish everyone

Today, I will add a few links from previous issues to see if they can be used.
